B10. Significance: Theme:

Architectural Development

Area:

Carmel by-the-Sea

Period of Significance:

1903-1940

Property Type: urban open space

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) Devendorf Park is significant under California Register criterion 1, in the area of history as a prime example of the product of Carmel's early community cooperation and commitment to public improvements. Originally known as "Blk 69", the one block square had been used as a temporary campground, and sometimes polo field. It was described as "a wind-swept waste, littered with papers and trash". However, in 1922 when outside developers proposed to purchase Carmel's sand dunes at the foot of Ocean Ave. as a site for a major hotel, a group of the village's leading residents, calling themselves the "Committee of 40" organized and brought the idea of acquiring the dunes for the City to Franklin Devendorf. Devendorf, with his partner Frank Powers, owned the Carmel Development Co., which held title to the land. Devendorf agreed with the "Committee of 40", and offered to sell the dunes, then valued at fifty thousand dollars, at a bargain price to the City of fifteen thousand dollars. Blk. 69 was included as added inducement for the sale. Renaming itself the "Save the Dunes Committee", and led by Perry Newberry, a successful campaign was conducted to persuade Carmel voters to approve the acquisition. While the dunes were saved for open space, little was done to develop Blk 69. It was used occasionally for special events, like the popular Sir-Cuss Days of the mid-1920s, but in general continued to be a mess. in 1928 Jimmy Hopper's wife Mattie began a one-woman campaign to create a park in Blk. 69. She was able to raise a thousand dollars by holding a "Spanish Fandango" ,where her Hispanic friends, many from Tortilla Flats, created a Mexican market w/authentic California-Mexican food. Local, Ken Lyman's orchestra supplied the music. The proposed park use was delayed while the city council debated using the land for a city hall or fire station. In 1930 newly elected councilwoman Clara Kellogg took up the cause, suggesting that the new park be named for Frank Devendorf.

B10. Contractor M.J. Murphy pledged a hundred yards of top soil for the project, and Dr. R.A. Kocher offered Carmel stone and benches. Well known local artist George Seideneck offered to design the walls and corners for the park. Carmel landscape architect Jane Deusner prepared a general plan for the landscaping and Jane Todd of Monterey selected the plant materials and did the planting. According to Carmel's Local History Librarian, Denise Sallee, "Because of her dedication to the project, Todd refused money, and donated her time and knowledge as a gift to the town". The Carmel Women's Club, Abalone League and local P.T.A. all threw in their support, and by 1932 the planting had begun. In April of 1932 a second attempt was made to locate a city hall on the park property. Before the issue could come to a vote, the Monterey Water Works, which held an easement "in perpetuity" over the disputed land, made it clear to the city fathers that the only acceptable use for Blk 69 was as parkland, because of their need to access their lines. While Devendorf Park was a product of broad community commitment, much of its leadership, and its original design team were women. Among them were Mattie Hopper and Clara Kellogg, Carmel landscape architect Jane Deusner, and Monterey's Jane Todd. Devendorf Park and its development clearly reflect the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Property Type:

fire station

Area: Carmel by-the-Sea Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Carmel Fire Station is significant under California Register criterion 1, in the area of history as the home of the Carmel by-the-Sea Fire Department. It is also significant under criteria 3, as an excellent example of civic architecture constructed with support of the Works Progress Administration during the Depression years of the 1930s.

A group of twenty citizens, led by Robert Leidig, established a volunteer fire department for Carmel in 1908. Equipment, consisting of buckets, shovels and sacks, were initially stored in a tent/shed at the SW cr. of San Carlos and 6th. The Citizen's Fire Protection Committee was formed in 1915 to raise funds for a proper fire engine and and permanent fire company. When the city was incorporated in 1916, the fire protection service became the responsibility of the city. In January of 1917, the Fire Protection Committee reported to the City Council that the Monterey County Water Works would lay six-inch drain pipes down Ocean Ave. to Monte Verde, then down Monte Verde to 12th, with necessary fire hydrants. In 1920, John Jordan, owner of the Pine Inn, donated the shed which housed McDonald's Dairy on 6th. between San Carlos and Dolores to store the fire company's Mack pumper. In 1935 a bond issue was passed by the residents of Carmel for a new fire house. The bond was for \$12,000, with a pledge from the W.P.A. for an additional \$9,046 for the new building. The building, and its 1974 engine bay addition, is still in operation as Carmel's fire house.

Local architect Milton Latham designed the utilitarian building in keeping with Carmel's building tradition of employing native materials, creative and eclectic design, with a high standard of craftsmanship. Local contractor M.J. Murphy worked with W.P.A. building supervisor Bernard Rountree on the project. Stone masons, Joseph Martin, Walter Barfield & Joe Lopez did the Carmel stone veneer. Carmel's most noted metalsmith, Francis Whitaker, fabricated the engine bay doors, and the interior hand rails. Begun in September 1936, the station was opened in June of 1937.

B10. The Carmel Fire Station projects a distinct and individual expression of community commitment not only to life safety in the community, but to the visual design character of Carmel as a whole. The building clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the themes of government, civic and social institutions, and architectural development.

B10. Significance: Theme: Period of Significance:

Economic Development, Gov't., Civic & 1903-1940

Property Type:

commercial bldg.

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Reardon Bldg. is significant under California Register criterion 1, in the area of Architecture as an excellent and early expression in Carmel of inventive commercial design for advertising and marketing. It is also significant as one of the key anchor buildings marking the gateway entry to Carmel's Downtown Historic District.

The Reardon Bldg, was named for the property owner, Thomas B. Reardon, Carmel's pioneer plumber, who arrived in 1906. Reardon was active in all phases of community life. He was a member of the Arts & Crafts Club, and the Forest Theater Society, where he performed in a number of plays, including the 1915 Serra Pageant. He was a founding member of the Manzanita Club, served on the 1915 Citizens Fire Protection Committee, and was one of the original members of the volunteer fire brigade. Reardon served on the City Council in 1919-1924, and was a founder of the Carmel Savings & Loan Assoc. in 1922. He was also a partner with Robert Leidig in a service station at the NE Cr. of 6th & San Carlos.

The Reardon estate hired local architect Guy O. Koepp to design the building bearing his name, for Carmel Dairy owner Earl Graft. Graft in turn hired the gifted artist Jo Mora to decorate the new enterprise. A Carlyle Stoney was to be the contractor. On June 17, 1932 the Carmel Pine Cone noted that "Jo Mora, Guy Koepp and the latest apparatus for delivering milk to the public. have combined to make the new home of the Carmel Dairy at Ocean and Mission probably the most unique institution of its kind in existance...from an artistic standpoint I doubt if it has an equal anywhere!" Koepp's incorporation of a milk bottle shaped tower as the exterior focal point of his otherwise Spanish Eclectic style commercial building, as noted in another early assessment of the stucture's aesthetic, " raised the humble bottle of milk to a pedestal of artistry."

☐ Continuation ☐ Update

P3. An earth-toned tile facing, added in 1953 runs around the base of the building. Several exterior light fixtures of Spanish design were added to the exterior of the building at that time as well. These changes have not compromised the original character of the building. It continues to play an important role as one of the two towered commercial buildings at the corner of Ocean & Mission that anchor the entry into Carmel's Downtown Historic District. The Reardon Building fronts Ocean Ave. and its heavily planted median divider on the south, and faces Devendorf Park to the east along Mission Ave., at the eastern edge of the village's urban core.

B10. Architect Koepp's generous arcaded display windows are in keeping with the Spanish Eclectic form of the building. Jo Mora's contribution to the overall decorative scheme was a series of three interior murals above the soda fountain, along the west wall of the interior, (no longer present). The artist, sculptor, illustrator and cartoonist showed animal figures in human dress, many recognizable as local Carmel residents, participating in the production and distribution of milk. Mora's characterizations also appeared on the fountain menus and the milk bottles themselves. All that remains of Mora's work is an original Carmel Dairy sign, painted on the exterior of the building along Mission St., which was designated an historical resource by the City of Carmel in 1996.

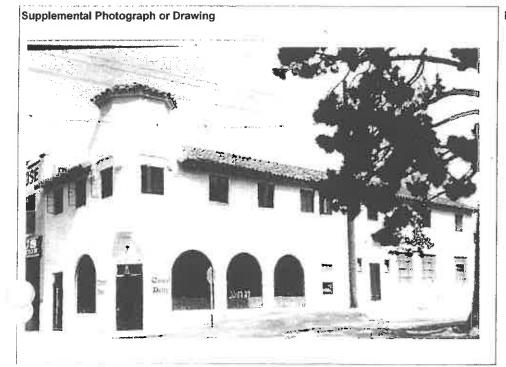

The comprehensive nature of the building design, interior and product decoration says a great deal about the seamless transfer of the creative and independent character of Carmel to its commercial promotion, even in the heart of the Great Depression.

The Carmel Dairy went out of business at the end of WWII, and the property was leased as a luncheon style soda fountain for several years. In 1953, Mr. Joe Bileci moved his popular Mediterranean Market into the space which it occupied under the Belici and the Coniglio family's ownership until recently. Between 1953 and 1955 Mr. Bileci added the exterior tile and lighting, and hired architect Francis Palms to remodel the rear of the shop, along Mission Street. Palms, for many years the preservation architect for the Monterey History and Art Association, was careful to maintain the historic character of the building in his sensitive remodel.

Architect Guy O. Koepp designed a number of residences and commercial buildings in Carmel from the early 1920s into the 1930s, including the Manzanita Clubhouse, Allen Knight Hse., Webb Hse, among others. Mr. Koepp moved to Los Angeles during WWII and died in Beverly Hills in 1959.

Mr. A Carlyle Stoney was a local contractor. Born in Beaver City, Utah in 1890. Trained as a mining engineer, Mr. Stoney worked a number of years for the Bingham Copper interests before relocating to Carmel in 1917 with his family. Stoney and four brothers worked for M.J. phy until 1925, when they established their own contracting & building company. During WWII A.C. worked as a purchasing agent for Henry J. Kaiser shipyards in Richmond, California. He died on a fishing trip to Utah in 1949.

chitect Francis Palms was born in Detroit, Michigan in 1910. He was educated at Williams College in Williamstown, Mass., and at the Univ. of Michigan, where he recieved his BA in architecture in 1933. He spent part of 1934 in Belgium and Germany researching apartment complexes under architect Oscar Pixis of Munich. He returned to the U.S. and worked variously in New York, Washington, DC, then opened his own office in Falls Church, VA. During WWII he worked for the War Production Board, then served as a Naval officer. He moved his practice to Monterey in 1952. Between that time and his death in 1995, he had executed 134 projects on the Monterey Peninsula. As preservation officer for the Monterey History and Art Assoc., he worked on Colton Hall, the French Consulate, the House of the Four Winds, and restored the Osio Rodriguez Adobe.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Goold Building qualifies under Criteria #3 as a significant example of the Spanish Colonial Revival and Monterey Colonial styles being combined at the central crossroads of San Carlos and Ocean Avenues in downtown Carmel. The recessed corner entrance and deep set display windows of the ground floor along with the white concrete walls are indicative of the Spanish designs by Blaine and Olson in the Kocher Building (1927), El Paseo (1927) and La Ribera (1929) the Cypress Inn. The overhanging southwest corner balcony on extended curved "Vega" type beams is derived from the Larkin House (1834) in Monterey, and was a design trademark of builder M. J. Murphy. Low arches springing from faux wooden corbels articulate the upstairs apartment (now offices) from the first floor commercial shops. The pattern is found on the south and west elevations, and was utilized again on the northern addition in 1988. The Spanish Colonial Revival Style dominated the commercial deisgn of Carmel-by-the-Sea from 1925 to 1935. The style was featured in Santa Barbara and was the style for homes built in Pebble Beach under the control of Samuel F. B. Morse. The Goold family was integral with the commercial development of downtown Carmel,

CHARLES O GOOLD

Charles O. Goold was among the most progressive leaders in the city council of Carmel-by-the-Sea and was always interesting as a pioneer of the sort who contributed something definite in assisting California to emerge from her pioneer state. Goold was born on a farm in Henry County, Illinois on November 28, 1871, the son of Horace and Hannah (Gard) (See Continuation Sheet)

Continuation Update

B 6. Construction History (Continued from Page 2)

2. 1988. Second story addition mimicking details of original design added to one story commercial building.

B 12. References (Continued from Page 2)

3. Hale, Sharon, "A Tribute to Yesterday," Valley Press. Charles Goold and Mary Machado, pgs. 12-15

4. Tober, Jackie, Carmel Historic Survey 1993, Research Form

B 10. Significance (Continued from Page 2)

Goold, the former a native of Vermont and the latter of Ohio. Charles Goold was married to Miss Mary Machado, a native of the Carmel Mission. They had two children, a son Kenneth who was graduated from Monterey Union high school in 1924, and a daughter Irene. interested in politics and recognizing the duties and obligations as well as the privileges of citizenship. Charles was always ready to do his part for the public welfare. He was elected city trustee of Carmel in April 1924 and made commissioner of streets. He was public-spirited to a high degree, and second to no one in his hearty support of whatever might prove to be best from Carmel.

The original spacious upstairs apartment was inhabited by members of the Goold family for many years. The rooms were turned into offices in the 1970s and a portion was the home of the Pine Cone until recently.

In the later 1980s a second story addition was added on the north end of the Goold building that purposely mimicked the Spanish details of the 1935 structure. The Goold Building meets the criteria under architectural, economic, and historical development as set forth in the Historic Context Statement (1997)

P3. Description (Continued from Page 1)

In 1988, a second story was added to a one story rectangular addition on the north end of the lot. The details were purposely created to mirric the original building on the south, creating a continuous design. The recessed door at the corner, a north facing covered stainwell with Moorish tile risers and wrought iron gate, and a Monterey style balcony only on the west elevation are the details taken directly from the earlier building.

Period of Significance:

1903-1940

Property Type: commercial

Applicable Criteria: CR 1.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Carmel Development Co. Bldg. is significant under California Register criterion 1, in the area of history as the first and oldest commercial business block in Carmel by-the-Sea. It is significant under criterion 3, in the area of architecture for its method of construction, as the first "fireproof" concrete block building in Carmel.

Constructed in 1902-1903, the three bay commercial block originally housed the Carmel Development Co. of Frank Powers & Franklin Devendorf, the T.A. Work Hardware Store, and the Poeble Grocery, lined up from west to east, respectively. The grocery store continued in that capacity until 1973, under at least three separate ownerships. The middle shop housed at least three hardware stores, over time, and the shop at the west end is the oldest drug store in Carmel. Originally called the Palace Drug Store, the Carmel Drug Store has operated under that name since 1910, and still maintains its historic interior, much as it looked in the 1920s.

The building housing the three business spaces is constructed of hollow core cement block, w/a "rock face whole block pattern" in a running bond. It may have been fabricated w/a Wizard Face Down Concrete Block Machine, sold by the Sears Roebuck & Co. prior to 1910 for \$42.50. It was probably the same machine used by hardware store owner T.A. Work to build his own commercial block, on the north side of Lighthouse Ave., between Grand and Forest Aves. in Pacific Grove, between 1905 & 1906. The "Fireproof" building presented three identical shop fronts to the street, large plate glass affairs w/recessed central entries, tied togather by a continuous ribbon of small, fixed transom lights, above the bays. Artie Bowen has been identified as one of the original builders. The original signage was gold lettered on the plate glass, at the same viewing level for each storefront (see photo cont. sheet). According to available historic photographs, cloth awnings and their mechanical aparatus appeared on the building in the early 1920s, to shade the display windows from the direct southern afternoon light. Cloth awnings are present today.

□ Continuation □ Update

B6. three display windows added along San Carlos St. elevation 1996 (Cbp #96-20)

B10. The most noticeable change in the original building are three fixed display windows, cut into the east side elevation in 1989, and the replacement of the veneering of the storefront bases w/black marble panels on the Carmel Drug Store, cobblestone in the middle bay, and wood paneling on the Dansk storefront. Otherwise, the building looks much as it did when constructed in 1902-1903. The Carmel Drug Store on the west has maintained its current facade, signage and interior since the 1920s, including the oldest example of exterior electric lighting in Carmel, acquiring historic significance in its own right as the oldest pharmacy in Carmel operating out of its original location. This listing only includes the original footprint of the 1902-1903 concrete block building. The Carmel Development Co. Building is a very significant structure in Carmel's downtown commercial core. It qualifies for inclusion in the historic survey under California Register criterion 1 in the area of history, due to its age, association with the founders of the community, and its importance to the economic development of early Carmel. It also qualifies under criterion 3 in the area of architecture, due to its unusual method of construction. The Carmel Development Co. Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Wetzel Bldg. is significant under California Register criteria 1, in the area of history as the site of Courtland J. Arne's barber shop, where in October 1916 fifty-four Carmel residents signed the incorporation petition that would result in establishing the City of Carmel-by-the-Sea. It is also significant under criteria 3, in the area of architecture as a good example of the Spanish Eclectic style, and the only known commercial building designed and constructed by noted Carmel designer-builder, Frederick Bigland. C.J. Arne was Carmel's first barber. His shop (a tent) was originally on Lot 5 of Blk 71. According to Sharron Hale, In early October of 1916, "everyone jammed all together like cattle" at Court Arne's barber shop to sign an incorporation petition. The list of names of the original signers can be found on page 81 of Hale's book, A Tribute to Yesterday. In 1923, property owner Bernard Wetzel moved the barber shop 10 feet west of its original location, to allow space for the new Bank of Carmel. Wetzel replaced Arne's tent with a board-and-batten building. Wetzel is best remembered as the co-owner of the Carmel Bakery, which replaced the Schweniger Bakery when the Schweniger's were killed in an automobile accident. Wetzel was also involved in Carmel real estate. The 1923 facility also housed the shoeshine stand of African-American Rutherford Hayes Walker, a native of Alabama who had come to the Monterey Peninsula in 1906 as a chef for the Centrella Hotel and Hotel Del Mar in Pacific Grove, before relocating to Carmel. In 1928 M.J. Hairs founded Merle's Treasure Chest in the building, which was redesigned at that time by noted Carmel contractor Frederick Bigland into a Spanish Eclectic style commercial building.

Frederick Bigland arrived in Carmel from England in the early 1920s, seeking relief from asthma. He brought with him the design and building techniques of the English Arts and Crafts tradition. His early work in Carmel reflected the English Tudor revival, some with the storybook detailing that Carmel was known for in that era. His own home, 2 SE of Santa fe on the SW side of Mtn.

View, built in 1926 reflects this aesthetic.

The Bank of Carmel qualifies under Criteria #3 of the California R Style building in Carmel-by-the-Sea; 2. It was designed by C. J. R relief carvings depicting Junipero Serra by artist Paul Whitman and 1938 until 1972 when it was converted into a series of commercial have been altered, but could be restored to their original appearar financier and philanthropist, and T. A. Work. C. J. Ryland was born in 1893 in Stockton, CA. He was a residen	egister as significant because: 1. It is the only 1930s Art Deco yland, who also designed the original Sunset Auditorium; 3. The base still intact. The building served as a commercial bank from all shops. The original south facing entrance and west elevation nice. The original bank was founded by Barnet Siegel, prominent
he built the City Hall and Library. He was both an architect and en Oakland.	gineer whose work extended to Santa Cruz, San Jose and

Paul Whitman was an accomplished and versatile artist who played an active role in the arts community of the Monterey Peninsula for 24 years. A founding member of the Carmel Art Association, Whitman worked in a wide variety of media that included etching, charcoal drawing, watercolor, oil, lithography, and sculpture. Whitman was born in Denver, CO in 1897, although his family later settled in St. Louis, MO. At a young age Whitman became interested in art and took up drawing in his teens. He attended an East Coast preparatory school, intending to continue his education at Yale University. However, with the entry of the United States into World War I, he set aside his plans in order to join the armed forces in Europe. Upon his return to civilian life in 1921, Whitman joined his stepfather's insurance business in St. Louis. Later that year he married Anita (See Continuation Sheet)

B. 10. Significance (Continued from Page 2)

Moll, and by 1928 their three children, Colden, Ann and Paul had been born. While several sketchbooks survive from Whitman's army days, during his twenties he had little time to devote to art. Despite this, his interest in being an artist persisted.

In 1926 Whitman made a major change in his life when, at the age of 29, he moved to Carmel to pursue his dream of becoming an artist. By the time Whitman arrived, the Monterey Peninsula was home to an unprecedented number of talent artists, including William Ritschel, E. Charlton Fortune, Armin Hansen, Gottardo Piazzoni, August Gay, Paul Dougherty, Francis McComas, Mary DeNeale Morgan, Charles Rollo Peters, and Percy Gray. Life on the Central Coast was relatively cheap, the climate mild, and its inhabitants tolerant toward artists. Monterey also offered the presence of the Hotel Del Monte, a noted venue for art exhibitions, where artists could sell works to the hotel's wealthy clientele. And most importantly, the area was famous for its breathtaking scenery, which drew visitors from around the world.

Shortly after his arrival in Carmel, Whitman began to study etching with Armin Hansen (1886-1957), a native San Franciscan who relocated to Monterey in 1918. Primarily a painter of maritime scenes, Hansen had taken up etching in 1910 during his studies in Europe. By 1926, he was widely recognized for his mastery of this art, winning medals in competitions of national and international scope. Hansen was a patient and highly regarded teacher known to encourage and inspire his many students without imposing rigid formulas.

Like Hansen, Whitman frequently depicted waterfront life in his etchings, as in *Monterey Waterfront* from 1928. However, this detailed depiction of rickety shacks perched unsteadily over the bay seems unlikely to have appealed to Hansen. While Hansen tended to focus on the human activity of the waterfront, Whitman gravitated toward intricate scenes of piers and wharves that challenged his considerable drawing skills. His images depict the wharf's buildings, their wooden pilings echoed in the water below, or skiffs hanging suspended from ropes and pulleys, poised above the waters of the bay. Unlike his teacher, whose etchings capture the bustle of wharf activity, Whitman's etchings evoke a mood of quiet reflection.

By 1928, Whitman was beginning to gain notice in the art world. He exhibited as a member of the California Society of Etchers and received prize from the International Society of Etchers for his piece *Linemen*. Whitman also began to work in watercolor, and in 1929 the Smithsonian institution hosted an exhibition of his work that included both etchings and watercolors.

While a number of regional artists depicted the realities of urbanization that were a major factor of American life in the 1930s, others, like Whitman, concentrated on the rural landscape. No matter the subject, his watercolors have in common a lyrical stillness, as horses graze timeless landscapes, cypresses stand silent watch along the coast, and figures pause in contemplation. Again and again, Whitman found inspiration in three-shaded barns and scenes of farm life such as hay making and fieldwork

B. 10. Significance (Continued from Page 3)

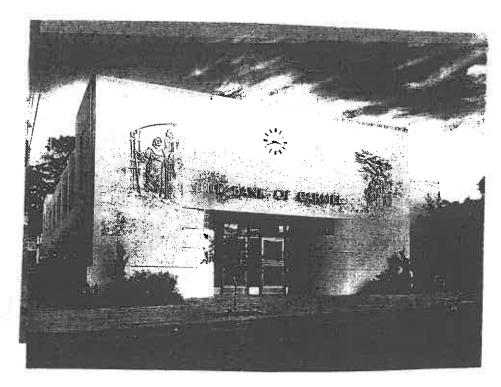

Late in 1937, Whitman traveled to Guaternala. There, influenced by the glowing colors and bright sunlight, he created some of his strongest watercolors. His simple scenes of people going about their daily lives - getting a haircut, going to church, selling their wares - are vibrant and dynamic. In Selling Hats, Guatemala, 1938, a street seller holds a straw hat toward two men, a sea of similar hats lying at their feet. The hats and the men's white cotton trousers glow against the shadowed street beyond. Through Whitman's eyes, an ordinary street scene is transformed into an image of timeless beauty.

Prior to his Guaternalan trip, Whitman had collaborated with his friend Armin Hansen on a series of murals for the Hotel Del Monte. Painted on canvas, these murals were removed from the former hotel and are now in the collection of the Monterey Museum of Art. Whitman's interest in exploring new media also led him to work on a number of wooden sculptures, most of which now belong to members of his family. One public work consists of a pair of bas reliefs created for the imposing facade of the new Bank of Carmel building in the 1930s. Although now partially hidden by trees, the reliefs can still be seen on the front of the building located in Carmel at the corner of Ocean and Dolores.

Whitman's career, like that of many of his compatriots, was disrupted during the war years. From 1942 to 1945 Whitman served with the U.S. Army Crops of Engineers in San Francisco using his talents as an artist to help create effective camouflage. During this period, his work sometimes took him north to the rural area around Santa Rosa where he kept his hand in by painting some of the barns that dotted the countryside.

After the war Whitman returned thankfully to his art. It was during this later period that Whitman painted his finest watercolor, Coast and Cypress, 1946, an enormous and beautifully executed painting of cypresses, their twisted limbs framing a view of sea and sky. In the last years of his life, Whitman worked as a consultant to the State Department of Education and created a large oil painting for Abercrombie and Fitch. He also received commissions to illustrate two books, one by Pulitzer Prize winning author and fellow Pebble Beach resident, Martin Flavin. Whitman was working on the illustrations for another book when he died suddenly at the age of fifty-three.

The closely-knit arts community mourned Whitman's untimely death in 1950 and publicly memorialized him as an unselfconsciously endearing man with great heat and a strong interest in helping others. Whitman's paintings are held in many private collections, and, thanks to the interest of his family, his prints are included in the permanent collections of the Monterey Museum of Art, and the Fine Arts Museums of San Francisco. Additional works are held in the collections of Stanford University and the California State Library, Sacramento. Whitman and Hansen's murals were the focus of a 1974 exhibitions at Monterey Museum of Art, and, more recently, Whitman's prints were featured in a 1997 exhibition at the Carmel Art Association.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Fee Building qualifies under California Register criteria #3 as an excellent example of the Spanish Colonial Revival Style designed by noted Carmel builder M. J. Murphy in downtown Carmel in 1936. The style became prominent in California in the 1920s with the rebuilding of downtown Santa Barbara by George Washington Smith and Carlton Winslow Sr. after a disastrous earthquake. Samuel F. B. Morse dictated the style for houses built in Pebble Beach, and the style was used prominently in downtown Carmel in the late 1920s, particularly on Dolores Street between Ocean and 7th, and on Ocean Avenue itself.

The style lent itself to seismic-building techniques involving reinforced concrete construction that suggested whiteweshed masonry walls. Architects who perfected the style in Carmel were Blaine and Olsen of San Francisco, Guy Koepp Percy Parkes and C. J. Ryland of Carmel, and H. H. Winner of San Francisco. Deep set casement windows, arcaded elevations, tiled roofs, Moorish inlaid tiles, and particularly wrought iron window grills, railings and gates produced by local craftsman Fred Leppert and Frances Whitaker are typical design elements. M. J. Murphy utilized a variety of styles in his work and the Fee building is a testament to his absorbing the design elements of the Spanish Colonial Revival with great sophistication.

M. J. Murphy

Michael J. Murphy was a pioneer builder and contractor in the earliest era of Carmel, and therefore helped to shape the entire architectural character of the village. He was born in Minden, Utah, in 1884 of hardworking parents of limited means. Young Murphy managed to finish high school, but then had to begin to earn a living as a house painter. In 1902, he visited Carmel and became attracted to the area. He married in 1904 and returned to Carmel to live. His son Frank was "the first white boy child" to be born in Carmel." B. 10 Significance (Continued from Page 2)

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

At the same time, Franklin Devendorf of the Carmel Development Company had purchased much of the land in Carmel, and began to subdivide and sell the parcels. Devendorf knew Murphy and had taken a liking to him. Therefore, when he needed more houses for his lots to satisfy his prospective buyers, he helped Murphy set up a construction business. Because of his passion to be the best, Murphy went to great lengths to make certain that his structures were solidly built of quality materials. As his reputation in this regard blossomed, more and more people wanted a Murphy house. Murphy obliged and built houses all over the Monterey Peninsula, using his own designs and doing much of the work himself. In 1914, Murphy established his own contracting business, opened up a lumber and building supply store and hired many workers.

To assure a supply of crushed rock and gravel, Murphy erected a rock crusher in Carmel Valley. He obtained his rock from the shore of the Pacific Ocean and his gravel from the Carmel River. His team of horses and his wagons became a familiar sight in the area. People turned to him for assistance when they needed help. When the surf piled up the sand and blocked the mouth of the river causing the water to back up and flood the artichoke fields, the farmers called on Murphy who took his earth scraper and a team of horses to open up the channel. When high winds lashed the area and threatened to topple trees, Murphy came to the rescue by tying a sturdy rope around several closely grouped trees, thereby enabling the trees to reinforce each other and resist the force of the wind. He also helped to plant trees in Carmel to stabilize the soil exposed by building activity, and to prevent the soil from being washed into the sea by the heavy rains.

As Murphy's own business grew, he added more carpenters, stone masons, plumbers, electricians, plasterers and painters to his staff. He needed administrative and managerial help, so he hired J. O. Handley as his General Manager. Handley remained in this capacity until he began his own construction supply business, Handley and Handley (later becoming H&H). While most of the structures that Murphy erected were of his own design, he was also the contractor for a number of well known architects – Julia Morgan, Bernard Ralph Maybeck, and Robert Stanton among them. In designing his buildings, Murphy would talk to the customer, visit the site to get a visual image of the proposed structure on the site, and then go home and put it on paper. His designs were simplified drawings, but were complete and accurate enough so that major changes could be made. Murphy was a most active and prolific builder in the area and did as much to give Carmel its character as any other single person. Handley has stated "that Murphy built more than half the houses in Carmel."

Among his most notable structures are the Pine Inn, which he completely remodeled with his own design, the La Playa Hotel, the Carmel Highlands Inn, the Carmel Art Association, the Holiday House, the Carmel Texaco Station, the Sundial Lodge, the Farley Building, the Carmel City Hall (originally All Saints Episcopal Church), and the Dansk Building. The Harrison Memorial Library was partially designed by Bernard Ralph Maybeck and constructed by Murphy. However, there are no known plans of the library to be found. According to Murphy's daughter, Mrs. Rosalie Gladney, Bernard Maybeck who lived in San Francisco, would come down periodically from the city, view the progress, consult with Murphy, and return to the city on the afternoon train. It is generally conceded that Murphy had as much to do with the design of this building as Maybeck.

B10. Significance (Continued from Page 3)

Another important structure that Murphy helped to build was Tor House, the famous home of poet Robinson Jeffers. The Jefferses designed Tor House and at first hired Murphy to build it. Then in a turn-about, Jeffers worked for Murphy at \$1.00 a day learning, by working alongside Murphy, how to build his home with granite boulders from the Carmel Beach. The first section of the house was finished by Murphy in 1919. Jeffers, himself, completed the rest of the structure, including the tower and wall, over an extended period of time.

Murphy was a busy, prolific builder for a long time, but he also contributed to the general welfare of the community in other ways. He was a member of the Carmel City Council, and the Carmel Building and Loan Society. He was a charter member and director of the Manzanita Club, a social organization for the community that conducted adult athletic events as well. When moving pictures came to Carmel in 1915, Murphy was one of a committee for the Carmel Hall Association to oversee the new business, and to make sure "first class" movies were shown every Saturday. The Murphys had four children. They and other village youngsters were always welcome at the Murphy Lumberyard to gather scrap wood for projects or just to play nearby. Before a permanent school was built, classes for eighteen children were held in Murphy's lumberyard for two years (1905 and 1906), and when the first Carmel Boy Scout Troop was organized, M. J. Murphy built the clubhouse.

Murphy retired in 1941, shortly after his wife's death. He turned his business over to his son Frank, and spent most of the remaining years of his life living in a summer house in Oregon and fishing in the McKenzie River. Murphy died there in 1949. M.J. Murphy, Inc., is still an active business in Carmel Valley, where it was relocated after Murphy sold the original Carmel store. It has been operated by his two grandsons since his son's death in 1978.

The Fee Building meets the criteria established in the CHCS 1997 as an excellent example of the Spanish Colonial Revival Style adapted to mixed commercial-residential use in Carmel-by-the-Sea.

Property Type: library Area: Carmel by-the-Sea

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Harrison Memorial Library is significant under California Register criterion 1 as a major cultural institution in Carmel, and one of its first public works projects. It is also significant under criterion 3 in the area of architecture, as an excellent example of Spanish Eclectic design in a public building, and the only known building in Carmel to be worked on by noted California architect Bernard Ralph Maybeck. Carmel's first library had been established in 1904 and occupied a cottage at the cr. of Lincoln & Sixth. in 1905 it was operated as the Carmel Free Library Association, w/a board of directors who paid nominal annual dues for its maintenance. In 1911 the bylaws were amended and it became the Carmel Free Library. Dues at this time were twenty-five cents a month, or three dollars a year. Most of the reading material was donated, as were the furnishings in the building. Mrs. Ella Reid Harrison, widow of California Supreme Court Justice, Ralph Chandler Harrison, was a supporter of the Carmel Free Library. When she died tragically in a fire in 1923, she left the city sufficient funds to establish a municipal library, in memory of her husband. The actual design and construction of the facility did not take place until 1926-27. When constructed, the Carmel Free Library turned over its holdings to the new institution. In 1926 the Carmel Board of Trustees held a design competition for the new library. There were nine entries. Those who submitted plans included Hugh Comstock, Michael J. Murphy, Percy Parkes, Robert A. Stanton, Clay Otto, Calvin Bates, W.A. Beckett, W. Hastings & A. Natovic. At a Trustees meeting on Aug. 20, 1926, "it was agreed that the Spanish-type building met with the most favor, but none of the plans submitted were entirely satisfactory." It was then moved that the board consult with San Francisco architect, Bernard . Maybeck about the library design. Maybeck indicated that he was unable to take full charge of the library plans and construction supervision, but would consult with M.J. Murphy, who was selected to do the work. In November, 1926 Murphy's plans, and a large color sketch by Maybeck were shown the board. On Dec. 16, Murphy was requested to prepare blueprints and specifications.

□ Continuation □ Update

P3. The lower floors on the north side are surrounded by tall concrete retaining walls covered in a Carmel stone veneer. Tall, narrow multi-paned windows are found on the ground floor of the main building block along this elevation, w/a large archedfocal window above, and the west wing has a series of three-panel horizontal windows, high in the building envelope, to bring light to the interior. The main building block, projecting south along the east side of the parcel, has three very large arches.: two along the west wall, partially filled w/clay roof tiles, and the principal focal window in the south gable end, which is a multi-paned industrial steel type, that includes a full height glazed exit door in its center. The only exteriorchanges appear to be the 1949 addition to the north side of the west wing, and a rearrangement of the front entry, where the original Carmel stone pier was centered on the overhanging roof, affording passage on both sides of the column. The entry doorway is a recessed stuccoed arch, w/a wood planked arched door, and small arched window w/wrought iron grille. Of interest is the existence of a series of wrought iron rings attached to the Carmel stone retaining wall at the SE cr of the west wing for securing pets while in the library. The ell shaped building is sited along the north and east side lot lines ofthe parcel, creating a large, natural parklike frontage along Ocean and Lincoln, w/mature pines and natural foliage. The entry walkways are framed w/Carmel stone retaining walls.

B10. On Feb. 27, 1927, Murphy's complete specifications, as approved by Bernard Maybeck, were presented to and accepted by the trustees. On July 5, 1927, Murphy's bid of \$20,373 for the work was accepted and he was awarded the contract. The *Monterey Daily Herald* for Mar. 30, 1928, announced the formal opening of the new facility, erroneously crediting Maybeck w/the entire design. It noted that the large arched focal windows and entry way were "true Spanish copies", and that the gallery around the children's room was suggestive of Mexican galleries. As constructed, the north side elevation of the west wing had a massive north window that flooded the interior space w/light. This feature was lost in the 1949 addition by architect Robert Jones. The original building incorporated elements derived from Spanish, Mexican and the Monterey Colonial styles. All were incorporated insuch a way as to insure the programmatic needs of a modern (1927) library. This was one of Maybeck's particular areas of expertise, and his hand canbe seen refining Murphy's basic scheme to produce the best possible product. Carmel architect Robert Jones's seamless 1949 addition along thenorth side of the rison Memorial Library continues to be a success, both as an excellent example of Spanish Eclectic design, integrated into the dscape, and as a seminal social institution of Carmel. The Harrison Memorial Library retains its historic integrity to a high degree. It development and government, civic and social institutions.

Applicable Criteria: CR#1

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Pine Inn qualifies under CR#1 as the premier hostelry in the history the Downtown District of Carmel-by-the-Sea. The Hotel

C-1

Carmelo, built by Delos Goldsmith and Abbie Jane Hunter in the 1880's, originally located at the northeast comer of Ocean and Broadway (now Junipero), was moved to the northeast comer of Monte Verde and Ocean where a one story low hipped roof entrance, sun room, and dining room were added by architect Thomas Morgan in 1903 to the original two-story structure. The 1903 style was Craftsman. In 1928, a major remodel was designed by Blaine and Olson in a Spanish style with major additions to the existing buildings that would eventually encompass most of Block 73. The walls were covered with stucco and the shingled roofs remained intact. Parts of the hotel expanded to three stories on the sloping lot. A rendering appeared in a promotional pamphlet of contractor builder M. J. Murphy who carried out the major remodeling. In 1940, the interiors were remodeled in a Victorian style for owner Hamson Godwin, and several one story retail shops were added to the southeast, southwest, and eastern perimeters of Block 73 almost encircling the hotel. An open courtyard in the center of the complex had a glass gazebo dining area added in 1972.

The Pine Inn embraces the historical development of downtown Carmel from the 1880s to the present. The mix of architectural styles from Craftsman to Spanish to modern technology mirrors Carmel's overall architectural development. The architects and builders, including Delos Goldsmith, Thomas Morgan, Blaine and Olson, and M. J. Murphy, also attest to the Pine Inn's historical significance.

DELOS GOLDSMITH

Delos Goldsmith was born in Painsville, Ohio, on September 3, 1828. He left Ohio at the age of 19 for New Orleans. When New Orleans did not capture his youthful spirit, he moved to San Francisco in 1850 and was a witness to the great fire in 1851. A carpenter for two years in San Francisco, he worked on the first Presidio reservation, then left for Marysville, and later went to Yuma, Arizona. He worked in the oil business there until the outbreak of the Civil War at which time he was appointed citizen wagon-master of the Twenty-ninth Ohio Volunteers Goldsmith was taken prisoner at Harper's Ferry and endured hardships until he managed to escape, which eventually took him south on a lumber expedition. In 1879, he became an agent for a Dr. Stockton who was involved in an oil concern.

Back in California again in 1888, Goldsmith came to Carmel in late 1888 where he erected a home for his wife's sister's daughter, Miss Robinson, in which he lived while constructing other homes for early residents - the Berwicks, Joseph Sley, and Miss M. E. Donnelly, among others. He built a shed for his carpenter shop on the southwest comer of Ocean and San Carlos, behind the Carmel Development Store. Between 1892 and 1894, acting on behalf of Abbie Jane Hunter, the wife of his nephew, Wesley Hunter, he constructed two lovely identical homes. One was on the northeast corner of Guadalupe and Fourth and later belonged to Mr. and Mrs. William Askew, Sr. The other home, on the northwest corner, became the Goldsmiths' home.

THOMAS MORGAN

Thomas Morgan was the brother of artist Mary deNeal Morgan.

BLAINE AND OLSON

Roger W. Blaine and David Olsen had been partners with Willson J. Wythe in Oakland, and were primarily church and commercial designers. Wythe, an instructor at UC Berkeley, died in 1926, and the firm of Blaine & Olsen only lasted until the Depression. Both Blaine and Olsen had spent some time traveling in Spain prior to the commission, so they were acutely aware of the nuances of Spanish architecture.

M. J. MURPHY

Michael J. Murphy was a pioneer builder and contractor in the earliest era of Carmel, and therefore helped to shape the entire architectural character of the village. He was bom in Minden Utah in 1884 of hardworking parents of limited means. Young Murphy managed to finish high school, but then had to begin to earn a living as a house painter. In 1902, he visited Carmel and became attracted to the area. He married in 1904 and returned to Carmel to live. His son Frank was "the first white boy child" to be born in Carmel.

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was oon in business erecting the simple board and batten structures so common in Carmel at the time.

B. 10. Significance (Continued from Page 3)

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

At the same time, Franklin Devendorf of the Carmel Development Company had purchased much of the land in Carmel, and began to subdivide and sell the parcels. Devendorf knew Murphy and had taken a liking to him. Therefore, when he needed more houses for his lots to satisfy his prospective buyers, he helped Murphy set up a construction business. Because of his passion to be the best, Murphy went to great lengths to make certain that his structures were solidly built of quality materials. As his reputation in this regard blossomed, more and more people wanted a Murphy house. Murphy obliged and built houses all over the Monterey Peninsula, using his own designs and doing much of the work himself. In 1914, Murphy established his own contracting business, opened up a lumber and building supply store and hired many workers.

To assure a supply of crushed rock and gravel, Murphy erected a rock crusher in Carmel Valley. He obtained his rock from the shore of the Pacific Ocean and his gravel from the Carmel River. His team of horses and his wagons became a familiar sight in the area. People turned to him for assistance when they needed help. When the surf piled up the sand and blocked the mouth of the river causing the water to back up and flood the artichoke fields, the farmers called on Murphy who took his earth scraper and a team of horses to open up the channel. When high winds lashed the area and threatened to topple trees, Murphy came to the rescue by tying a sturdy rope around several closely grouped trees, thereby enabling the trees to reinforce each other and resist the force of the wind. He also helped to plant trees in Carmel to stabilize the soil exposed by building activity, and to prevent the soil from being washed into the sea by the heavy rains.

As Murphy's own business grew, he added more carpenters, stone masons, plumbers, electricians, plasterers and painters to his staff. He needed administrative and managerial help, so he hired J. O. Handley as his General Manager. Handley remained in this capacity until he began his own construction supply business, Handley and Handley (later becoming H&H). While most of the structures that Murphy erected were of his own design, he was also the contractor for a number of well known architects - Julia Morgan, Bernard Ralph Maybeck, and Robert Stanton among them. In designing his buildings, Murphy would talk to the customer, visit the site to get a visual image of the proposed structure on the site, and then go home and put it on paper. His designs were simplified drawings, but were complete and accurate enough so that major changes could be made. Murphy was a most active and prolific builder in the area and did as much to give Carmel its character as any other single person. Handley has stated "that Murphy built more than half the houses in Carmel."

Among his most notable structures are the Pine Inn, which he completely remodeled with his own design, the La Playa Hotel, the Carmel Highlands Inn, the Carmel Art Association, the Holiday House, the Carmel Texaco Station, the Sundial Lodge, the Farley Building, the Carmel City Hall (originally All Saints Episcopal Church), and the Dansk Building. The Harrison Memorial Library was partially designed by Bernard Ralph Maybeck and constructed by Murphy. However, there are no known plans of the library to be found. According to Murphy's daughter, Mrs. Rosalie Gladney, Bernard Maybeck who lived in San Francisco, would come down periodically from the city, view the progress, consult with Murphy, and return to the city on the afternoon train. It is generally conceded that Murphy had as much to do with the design of this building as Maybeck.

B. 10. Significance (Continued from Continuation Page 4)

Richard N. Janick

Another important structure that Murphy helped to build was Tor House, the famous home of poet Robinson Jeffers. The Jefferses designed Tor House and at first hired Murphy to build it. Then in a turn-about, Jeffers worked for Murphy at \$1.00 a day learning, by working alongside Murphy, how to build his home with granite boulders from the Carmel Beach. The first section of the house was finished by Murphy in 1919. Jeffers, himself, completed the rest of the structure, including the tower and wall, over an extended period of

Murphy was a busy, prolific builder for a long time, but he also contributed to the general welfare of the community in other ways. He was a member of the Carmel City Council, and the Carmel Building and Loan Society. He was a charter member and director of the Manzanita Club, a social organization for the community that conducted adult athletic events as well. When moving pictures came to Carmel in 1915, Murphy was one of a committee for the Carmel Hall Association to oversee the new business, and to make sure "first class" movies were shown every Saturday. The Murphys had four children. They and other village youngsters were always welcome at the Murphy Lumberyard to gather scrap wood for projects or just to play nearby. Before a permanent school was built, classes for eighteen children were held in Murphy's lumberyard for two years (1905 and 1906), and when the first Carmel Boy Scout Troop was organized, M. J. Murphy built the clubhouse.

Murphy retired in 1941, shortly after his wife's death. He turned his business over to his son Frank, and spent most of the remaining years of his life living in a summer house in Oregon and fishing in the McKenzie River. Murphy died there in 1949. M.J. Murphy, Inc., is still an active business in Carmel Valley, where it was relocated after Murphy sold the original Carmel store. It has been operated by his two grandsons since his son's death.

The Pine Inn clearly reflects the finding of, and is consistent with, the 1997 Carmel Historical Context Statement under the themes of architectural and economic development.

Property Type: Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Seven Arts Bldg. is significant under California Register criterion 1, in the area of history as the workplace of several significant individuals and institutions in Carmel's history. Its is also significant under criterion 3, in the area of architecture for its use of the Thermotite brick method of construction, and as the only known Carmel design by Monterey building designer.

Albert B. Coats.

Albert B. Coats arrived on the Monterey peninsula about 1919. He was the chief building designer for noted Monterey contractor James C. Anthony in the early 1920s. He was responsible for some of the design of Anthony's Monterey mesa artist's colony. In 1924 he went to work for builder Fred McCreary, as yard and office manager, as well as designer. Coats established his own practice in 1929, working with his son Orville. The local press of the period noted that Coats "specialized in Spanish design." The quality of Coats' design work can be seen in the complex arrangement of the Seven Arts Building and its interior spaces, as his familiarity with the decorative volcabulary of the various romantic revival styles of the period. That so little has changed on the exterior of the building since its construction in 1925, is a compliment to the designer's vision.

Coats employed a specialized cement block framing system for the Seven Arts Bldg. in 1925. The product was called Thermotite, and was produced locally for a period of time in the mid 1920s. Touted as fireproof, waterproof and "practically everlasting" the concrete block method of construction consisted of building a double wall, tied together by vertical and horizontal steel members, which created a a continuous air space, forming both insulation and protection against dampness.

The building remains in excellent physical condition.

P3. Gable ends have large, mutli-paned fixed windows, w/mullions. The east facing gable of the main building block is in a Palladian form, and the north facing gable of the south wing has a large, segmented arched opening. Most windows have multi-paned panels at the top w/clear plate glass below. Some original period exterior light fixtures are present. The large building is sited at the edge of the sidewalks along its Ocean Ave. and Lincoln St. frontages, behind a screen of street trees. The open court to the south is brick covered.

B6. Interior remodel 1980 (CBP #80-88); interior remodel 1988 (CBP #88-71); interior remodel 1994 (CBP #94-72); replace exterior wood stairs, in kind 1995 (CBP #95-83); interior remodel 1996 (CBP #96-99); interior remodel 1998 (CBP #98-35); reroof w/cementatious shingle 2000 (CBP #00-43); interior remodel 2001 (CBP #01-121).

B10. Polk's 1926 business directory for Carmel notes that "The Seven Arts Building was the original of Carmel's famous shops...the first devoted to things of beauty and utility instead of utility alone." Herbert Heron, the commercial building's original owner, was the founder of Carmel's Forest Theatre, and built the Seven Arts to house his own book shop and publishing facility, The Carmel Press. Artists George & Catherine Seideneck did the original interior decoration. Heron included space in the plan for an art gallery and frame shop that became the first showplace for the Carmel Art Association, in 1927. The building later housed the Carmel Art Institute, operated by artists Armin Hansen and Paul Whitman, in the late 1930s. The Carmel Cymbal, a newspaper run by writers W.K. Bassett and Dorthea Castlehun, was housed in the facility. It was for many years a focal point for the fine & decorative in Carmel. Although the Seven Arts Building has seen numerous interior remodeling projects over the 78 years of its existence, the structure's exterior elevations have remained intact. It is an important architectural element of the commercial core area. The Seven Arts Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

1903-1940

Area: Carmel by-the-Sea two-story commercial

Applicable Criteria:

Property Type: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) Sade's is significant under California Register criterion 3, in the area of architecture as an important contributor to the overall design of the historic Court of the Golden Bough, and is also significant as a good example of commercial Tudor Revival design by noted Carmel designer/builder Lee Gottfried. Sade's was constructed two years after Edward Kuster finished his first medieval European influenced shop, in what would become the Court of the Golden Bough, at the SE cr. of Monte Verde & Ocean Ave.. The original owner was noted writer and magazine editor, Harry Leon Wilson, who built it, in part, to house his wife's flower shop, "The Bloomin Basement". Sade's became the eastern anchor building of the Court, and the established social center for actors, artists & musicians associated with Kuster's Golden Bough Theatre. For fifty years Sade's was one of the most popular social spots in the village. Its half-timbered design & stepped roofline suggests a portion of a streetscape in medieval England, as it rises back and up, on its rather narrow lot. The staggared butt, wood shingle roof w/its wide, sweeping

valley reads as thatch. Builder Lee Gottfried had executed similar designs for Kuster when the Court was first begun in 1923. A native of Ohio, La Von (Lee) Gottfried had come west working for the Pacific Telephone Company. In 1917 he enlisted in the U.S. Army and served in France during WWI. Returning to California and his telephone work at war's end, he came to Carmel and took up the contracting trade in 1920. He first worked for Edward Kuster in the construction of the latters stone house on Carmel Point. He designed and built his own home in 1921, and continued to work for Kuster, building the Carmel Weaver's Studio for Ruth Kuster, in 1922.

In 1924, Carmel Pine Cone editor, Perry Newberry extolled the virtues of Kuster's accomplishment with the Court of the Golden Bough, "as the one man responsible for the building of unique and different shops in Carmel." Newberry was pleased to see Kuster's lead taken up by others, like Wilson, who designed their new commercial spaces in the same style.

P3. The building is sited on the east side of the Court of the Golden Bough and its Carmel stone courtyard, behind a screen of street trees along Ocean Ave.

B10. According to Newberry, "instead of the white front wooden buildings that are characteristic of every small town in the west, Kuster's dream - made into reality- has changed our main street into an Ocean Avenue of beauty and artistry." Sade's has had several minor exterior changes over time. However, anyone who knew the restaurant and its associated shops from the 1920s to the 1950s would easily recognize the building today. The property was a product of the changing commercial visage of Carmel's downtown in the mid 1920s. It became a visual anchor building along the east side of the Court of the Golden Bough, and remains so today, reflecting a period of individuality and creativity in both commercial and residential design. An "Old World" look that initiated the concept of Carmel as a village in a forest has drawn tourists to its downtown ever since. As a contributing building to a potential downtown historic district, Sade's clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

Carmel by-the-Sea Area: one-story commercial

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Carmel Weavers Studio is significant under California Register criterion 3, in the area of architecture as one of the early commercial shops designed & funded by theatrical entrepreneur Edward Kuster, and incorporated to compliment his Golden

Bough Theatre.

The Studio was originally constructed by Lee Gottfried for Kuster's wife, Ruth, in Sept. 1922 at the SE cr. of Ocean & Dolores. It housed her and two fellow weavers, Vivienne Higginbotham & Iris Alberto. In July 1923 the Studio was moved to its current location in the Court of the Golden Bough. In August of 1923 contractor Gottfried expanded the original Studio, w/a design by Kuster, that included a novel ticket booth for the theatre. Edward Kuster came to Carmel in 1920 to establish a high quality little theatre, and school of acting. He purchased land at the SE cr. of Ocean and Monte Verde, to build the Court of the Golden Bough, which included a group of several shops, deriving their design from medieval European sources. The Carmel Weavers Studio was based on English cottage forms, and was located in the Court during construction of the Seven Arts Shop. Local writer Daisy Bostick noted in an article for The Pine Cone, in April, 1924 that, "In Carmel by-the-Sea there is a group of little shops that might well be transferred to an artist's canvas and labeled 'a bit of Old Europe'. Perry Newberry also extolled the virtues of the 'artistic shops', when he editorialized that Edward Kuster ought to be nominated to the Carmel Hall of Fame, "not only because of his Theatre of the Golden Bough, because he's the one man responsible for the building of unique and different shops in Carmel." Newberry went on to say, "When Kuster began, in 1923, to design the plans for his little theatre he also designed at the same time a group of artistic shops...They met with public approval apparently for it was not long after this until there were other little shops built in the same style. So, instead of white front wooden buildings that are characteristic of every small town in the west, Kuster's dream - made into reality - has changed our main street into an Ocean Avenue of beauty and artistry."

 □ Update

B10. Like the other shops in the Court of the Golden Bough, the Carmel Weavers Studio has had a number of commercial uses, including a real estate office and a candy store. While some fenestration has been altered, the basic building form and its materials have remained the same. Anyone who knew the shop in the 1920s would have little trouble recognizing it today. Creation of the Court of the Golden Bough entirely changed the commercial visage of Carmel-by-the-Sea in 1923-24, and initiated a period of individuality and creativity in both commercial and residential design that persists to the present. The 'Old Europe' look described by Daisy Bostick in 1924 established the romantic concept of Carmel as a village in a forest, which has drawn tourists to its downtown ever since. The Carmel Weavers Studio, as an integral part of the Court of the Golden Bough shop complex, clearly contributes to the character of a potential downtown historic district, and as such reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

Period of Significance: 1903-1940 **Property Type:** Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Amelia Gates Bldg. is significant under California Register criterion 3, in the area of architecture as one of the two known building designs by Dr. Amelia Gates, and as a major contributor to, and anchor building of the Court of the Golden Bough, the first commercial complex in Carmel to employ Medieval influenced architecture in its design. The Court of the Golden Bough was developed in 1923 by Edward Kuster, around his Golden Bough Theater at the SE cr. of Ocean and Monte Verde, across from the popular Pine Inn. The series of shops Kuster designed for the Court were small scale reflections of Medieval building types he had seen in his European travels, especially in Germany. Lee Gottfried was his contractor. At least one building of similar style was moved to the site in about 1924, and Amelia Gates two story building, which derived its design from Austrian sources, completed the complex in 1928. Carmel Pine Cone editor, Perry Newberry nominated Kuster to Carmel's Hall of Fame in a 1924 editorial, "as the one man responsible for the building of unique and different shops in Carmel" Newberry went on to note that the Court of the Golden Bough, "had changed our main street into an Ocean Ave. of beauty and artistry." Dr. Amelia Levinson Gates, a widow, had first come to Carmel about 1910 when she constructed at least one small cabin on a parcel the couple owned on Camino Real. Gates & her husband Howard had met as students at Johns Hopkins University, and by 1910 had established careers, he as a sugeon, and she as a pediatrician. Howard died in Rome in 1913, where he was chief surgeon of a large hospital. Amelia returned to San Francisco, where she pioneered in preventive care for children, and helped establish the Florence Ward Hospital. She retired to Carmel in 1922, replacing the earlier cabins on the Camino Real property with a small cottage of her own design. In 1927 she designed and supervised the construction of the two story commercial building at the SE cr. of Ocean and Monte verde. Its design was based on Austrian building types she was familiar with from her travels in Europe. A mixed use building, it originally had a studio on the upper floor.

Date 12/13/2002

□ Continuation □ Update

P3. Description

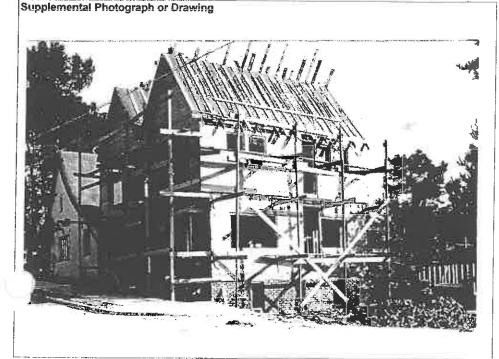

B6. remodel interior 1958 (Cbp #3151); basement remodel 1964 (Cbp #4198); interior remodel 1979 (Cbp #790182); interior alt. 1980 (Cbp #80-67); add fire escape 1981 (Cbp #81-5); interior remodel 1981 (Cbp #81-133); interior remodel 1986 (Cbp #86-118); interior remodel 1990 (Cbp #90-105); fire reair 1991 (Cbp #91-40)

P3. Fenestration isotherwise irregular, w/a combination of paired and banked multi-paned casement type windows. The pair of windows on the west gable, facing Ocean Ave., may have been added in 1950. The property is sited flush w/the sidewalk on the SE cr. of Ocean & Monte Verde, behind a thin screen of mature street trees.

B10. Its design fits comfortably with the "Old World" characterof Edward Kuster's Court of the Golden Bough. As late as 1940 Dr. Ages partnered with J.C. Phillips in purchasing the property on the north side of 6th, opposite Devendorf Park, for a proposed hotel project to be called the Gates-Phillips Carmel Hotel. Gates had been a strong supporter of Devendorf Park. She continued to practice pediatrics in Carmel until her death in 1947. A brilliant scientist, intellectual, and committed community activist, Dr. Gates was also one of a number of educated, independent women who designed and constructed buildings during Carmel's formative years.

Fred McCrary, Dr. Gates' building contractor, was more well known for his work in Monterey and Salinas. He was a native of North Caroline who moved as a youth with his family to Terre Haute, Indiana, where he joined his contractor father in business as a carpenter. He supervised construction on the Fine Arts Building and Festival Hall of the Panama-Pacific International Exposition in San Francisco. After the fair, he moved to Pacific Grove where he continued a successful career as a building contractor.

In spite of numerous changes over time, the Amelia Gates Building remains as one of the principal visual anchors at the western end of Carmel's commercial core. Anyone who knew the building during its early days would have no problem recognizing it today. It clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

Carmel by-the-Sea

Property Type: Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) La Rambla is significant under California Register criterion 3, in the area of architecture, as an excellent example of the commercial work of noted Carmel contractor, A. Carlyle Stoney, as one of the three remaining arcaded Spanish Eclectic style commercial buildings in Carmel, and as a contributor to a potential downtown historic district. One of the more interesting features of the Carmel downtown business district is its maze of mid-block pedestrian pass throughs, from street to street. This phenomena was introduced to the village in the mid-1920s with a commercial building boom that saw the creation of several romantic revival style mixed-use building complexes. The first was Edward Kuster's Court of the Golden Bough, at the SE cr. of Monte Verde & Ocean. Kuster fronted his Golden Bough Theatre with an open Carmel stone courtyard and several small specialty shops of medieval European design. His project initiated the employment of romantic revival forms, especially the Tudor and Spanish Eclectic revival styles, to replace the older, western false front stores and shops that constituted the business core. Tudor influenced designs moved east along Ocean from Monte Verde, while the somewhat later Spanish Eclectic forms developed along 7th, between Lincoln and Dolores Street. By the late 1920s, both styles were freely intermixed as the village took on a new commercial look. These complexes tended to establish small shops on the ground floors, w/studio and residential quarters on the second. The arcaded passages, so common the the Spanish Eclectic mode, were ideal for these uses. The best remaining examples are El Paseo (1928), with a T shaped interior court, at the NE cr. of 7th & Dolores, Las Tiendas (1929), on the south side of Ocean between Dolores and San Carlos, and Las Ramblas. It is the quality of these public spaces, with their intimate scale, and rich decorative volcabularies, that has done as much to give Carmel its architectural reputation as a village in a forest, as the woodsy homes and fairy-tale cottages of its residential district.

□ Continuation □ Update

B10. Significance

P3. Shaped, flat-board balusters make up the railing of this feature. A low-pitched, gable-roof w/skylight was added above the arcade pass through in a 1994 reroofing. This project saw the loss of the original mission tile roof covering and its replacement with composition shingle. Fenestration includes round-arched woodendoors & windows for the shops alongthe inside of the arcade. There are round-arched windows in the rear (west) of the ground floor, facing a plant nursery in a large, terraced patio, below to the west. The second floor is characterized by bands of multi-paned, steel casement type windows along the sides and rear (west) elevations. La Rambla is sited abuting the sidewalk along Lincoln, behind a screen of street trees.

B10. Guy O. Koepp came to Carmel in the early 1920s as an unlicensed architect. Most of his major commercial work appears to have been done in the later 1920s and into the 1930s, when he designed at least four major commercial buildings in the business core. They included La Rambia, the Goold Bldg. at the NE cr. of San Carlos & Ocean, a replacement building for the old Manzanita Hall, at the SW cr. of Ocean and Mission, w/M.J. Murphy as contractor. This building andthe Reardon bldg., which housed the Carmel Dairy, still frame the visual entry to Carmel's commercial core. Koepp and Murphy also collaborated on the new Manzanita Clubhouse on Dolores. Koepp also did residential design. Among those known are his own home, in Carmel Woods, the Alan Knight Hse., and the Webb Hse. Koepp moved to Los Angeles at the outbreak of WWII, and died in Beverly Hills in 1959.

Contractor A. Carlyle Stoney came to Carmel in 1917 from Utah, where he had been associated with the Brigham Copper Mines for some time as an engineer, after taking a degree from the University of Utah, at Salt Lake. He came with his four brothers, Maurice, Robert, Paul and Ronald, who were carpenters, and went to work for M.J. Murphy. They built a home on Carmel Point, adjacent to the old Abalone League baseball field, and worked for Murphy until forming their own building enterprise in1925. A.C. Stoney's name is the only one that appears on the building permit for the La Rambla Bldg., suggesting he may have also been the designer. There were available examples of the Spanish Eclectic style he might have referenced. The only apparent change to the facade of the 1929 is the loss of the mission tile that capped part of the roof system. Anyone familiar with Carmel in the early 1930s would easily recognize the La Rambla Building today. It clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of ---hitectural and economic development.

P3. It replaced the original two-panel wood door sometime after 1958. There is a recessed wooden staircase found toward the east (rear) on the north side-elevation that leads to a second floor walkway accessing several guest rooms along the north, east and south elevations at the second floor. Fenestration is irregular with a combination of single and paired multi-paned steel casement industrial windows. Original ground-floor windows on the secondary rear elevation were changed to French doors at some time in the recent past. No building permits were found for this work. The building is sited adjacent to the Carmel City Hall, in a wooded mixed use residential and commercial district of one-story homes and two and three-story retail and visitor accommodating facilities of differing ages and styles.

B10. The Spinning Wheel Restaurant was established by Joseph and Clara Motta, a Northern Italian couple from Greenwich Connecticut who had spent their summer vacations visiting Carmel. Joseph was a retired butcher who operated the kitchen, and his wife Clara managed the restaurant. The Spinning Wheel Restaurant was a Carmel fixture for almost thirty years. The subject property is the only identified example of a commercial building by noted Bay Area and Carmel architect Edwin L. Snyder. The building's modified Monterey Colonial Revival design reflects a continuation of Carmel's tradition of period revival architecture in its downtown business district in the post WWII era. The building retains much of its physical integrity as constructed in 1952, with some window and door changes. The property continues the theme of architectural development, established in the 1997 Carmel Historic Context Statement, in that it contributes to the understanding of the overall design character of the community.

Area:

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Carmel City Hall is significant under California Register criterion 1, in the area of history as the seat, and center of political activity since 1946. Prior to its conversion from religious to secular service, City Hall had been the All Saints Episcopal Church. It was designed in 1913 by Albert Cauldwell, a San Francisco architect, and constructed by M.J. Murphy of Carmel. Murphy built additions to the church, as its use expanded, concluding with a parish hall to the north in 1928.

The City of Carmel by-the-Sea had conducted the business of the community from rented space since its incorporation in 1916. First in the Philip Wilson Bldg., at the NW cr. of Ocean & Dolores from 1917 to 1927, then from the second floor of the Oakes Bldgs on the west side of Dolores between Ocean & 7th. On September 6, 1946 Mayor Fred Godwin and the city council accepted an offer by All Saints Church to purchase the facility, including the rectory, parish hall and two vacant lots for a permanant city hall. There is no record of physical change in the building complex until early 1953, when architect George Wilcox reworked the building, removing the church bell tower & vestibule, shingling over the original Rose window in the west elevation, and designing a new portico entry to the council chambers in a more classical (secular) form. Architectural modernist Henry Hill made additions to the south side-elevation, for the Planning Dept. in 1973, which were revised and altered in the last major remodel, by the local firm of Fred Keeble & George Rhoda in 1985. The end product of all this modification and change over time is a simple, but dignified shingled complex of steeply-pitched projecting bays, w/ single, paired and banked multi-paned wood windows, that echo in many ways (including its natural landscape setting) the early character of much of Carmel's residential housing.

Carmel City Hall

Date 11/22/2002

P3. The building is surrounded by mature pines and oaks in a natural landscape setting, w/mature shrubbery along the s/side elevation, abuting the macadamized parking lot.

B10. In 1946 Carmel not only got a new seat of government but also a new department, when it established its first planning commission. Its initial makeup included a majority of Carmel oldtimers, including Forest Theater founder Herbert Heron, Carmel's "builder of dreams" Hugh Comstock, former city councilwoman and conservationist Clara Kellogg, and Florence Josselyn. The group formalized many of Carmel's earlier traditions into a new zoning code. They controlled commercial signage and outdoor advertising, kept buildings at a two story height, w/the scale of private homes limited to a proportion of the lot size, required landscaping adjacent to new construction, controlled the removal of trees, and kept the sidewalks unpaved outside the business district, but were not successful in slowing visitor accommodating development in the 1950s. In 1958 Arts and Forestry commissions were established. In 1964, the city purchased Sunset School for a cultural center that continues to house the internationally famous Carmel Bach Festival. It saved the Forest Theater in the 1970s.

In the 1960s, Carmel's governing body gained national notoriety for expelling "hippies" from Devendorf Park. A later controversy over take-out ice cream also made the national press. Throughout this period colorful local figures like Gunnar Norberg and Barney Laiolo traded places on the city council from time to time, representing the interests of art vs. commerce. Even film icon Clint Eastwood served a stint as mayor. Carmel continues to wrestle with the issues of art vs. commerce, and growth vs. tradition, a work in progress through the municipal process, in the same city hall it has occupied since 1946. Though the former church structure lost its original vestibule and bell tower fiftyyears ago as it moved from religious to secular purposes, Carmel City Hall retains sufficient integrity for inclusion in the historic survey. It clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of government, civic and social institutions.

The Sundial Lodge is significant under California Register criterion 3, in the area of architecture as one of the few remaining visitor accomodating facilities from the late 1920s and early 1930s that essentially maintains its original exterior appearance. It is also significant as the work of noted San Francisco architect Albert Farr. The design inspiration was that of Allen Knight, one of Carmel's most cotorful figures. Knight was an inveterate traveler, and had seen such buildings on a visit to eastern Europe. In 1929 a Carmel Pine Cone article on the proposed hotel noted that, "the architecture is European, probably more Bohemian than of any other national type, and fits in well with Carmel's general scheme". This referred to the concentration of Medieval influenced romantic revival commercial buildings in the general area of Monte Verde, Ocean Ave. & Lincoln that had helped define Carmel as a village in a forest during the 1920s. Other architectural influences from southern Europe were at work as well in the commercial district, adding to the eclectic character of the community. Allen Knight would later serve as both city councilman and mayor of Carmel.

Architect Albert Farr was a specialist in domestic architecture in the San Francisco Bay Area. His most well known commission was "Glen Ellen" in Sonoma County, the first home of Jack London. He had worked in the offices of Clinton Day and the Reid Bros. before going into practice on his own.

Michael J. Murphy was the builder. Murphy was one of the earliest and most prolific builders in Carmel, constructing as many as 350 structures in the village during his long career, from about 1902 to the early 1940s. He is credited with establishing the residential look of Carmel during the important period of development between 1904 and the mid 1920s. It is probable that much of the material for the Sundial Court came from Murphy's local building supply company. Noted artist Henrietta Shore used one of the commercial spaces on the north side of the building as her painting studio during the 1940s.

□ Continuation □ Update

P3. There is also a slightly projecting gabled bay on the facade, at the inside cr. of the tower to the SW. This feature has four exposed decorative brackets at its base. There are two tiny eyebrow vents in the roof-plane of the west (front) elevation, evenly spaced between the projecting bays, close to the eave line. The current gutter system conceals the exposed rafter-tails at the eave line. The first floor of the hotel, along Monte Verde was designed as retail space, and is characterized by wide, segmentally arched bays, paired on either side of the central round arched entry. The windows in these bays are large, multi-paned glazed panels w/thick muntins. There are central doorways in the two bays closest to the hotel's arched entry passage. The bays to the south of the entry are capped by false voussiers. A raised decorative Gothic ogee molding w/acom details at its peak and ends, caps the principal entry. Fenestration is otherwise irregular w/a combination of single, paired and banked multi-paned wood casement type, w/planked wood shutters. The casement windows along the exterior of the building on the north, south and east elevations lack muntins, while the windows opening onto the interior courtyard do have them. This is per the original 1930 specifications, on file w/the Planning Dept.. The central windows in the third story of the west facing facade, above the entry, originally had diamond paned leaded glass windows, but now are single paned. The only other apparent change to the fenestration is the appearance of several wooden window boxes along the west facing facade. The interior court rises in a series of terraces, connected by open steps, all covered in red brick decking. The perimeter of the courtyard is planted w/low shrubbery and flower beds, w/deck furniture placed about. There is a round arched cloth canopy fronting the central entry, that does not appear in the original drawings. The hotel looks essentially as it did when construted in 1930. Of interest is the fact that architect Farr had originally intended to use some false half-timbering on the building, but for some reason, probably economic, canceled their use in a change order attached to the original specifications.

B10. The design for the Sundial Court was conceived by one of Carmel's most colorful figures, Allen Knight. His ideas were realized by noted San Francisco architect Albert Farr, and the work was executed by Carmel's premier master-builder M.J. Murphy. The design of the building was clearly in keeping with the desired "old world" ambiance established in the lower portion of the business district in the early 1920s, to maintain the aesthetic sense of the place as a village in the forest. The success of that venture is visible today. That there has been little change to the exterior appearance of the Sundial Lodge is a credit to its designers whose understanding of the vive, individual and eclectic nature of the village continues to be appreciated for its aesthetic qualities, and economic benefits to the munity. Sundial Lodge clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Mary Dummage Shops qualify under California Register Criteria #3 as significant for being designed and constructed by Earl Percy Parkes in 1924. The Neo-Pueblo design was also utilized by Parkes in his own home (1923)on the sand dunes of Carmel Beach. The site on the S.W. comer of Dolores and Ocean was also the site of Carmel's first restaurant, a tent on top of a wooden platform, built by Frank Devendorf for Mary Norton (later Dummage) in 1903. Mary's son, Bob Norton, became one of Carmel's Police Chiefs, and her sister was married to Philip Wilson whose building (N.W. comer of Ocean and Dolores) became Carmel's first city hall.

The Pueblo Revival Style became popular in the 1920s with its flat roofs and stuccoed walls emulating the original California adobes. Many local architects, including Robert Stanton, utilized the style in Carmel, Monterey and Pacific Grove. Dolores Street between Ocean and 7th is Carmel's most architectural and historical commercial corridor, showcasing designs by M. J. Murphy, Hugh Comstock, Percy Parkes, C. J. Ryland, Thomas Morgan, Pedro Lemos, and the Bay Area firm of Blaine and Olson.

Carmel's first city hall, post offices, art galleries, commercial banks, and the Pine Cone offices were located in this still intact city block.

B. 10. Significance (Continued from Page 2) EARL PERCY PARKES

Earl Percy Parkes, better known to his friends by his second name of Percy, was a native of the old Buckeye state but was a California resident for years. He was born in the city of Port Clinton in Ottawa County in northwestern Ohio, on May 2, 1884, the son of William H. and Louise (Barnes) Parkes. His father was a well-to-do shoe merchant in Port Clinton and was long regarded as one of the substantial citizens the community. Reared in Port Clinton, an attractive old town on Lake Erie, Percy Parkes attended schools there and was graduated from high school. He also received a good business education. As a young man, he worked with the passenger department of the Rock Island Railroad Company. It was during his years as a traveling excursion agent for the company that he came to California. After becoming a resident of California he entered the university at Los Angeles to study law. However, before completing the course and taking the final examinations, Parkes became connected with the extensive realty operations then being carried on in Los Angeles, and in 1911 established himself in that city as a building contractor. Mr. Parkes was engaged as a builder in Los Angeles for seven or eight years until he transferred his operations to Carmel in 1919 where he was quite successful. The considerable increase in the population and material interests of the village during that time owed much to his enterprise and energetic methods.

Mr. Parkes was twice married and by his first wife had a son, Earl Percy Jr. He and his second wife, Jeannette Hoagland, a native daughter of California, had a son, William Henry. Mr. and Mrs. Parkes took an interest in Carmel's general social and civic activities. Mr. Parkes was a member of the Masonic order and the Monterey Gun Club.

Among the progressive building contractors who did so much toward the advancement of the material interests of Monterey County, Earl Percy Parkes is entitled to special recognition for the fine character of work he did. During his residency in Carmel, he was in charge of a greater part of the really substantial building operations carried on in the community. The evidence of his craftsmanship is visible in the many notable residences erected during that time, and not a few of the more substantial business buildings, including a fine business block that he owned. His good taste and enterprise, coupled with up-to-date construction methods, characterized all these operations, and the attractive appearance of beautiful Carmel-by-the-Sea owes much to this energetic builder.

MARY DUMMAGE

Mary L. Dummage was one of Carmel's very first residents. She originally settled in Pacific Grove in 1889 and was enamored of it's prohibition of liquor. In 1903, she visited Carmel and bought a lot at Ocean and Dolores from Frank Devendorf and Frank Powers for \$300 (\$5 down \$5 a month) and opened a restaurant in a 20' x 30' tent. She eventually acquired additional lots on the west side of Dolores and was instrumental in the economic development of Carmel-by-the-Sea.

A sensitive remodeling of the windows was done in 1996 by architect Alan Turpin. The Mary Dummage Shop (later the Corner Cupboard) meets the criteria under architectural and economic development as stated in the Carmel Historic Context Statement 1996-97.

CR#3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Schweinger Building is significant under California Register Criteria #3 in the area of architectural development. It is one of two 2-story rectangular wood frame commercial buildings still extant on the south side of Ocean Avenue, with second story false-front window bays, that date between 1899 and 1910. This particular building has also housed a commercial bakery on the premises continuously since the first decade of the 20th century when it was established by Ernest "Fritz" Schweinger, who also was sales manager of the Carmel Land Company. The other building of similar design and plan is the Adam Fox building located two blocks to the east on the south side of Ocean between Mission and San Carlos.

The Schweinger Building's Victorian facade on the second floor still retains most of its original details, i.e. wood quoining on the sides, and a projecting comice on top framing the twin window bays with 1 over 1 sash windows supported by projecting wood corbels. A molded fascia articulate frames the bakery show window on the first floor with twin pilasters on the sides. The Schweinger Building, along with the Adam Fox Building represents two of the oldest commercial buildings in continuous use before the incorporation of the City of Carmel-by-the-Sea in 1916.

The Schweinger Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of architectural, economic, and historical development.

1880-1945

Property Type:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Mary Dummage Shop qualifies for the California Register under Criteria #3 as an example of the Craftsman-Fairy Tale Style of architecture popularized in Carmel in the 1920s by builder Hugh Comstock. The building was designed by Earl Percy Parkes in June 1926 at the exact time the "Tuck Box" by Comstock was under construction diagonally across the street. The "Tuck Box" has become the signature image of the Fairy Tale designs associated with Carmel-by-the-Sea and Comstock. In 1945. M. J. Murphy, the most prolific and eclectic builder in Carmel history, added the stucco exterior and replaced the rolled composition shingle roof as well as adding a Carmel stone partition on the N.E. edge of the building facing Dolores Street.

The original footprint of the building is intact with the addition of a small storage area in 1927 on the back southwest comer and a bathroom to the rear on the northwest comer in 1962. The overall facade has not been altered since M. J. Murphy's remodel of 1945.

Mary L. Dummage was one of Carmel's very first residents. She originally settled in Pacific Grove in 1889 and was enamored of it's prohibition of liquor. In 1903, she visited Carmel and bought a lot at Ocean and Dolores from Frank Devendorf and Frank Powers for \$300 (\$5 down \$5 a month) and opened a restaurant in a 20' x 30' tent. She eventually acquired additional lots on the west side of Dolores and was instrumental in the economic development of Carmel-by-the-Sea. (See Continuation Sheet)

B. 10. Significance (Continued from Page 2)

EARL PERCY PARKES

Earl Percy Parkes, better known to his friends by his second name of Percy, was a native of the old Buckeye state but was a California resident for years. He was born in the city of Port Clinton in Ottawa County in northwestern Ohio, on May 2, 1884, the son of William H. and Louise (Barnes) Parkes. His father was a well-to-do shoe merchant in Port Clinton and was long regarded as one of the substantial citizens the community. Reared in Port Clinton, an attractive old town on Lake Erie, Percy Parkes attended schools there and was graduated from high school. He also received a good business education. As a young man, he worked with the passenger department of the Rock Island Railroad Company. It was during his years as a traveling excursion agent for the company that he came to California. After becoming a resident of California he entered the university at Los Angeles to study law. However, before completing the course and taking the final examinations, Parkes became connected with the extensive realty operations then being carried on in Los Angeles, and in 1911 established himself in that city as a building contractor. Mr. Parkes was engaged as a builder in Los Angeles for seven or eight years until he transferred his operations to Carmel in 1919 where he was quite successful. The considerable increase in the population and material interests of the village during that time owed much to his enterprise and energetic methods.

Mr. Parkes was twice married and by his first wife had a son, Earl Percy Jr. He and his second wife, Jeannette Hoagland, a native daughter of California, had a son, William Henry. Mr. and Mrs. Parkes took an interest in Carmel's general social and civic activities. Mr. Parkes was a member of the Masonic order and the Monterey Gun Club.

Among the progressive building contractors who did so much toward the advancement of the material interests of Monterey County, Earl Percy Parkes is entitled to special recognition for the fine character of work he did. During his residency in Carmel, he was in charge of a greater part of the really substantial building operations carried on in the community. The evidence of his craftsmanship is visible in the many notable residences erected during that time, and not a few of the more substantial business buildings, including a fine business block that he owned. His good taste and enterprise, coupled with up-to-date construction methods, characterized all these operations, and the attractive appearance of beautiful Carmel-by-the-Sea owes much to this energetic builder.

M.J. MURPHY - BUILDER, CONTRACTOR

Michael J. Murphy was a pioneer builder and contractor in the earliest era of Carmel, and therefore helped to shape the enire architectural character of the village. He was born in Minden, Utah in 1884 of hardworking parents of limited means. Young Murphy managed to finish high school, but then had to begin to earn a living as a house painter. In 1902, he visited Carmel and became attracted to the area. He married in 1904 and returned to Carmel to live. His son Frank was "the first white boy child" to be born in Carmel.

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

B. 10. Significance (Contined from Page 3)

Recorded by:

Richard N. Janick

Date 9/13/2002

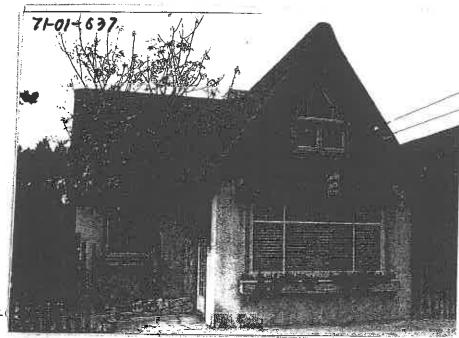

At the same time, Franklin Devendorf of the Carmel Development Company had purchased much of the land in Carmel, and began to subdivide and sell the parcels. Devendorf knew Murphy and had taken a liking to him. Therefore, when he needed more houses for his lots to satisfy his prospective buyers, he helped Murphy set up a construction business. Because of his passion to be the best, Murphy went to great lengths to make certain that his structures were solidly built of quality materials. As his reputation in this regard blossomed, more and more people wanted a Murphy house. Murphy obliged and built houses all over the Monterey Peninsula, using his own designs and doing much of the work himself. In 1914, Murphy established his own contracting business, opened up a lumber and building supply store and hired many workers.

To assure a supply of crushed rock and gravel, Murphy erected a rock crusher in Carmel Valley. He obtained his rock from the shore of the Pacific Ocean and his gravel from the Carmel River. His team of horses and his wagons became a familiar sight in the area. People turned to him for assistance when they needed help. When the surf piled up the sand and blocked the mouth of the river causing the water to back up and flood the artichoke fields, the farmers called on Murphy who took his earth scraper and a team of horses to open up the channel. When high winds lashed the area and threatened to topple trees, Murphy came to the rescue by tying a sturdy rope around several closely grouped trees, thereby enabling the trees to reinforce each other and resist the force of the wind. He also helped to plant trees in Carmel to stabilize the soil exposed by building activity, and to prevent the soil from being washed into the sea by the heavy rains.

As Murphy's own busness grew, he added more carpenters, stone masons, plumbers, electricians, plasterers and painters to his staff. He needed administrative and managerial help, so he hired J.O. Handley as his General Manager. Handley remained in this capacity until he began his own construction supply business, Handley and Handley (later becoming H&H). While most of the structures that Murphy erected were of his own design, he was also the contractor for a number of well known architects - Julia Morgan, Bernard Ralph Maybeck, and Robert Stanton among them. In designing his buildings, Murphy would talk to the customer, visit the site to get a visual image of the proposed structure on the site, and then go home and put it on paper. His designs were simplified drawings, but were complete and accurate enough so that major changes could be made. Murphy was a most active and prolific builder in the area and did as much to give Carmel its character as any other single person. Handley has stated "that Murphy built more than half the houses in Carmel."

Among his most notable structures are the Pine Inn, which he completely remodeled with his own design, the La Playa Hotel, the Carmel Highlands Inn, the Carmel Art Association, the Holiday House, the Carmel Texaco Station, the Sundial Lodge, the Farley Building, the Carmel City Hall (originally All Saints Episcopal Church), and the Dansk Building. The Harrison Memorial Library was partially designed by Bernard Ralph Maybeck and constructed by Murphy. However, there are no known plans of the library to be found. According to Murphy's daughter, Mrs. Rosalie Gladney, Bernard Maybeck who lived in San Francisco, would come down periodically from the city, view the progress, consult with Murphy, and return to the city on the afternoon train. It is generally conceded that Murphy had as much to do with the design of this building as Maybeck.

The Mary Dummage Shop is an excellent intact commercial building that meets the criteria set forth in the CHCS 1997 under architectural and economic development.

b. Builder: T. A. Oakes

B10. Significance: Theme: Period of Significance: Architectural Development in Carmel

Property Type:

Area: Carmel-by-the-Sea

CR#1 Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Oakes Building qualifies under Criteria No. 1 of the California Register as historic because it is common wall to the T. A. Oakes building of 1922 that housed the Post Office, City Hall, Police Department and Council Chambers in the 1920-30s. It does not meet Criteria #3 because of a remodel of the upstairs window bays in 1997 from 2 over 1 paired double hung windows to arched fixed pane French style casement windows. The lower facade reflects the original design by Thomas Morgan, brother of artist Mary DeNeal Morgan, who also designed the earlier T. A. Oakes building. Thomas A. Oakes was a contractor from Santa Cruz who also helped construct the city streets. A dispute over the title of the adjacent T. A. Oakes building may have led to the second building's construction. The lower facade retains the original inset angled display windows, central doorway framed by large pilasters, and a painted horizontal transom window frieze over the commercial shops with side framing pilasters. The remodeled upper facade has a low hipped Spanish tiled roof and simple comice above the four projecting window bays. The common wall (south) T. A. Oakes upper facade shows the original window details of the Oakes Building. The mixed use of commercial (lower) and apartment (upstairs) is found in many downtown Carmel buildings of varying designs. A variety of owners from Lester Roberts (1926), J. R. Sprague (1939) to TyreeFord (1940s) have utilized the commercial spaces for a bakery, hardware store, candy store, and art galleries. Both the T. A. Oakes and Oakes buildings are significant for their historical elements and as an architectural (pair) since both have intact complimentary elements of the original designs. However, as separate buildings they do not meet the criteria under architectural development set forth in the CHCS (1997).

B10. Significance: Theme: Period of Significance: Architectural Development of Carmel 1880-1940

Commercial **Property Type:**

Area: Carmel-by-the-Sea

CR#1

Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The T. A. Oakes Building qualifies under Criteria No. 1 of the California Register as historic because it served as both the Post Office (1922-1934) and City Hall, Police Department and Council Chambers. The building does not qualify under architecture Criteria #3 because the ground floor facade was extensively altered in 1959 by Elston and Cranston. The upper floor facade is intact. The adjacent (North) Oakes Building (1923) is common wall to the T. A. Oakes Building and it has its lower facade intact while the upper facade was aftered in 1997. Therefore both buildings display elements of the original building's facades as a pair but not as complete in themselves. The design was created by Thomas Morgan, the brother of artist Mary deNeal Morgan, and the builder was Thomas A. Oakes of Santa Cruz. A dispute over title to the property between Morgan and Oakes was major news in Carmel in 1923.

Later tenants were Dr. Hollison and Halle Samson, the "Empress of Der Ling," an importer of Chinese artifacts who owned the building in 1959 when the lower floor remodel was completed. The two-story mixed use concept is common in downtown Carmel within the context of many different architectural styles ranging from Western storefront, Victorian, Tudor and Spanish Colonial Revival. The T. A. Oakes Building meets historical Criteria #1 set forth in the California Register but does not meet the criteria for architectural significance as set forth in the CHCS 1997.

Property Type:

Carmel by-the-Sea

Applicable Criteria: CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The La Ribera Hotel is significant under California Register criterion 3, in the area of architecture as an excellent example of Spanish Eclectic commercial design by the Oakland architectural firm of Blaine & Olsen, and as a significant contributor to a potential Carmel downtown historic district. It is also significant for its 1949 addition, the earliest known Carmel design by noted California architect, Gardner Dailey.

The La Ribera Hotel was constructed two years after Oakland architects Roger W. Blaine & David Olsen had completed its neighboring business block to the east, La Giralda, or the Kocher Bldg. Dr. Rudolph Kocher, one of Carmel's two physicans at the time, was able to fund the project through his patron, Grace Deere Veile. Mrs. John S. Ball, a popular and competent hotel manager who successfully operated the Lincoln Inn on the site prior to the new construction, continued with the management of La Ribera. The new hotel offered its guests both high tea, and wine tasting, and had a regularly scheduled series of music recitals each Sunday evening, for guests and members of the community.

The building itself was designed to compliment the existing Kocher bldg., and another Blaine & Olsen project, the El Paseo Bldg., at the NE cr. of Dolores and 7th. In concert, the three Spanish Eclectic buildings form the most cohesive ensemble of period revival style commercial properties in Carmel. From the SW cr. of Lincoln & 7th., the scale, massing and proportion of the group reads like a classical Spanish hill town. The accuracy, and attention to detail in the application of the Spanish Eclectic decorative volcabulary, can be attributed to a visit to Spain by the architectural partnership. Notable is the treatment of the central Moorish tower, tying the varied elements of the hotel complex to a visual anchor. The composition of the west facing facade, w/its diagonal connection of large & small columned openings, and impressive cast-in-place Baroque entry is particularly effective.

Date 2/13/2003

P3. These wings step up the rising 7th Ave. slope connecting the hotel visually w/its Spanish Eclectic neighbor, the Kocher Bldg., at the NW cr. of Dolors & 7th. The building frontages along the north side of 7th Ave. between Lincoln and Dolores read like a Spanish hill town. Fenestration is irregular, w/paired arched window openings in the tower, and along the upper floor of themain building block, secondary elevations have multi-paned steel casement type windows, including the 1949 addition at the NW cr. of Lincoln & 7th. Several cloth awnings were added along the ground floor elevation in 1969. Iron balconies were added to the rear (east) elevation in 1995. The hotel is sited close to the sidewalk, along Lincoln and 7th Ave., behind planting beds of low shrubbery and flowers, w/a screen of low, well maintained street trees.

B6. interior remodel 2000 (CBP #00-28); restroom add. to north 2003 (CBP #02-55).

B10. Of particular interest is the 1949 two-story addition at the NW cr. of Lincoln & 7th Ave. This is an early period design by noted San Francisco architect Gardner Dailey, known more for his Bay Area modernist work. Dailey's familiarity with the Spanish Eclectic mode came in part from his experience as a plan checker for S.F.B. Morse at Pebble Beach, where Spanish/Mediterranean residential design was a requirement until 1937. Gardner Dailey (1885-1967) was educated at U.C. Berkeley, Stanford, and Heald's School of Engineering. He also studied landscape design. Dailey gained further experience working in several San Francisco architectural offices before establishing his own practice in 1926. He was influential in the residential field in the pre- and post WWI decades. His known Carmel area designs include the Grace Deere Velie Metabolic Clinic (1930) and his own home (1945) on Ocean Ave. Blaine and Olsen designed a number of the best Spanish Eclectic commercial buildings in Carmel in the late 1920s. They had been in partnership w/Wilson J. Wythe of Berkeley when Wythe died in 1926. The pair continued the partnership, concentrating on Spanish Eclectic design, in Oakland, Santa Barbara and Carmel, prior to the Great Depression. Little is known of the firm after 1930. while Dr. Kocher survived the effects of the Depression, his hotel did not. It went into receivership in 1930. The hotel was reopened by A.G. Wood, former manager of Monterey's San Carlos Hotel. The La Ribera retained its original name until 1960s, when the aging hisiness was retitled Cypress West. It has been the Cypress Inn since the 1980s. In spite of minor exterior changes over time, the La era Hotel continues to evoke a strong sense of time, place, feeling and association. Many couples who spent their wedding nights in tower room of the hotel are repeat visitors, and anyone who knew the hostelry in the 1930s and 1940s would easily recognize the La Ribera Hotel today. It clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Monterey County Trust and Savings Bank qualifies under California Register Criteria #3 as an example of the "Mission Revival Style" designed by architects H. H. Winner Co. of San Francisco and built by local contractor Hugh Comstock and subcontractor M. J. Murphy. The prominent Mission Style elements on the main facade are: 1) an overhanging Spanish tiled gabled roof with carved wooden elbow corbels set within a curving molded scalloped frieze; 2) the inset central quatrefoil window. The molded arched entryway and inset arched windows with low wrought-iron railings are also derived from the various California

The Mission Style became popular in the 1880s as an offshoot of restoration efforts of preservationists such as Harry Downie at Carmel Mission, and was primarily expressed in applying mission details to a wide variety of commercial and civic structures throughout the state as a homage to the mission heritage.

This building also represents the expansion of Hugh Comstock's building styles from the Fairty-Tale houses into the realm of commercial building construction and design.

B. 10. Significance (Continued from Page 2)

HUGH COMSTOCK

Hugh Comstock was born on a ranch in Evanston, IL in 1893, the youngest of seven children. In 1907, at the age of 14, Hugh moved to Santa Rosa, CA with his family. His talent for drawing was a natural one which seemed to run in the family. His sister also an artist, was married to Carmel artist George Seideneck. In 1924, Comstock visited his sister in Carmel, and through her met Mayotta Browne. Hugh stayed on in Carmel, and a short time later he and Mayotta were married. He found that his bride was a successful business woman who designed and made rag and felt dolls she named "Otsy-Totsys." Mayotta asked Hugh to build a cottage just for the dolls - "a fairy house in the woods".

Comstock, utilizing his flair for drawing, designed a charming, whimsical cottage for the dolls which he and Mayotta built with loving care and attention to such details as mixing pine needles with the plaster, and troweling the plaster over burlap on the walls to create uneven, strongly textured surfaces. The "Doll's House" created a sensation with Carmel residents, many of whom wanted Comstock to build them similar structures for homes and businesses. Thus Hugh Comstock found himself launched into an exciting new profession. He became a designer and builder of a new kind of fantasy architecture, totally different from the more commonplace, boxy summer cottages of board and batten that comprised the majority of the Carmel architecture.

Comstock set up an office adjoining his home, and for the next few years concentrated on designs for his "fairy-tale" cottages. More traditional craftsmen were inclined to balk at his unconventional methods, nevertheless, when the Tuck Box Tea Room was built in 1926, the <u>Carmel Pine Cone</u> fancifully dubbed Comstock as Carmel's "Builder of Dreams."

In the late 1920s, just before the Great Depression, he became more pragmatic, and bowed to the demands of residents, who wanted larger, more luxurious and traditional structures for year-round homes. Comstock remained true to his own principles of concern for the environment and to his love for natural native materials. His original designs for luxury homes included the use of chalk rock, natural woods and hand-hewn timbers, terra cotta tile, redwood shakes, and hand designed fixtures. An interesting innovative idea of his was the use of rough lumber which was first painted, then the paint was partially removed for a flecked look for the interior walls. Comstock's interest in the use of local clay for adobe bricks to reduce building costs led him on a search for bricks that would not absorb water and disintegrate. He learned that stabilized, waterproofed adobe bricks had been made, but since he was unable to get any, he invented his own formula. His and his associates started their own adobe brick plant in Carmel Valley, and called their bricks "Bitudobe".

The invention of Bitudobe led to the development of a system in which heavy grooved bearing beams are placed at intervals in a single layer of modern, stabilized adobe brick walls, and locked together with waterproof mortar. Comstock then devised a special mixture to insulate and waterproof adobe roofing, and a type of adobe paint that would keep the liquid asphalt which waterproofed his adobe bricks from bleeding and discoloring the paint.

Mayotta and Hugh Comstock were both known for their generosity, kindness, and warmth. Hugh was genuinely well-liked and respected by his associates. He also gave his time freely to the community, serving more than 10 years as Chairman of the Carmel Sanitary board of directors and as President of the Carmel School Board where he also acted as a consultant to the architects who planned. Carmel High School. In 1946, Comstock became a committee member of the then newly-created Carmel Planning Commission.

Hugh Comstock died unexpectedly on June 2, 1950.

B. 10 Significance (Continued from Page 3)

By the late 1920s, M. J. Murphy had long been Carmel's most prolific builder who had produced many commercial and residential designs with the Mission Style motif.

M. J. MURPHY - BUILDER, CONTRACTOR

Michael J. Murphy was a pioneer builder and contractor in the earliest era of Carmel, and therefore helped to shape the entire architectural character of the village. He was born in Minden, Utah in 1884 of hardworking parents of limited means. Young Murphy managed to finish high school, but then had to begin to earn a living as a house painter. In 1902, he visited Carmel and became attracted to the area. He married in 1904 and returned to Carmel to live. His son Frank was "the first white boy child" to be born in Carmel.

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

At the same time, Franklin Devendorf of the Carmel Development Company had purchased much of the land in Carmel, and began to subdivide and sell the parcels. Devendorf knew Murphy and had taken a liking to him. Therefore, when he needed more houses for his lots to satisfy his prospective buyers, he helped Murphy set up a construction business. Because of his passion to be the best, Murphy went to great lengths to make certain that his structures were solidly built of quality materials. As his reputation in this regard blossomed, more and more people wanted a Murphy house. Murphy obliged and built houses all over the Monterey Peninsula, using his own designs and doing much of the work himself. In 1914, Murphy established his own contracting business, opened up a lumber and building supply store and hired many workers.

To assure a supply of crushed rock and gravel, Murphy erected a rock crusher in Carmel Valley. He obtained his rock from the shore of the Pacific Ocean and his gravel from the Carmel River. His team of horses and his wagons became a familiar sight in the area. People turned to him for assistance when they needed help. When the surf piled up the sand and blocked the mouth of the river causing the water to back up and flood the artichoke fields, the farmers called on Murphy who took his earth scraper and a team of horses to open up the channel. When high winds lashed the area and threatened to topple trees, Murphy came to the rescue by tying a sturdy rope around several closely grouped trees, thereby enabling the trees to reinforce each other and resist the force of the wind. He also helped to plant trees in Carmel to stabilize the soil exposed by building activity, and to prevent the soil from being washed into the sea by the heavy rains.

As Murphy's own business grew, he added more carpenters, stone masons, plumbers, electricians, plasterers and painters to his staff. He needed administrative and managerial help, so he hired J. O. Handley as his General Manager. Handley remained in this capacity until he began his own construction supply business, Handley and Handley (later becoming H&H). While most of the structures that Murphy erected were of his own design, he was also the contractor for a number of well known architects - Julia Morgan, Bernard Raiph Maybeck, and Robert Stanton among them. In designing his buildings, Murphy would talk to the customer, visit the site to get a visual image of the proposed structure on the site, and then go home and put it on paper. His designs were simplified drawings, but were complete and accurate enough so that major changes could be made. Murphy was a most active and prolific builder in the area and did as much to give Carmel its character as any other single person. Handley has stated "that Murphy built more than half the houses in Carmel."

Among his most notable structures are the Pine Inn, which he completely remodeled with his own design, the La Playa Hotel, the Carmel Highlands Inn, the Carmel Art Association, the Holiday House, the Carmel Texaco Station, the Sundial Lodge, the Farley Building, the Carmel City Hall (originally All Saints Episcopal Church), and the Dansk Building. The Harrison Memorial Library was partially designed by Bernard Ralph Maybeck and constructed by Murphy. However, there are no known plans of the library to be found. According to Murphy's daughter, Mrs. Rosalie Gladney, Bernard Maybeck who lived in San Francisco, would come down periodically from the city, view the progress, consult with Murphy, and return to the city on the afternoon train. It is generally conceded that Murphy had as much to do with the design of this building as Maybeck

B. 10. Significance (Continued from Page 4)

The Monterey County Trust and Savings Bank building was converted in 1967 into the <u>first</u> Carmel Museum of Art. The building has housed the China Art Center for the past few decades.

The building's design also relates to the Kocher Building, El Paseo, the Isabel Leidig Building, and the Draper Leidig Building as the best intact preserved examples of Mission and Spanish Revival commercial buildings in Carmel and are situated on Dolores Street between Ocean and 7th.

H. H. Winner and Co. also designed the Spanish Revival Style bank that is occupied by Wells Fargo on Alvarado and Franklin in downtown Monterey.

The Monterey County Trust and Savings Bank meets the criteria established under Architectural, Economic and Cultural development as stated in the Carmel Historic Context Statement of 1997.

Period of Significance: 1903-1940 Property Type: commercial bldg.

Date:

Applicable Criteria: CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Kocher Bldg. is significant under California Register criterion 3 as the best commercial example of the Spanish Colonial Revival substyle of Spanish Eclectic architecture in Carmel. Its detailing throughout is of high artistic value, and the wrought iron work of Francis Whitaker is the best remaining in the village. It is also significant as the first steel-framed concrete commercial building in Carmel. The steel structural system was derived from a system designed for the rebuilding of Tokyo, Japan after the devestating 1923 earthquake. Fire and earthquake resistant, the system included an eight inch width between the exterior and interior walls w/four inches of concrete on each side of the air space. Each of the three visible elevations are clearly identified as to function, within a carefully orchestrated arrangement of elements from the decorative vocabulary of old Spain. The Dolores St. elevation w/its rhythmic arcade of show windows is all business. The extra arched window that wraps around to the SW balances the entry composition in the polygonal tower, inviting the visitor in. The south side elevation is clearly residential and private, its recessed entrys and enclosed rear garden protected by iron grille work and stucco screens. The rear of the building, w/its handsome second story balcony is again residential in character, affording the residents both distant views of the sea and a full appreciation of the garden court below. The upper floor along Dolores is typical of a Spanish city, w/ French doors opening out onto a balcony with wide views of life on the streets.

The designers, Roger W. Blaine & David Olsen, of Oakland were Jr. partners w/ Wilson J. Wythe an architectural instructor at U.C. Berkeley. Wythe died in 1926, suggesting that the Kocher commission was actually by Blaine & Olsen, who had recently returned from an extended trip to Spain, and were well acquainted with its historic precedents. Blaine & Olsen would go on to design the El Paseo Bldg., across Dolores from the Kocher, later in 1927. They would then build what is now the Cypress Inn. at Lincoln & 7th, in 1929, forming the most cohesive ensemble of period style commercial properties in Carmel.

Kocher Building

Date 9/4/2002

□ Continuation □ Update

P3. The second chimney is found at the junction of the polygonal tower and the s/side elevation. It is an exterior eave wall type, and projects slightly from the second floor w/the same decorative corbeling as found on the bay at the SW corner. It was originally capped by a tiny, steeply pitched Spanish tile roof, which is no longer present. The visible roof surfaces were originally capped w/red Mission tile, but are now covered in composition shingle. The rear (west) elevation of the building is characterized by a well-articulated wood balcony on the second floor, facing the sea. Below is an enclosed patio, behind a tall stucco fence w/ some openings containing highly ornate dragon-headed wrought iron grille work by Francis Whitaker. Whitaker's work also appears on a rounded balconet on the south-side stairway, and in a large window grille on the first floor of the south side-elevation. A recessed arched entry, in a Moorish design w/decorative tiles and star- pierced stucco screen, is found on the ground floor toward the west, along the south side-elevation. There are a pair of Gothic window arches on the second story of the south side elevation, between the open landing and the polygonal tower. The Dolores Street elevation (east) is characterized by a series of three, tall arcaded windows. They turn around the angled from entry w/one similar window on the SE cr of the south side-elevation. A raised, decorative stucco band, outlining the arches is found above them along Dolores Street. Above this feature is a partial-width wrought iron balcony, set in its base w/decorative Spanish tiles that can be viewed from the street. Three sets of wooden French doors open out onto the balcony, which retains the metal workings for cloth awnings. There were eyebrow cloth awnings on the arched openings below in 1929 (see below). The main entry at the SE cr. of the building is recessed behind a shaped arched opening, and has low Spanish tiled panels w/show windows above. The entry is capped w/a wood sign identifying it as the Dolores Pharmacy, an earlier use. Above that is the slightly stepped base of one of the facets of the polygonal tower. Fenestration is otherwise irregular, w/ multi-paned steel casement windows in varying sizes throughout, and several wooden French doors. The Kocher building, with its El Paseo neighbor across Dolores St. is a major visual anchor for this portion of the proposed downtown historic district. Noted architectural historian, Dr. David Gebhard described it as, "Certainly the strongest Spanish Colonial Revival commercial building in Carmel."

B10. The design team employed local iron-master Francis Whitaker to do the wrought iron work on the building. Whitaker, a student of Samuel Yellin would go on to become one of the foremost practitioners and teachers of decorative ironwork in the United States.

Rudolph A. Kocher, the building's owner, was a key figure in the development of health care in Carmel. In the late 1920s he assisted ace Deere Velie Harris, a wealthy heiress, in establishing a Metabolic Clinic at the NE edge of Carmel, which later became the Carmel aspital. The Blaine & Olsen partnership did not survive the Great Depression, and went out of business shortly after 1930.

e Kocher Building is an important contributor to the proposed Carmel Downtown Historic District. If, when reroofed, it is done with the appropriate Mission tile, it would easily qualify for the National Register of Historic Places. The Kocher Bldg. clearly reflects the findings of and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

two-story commercial

Applicable Criteria:

CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) Las Tiendas is significant under California Register criterion 3, as the only, and best example of Spanish Eclectic commercial design by the noted architectural firm of Swartz & Ryland in Carmel. The two-story commercial bldg, was built for well known Carmel realtor Ray DeYoe. It was the first commercial building in Carmel to have steam heat, and the reinforced concrete construction reduced the insurance rates of its immediate neighbors by one-half. Nearing completion in March of 1930, The Carmelite described the building, noting that, "Two stores will face on Ocean. Four shop faces will front the patio. Four professional offices will be provided for by the rooms upstairs." De Yoe's Carmel Realty Co. would occupy the arcaded wing wall space to the east. The owner had yet to choose a name for the complex, but thought he might find something appropriate on a planned trip to Mexico. The architects, Fred L. Swartz & Columbus J. Ryland, of Fresno, had recently opened on office in the San Carlos Hotel in Monterey, and were designing a major commercial block in the Spanish Andalusian mode for Thomas A. Work, in Pacific Grove when DeYoe approached them for his building. The design they provided was in keeping with the recent popularity of arcaded romantic revival shop buildings in Carmel, particularly the El Paseo and La Rambla buildings, completed in the preceding two years, by Blaine & Olsen and Guy O. Koepp, respectively. All three were of Spanish Eclectic design, with arcaded interior passageways leading to some form of courtyard, or through passage between blocks. The combination of these Southern European commercial blocks and the earlier medievally influenced Northern European business frontages, further west along Ocean Ave. gave Carmel the decidedly eclectic commercial architectural character that continues to draw visitors worldwide to it.

Las Tiendas Bldg.

Date 2/15/2003

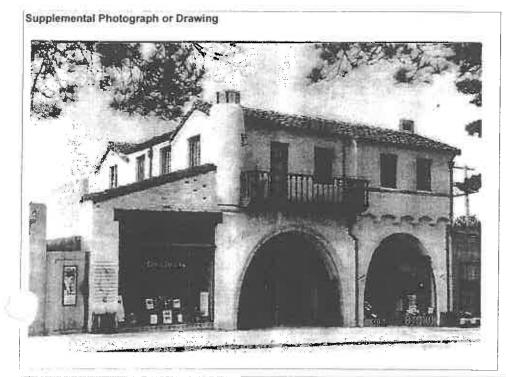

⋈ Continuation ⊢ Update

P3. The one centered on the building is the main opening, to the interior courtyard and passageway. The one to the west fronts a commercial shop, and is glazed w/plate glass, w/a low base of colored Spanish tile. The second-story slightly overhangs the show window, w/decorative concrete corbeling at is base, and two multi-paned steel casement type windows above. The second storyover the central arch has an open, wood balcony w/turned wood balusters. There is a single glazed panel door to the east, leading to the balcony, and a single steel casement window to its west, matching those found on the west side of the elevation. Just inside the covered entry arcade there is an open, straight-run stairway leading to the upper floor on the west side. The concrete stairs are tile covered w/some colored Spanish tiles in the risers. The rail is an excellent example of open wrought iron work. On the east side there is an angled shop entry. It is round ached w/a circular vent screen above. A handsome wood display case, w/colored Spanish tile base, runs along the east wall toward the courtyard. Several other shops open onto the covered corridor, which is paved w/randomly coursed squares of red tile. There is also patterned stenciling on the interior overhead of the entry. The edges of the courtyard are planed w/tall shrubbering and hedging. Las Tiendas fronts the sidewalk along Ocean Ave.

B10. Architect Fred Swartz was a graduate of the University of Pennsylvania; his partner, Columbus J. Ryland, had studied engineering at the California Normal School of Arts and Crafts and at the University of Tolouse, in France. Ryland joined Swartz in Fresno in 1919, at the end of WWI. They maintained their partnership until Ryland went into private practive in 1931. Ryland is best remembered for hisdesignof the Sunset School auditorium in the early 1930s.

M.J. Murphy owned the oldest established contracting firm in Carmel, and is credited with designing or constructing more than 350 structures over his professional life in the community, many for noted California architects. Artie Bowen, another well-known Carmel builder and Murphy employee at the time, worked on Las Tiendas as well.

The only exterior change noted from the Las Tiendas 1932 appearance is a panel placed over the transom windows on the arcaded wing wall shop to the east. Anyone who was familiar with the building complex over time would easily recognize Las Tiendas today. It clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

B.10 Significance (Continued from Page 2)

This building was built for Robert and Isabel Leidig, whose daughter Jean married Raymond Draper. Isabel was the daughter of John Martin, who with his brother Robert purchased and successfully operated what is now the Mission Ranch, around 1860. Isabel was the youngest and only girl of the seven Martin children. The Leidigs had two boys, both World War II casualties, and one daughter, Jean She later operated the exclusive sportswear shop in the Las Tiendas building known as Draper's. This shop later became Robertsons. Over the years the building has remained much the same and is still owned by the original family. There have been many tenants including: jewelry stores, art galleries, ladies apparel, real estate offices, photo galleries and gift shops. The original Robert and Isabel Leidig home on this site was moved from this location to the northwest corner of Fifth Avenue and Dolores Street in 1929 to make the original site available for the new building.

The Draper Leidig Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of Architectural Development. (Page 31)

B.12. References (Continued from Page 2)

4. CHCS, 1997

P3. Description (Continued from Page 1)

decorative tiles accent windows and entrances on the rear patio, stairs, and the recently enclosed elevator tower, tying the elevations together. Carved wood pergolas frame the main entrance of the upstairs apartment off the roof patio at the rear of the building.

From left to right, the second story residence shows recessed French doors with a decorative wood railing, a recessed balcony with a patterned red tile railing. There are three sets of French doors leading out, two decorative lamps on the walls and three rainspouts extending out through the facade. Next, there are two recessed casement windows followed by French doors leading out to a French balcony of black metal. A red concrete passagway at the right leads to the decorative wrought iron gate at the rear of the residence. There are exterior stairs which lead to the patio and the entrance. The passageway continues to the back of the building and to the rear of the property where there is another passageway to Ocean Avenue via an adjacent property.

The <u>rear</u> one-story service space has metal doors with security glass panes and industrial sash windows. A steel staircase leads to the second story at the inner comer of the front and back sections. At the southwest comer, rises a slim cone-shaped stucco column topped by a decorative lamp and finial. An elevator tower with a sympathetic stucco wall treatment provides disabled access to the upstairs apartment. The elevator tower is <u>not visible</u> from the street.

At the rear of the property, behind a wood rail fence, is a garden and an ivy covered stucco wall which delineates the back property boundary. Behind a wood rail fence at the edge of the Dolores Street sidewalk, is an earthen plot containing two sizeable Monterey pines which front the two right hand shops.

CR#3

Property Type: Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Isabel Leidig Building is significant under California Register Criteria #4 in the area of commercial architecture development in downtown Carmel, mixing the Monterey Colonial style with the Spanish Colonial Revival. Although the original building permit is lost, certain details point to the design being created by builder M. J. Murphy. The second story veranda is derived from the Larkin House in Monterey (1834) and was used by Murphy in many houses in the Carmel area (see "Structures of the Period." M. J. Murphy cc. 1929). Also, the arched windows on the north and south gabled ends are similar to the arched windows of the Harrison Memorial Library that Murphy built in collaboration with Bernard Ralph Maybeck in 1927. Additionally, the Isabel Leidin Building is shown in a 1920's Panoramic View Photo on the east side of Dolores between Ocean and 7th in which the building to the south is also by Murphy, but all the others are by different architects and builders in the M. J. Murphy publication "Structures of the Period." The local historical significance centers around the Leidig and Martin families that intermarried and still own the building.

In the mid-1920's Robert Leidig and his wife Isabel owned a rather large piece of property on the east side of Dolores Street. Their family home was on this piece of properly and the total piece encompassed what is now four large lots. In 1925, isabel is listed as owner of, at least, the southernmost lot. Isabel (Bell) was the daughter of John Martin, who with his brother Robert, purchased (ca 1860), and for many years very successfully operated what is known today as the Mission Ranch, Isabel was the yougest and only girl of the seven Martin children born to John and his wife Elizabeth. When Isabel became a young woman of marriageable age in 1910, the two notable families of Leidig and Martin were united by the marriage of Isabel to Robert Leidig. (See Continuation Sheet)

The couple had three children, two boys and a girl. Sadly, both of the boys were killed in World War II but the daughter, Jean, survived to marry Raymond Draper. Isabel Leidig is listed as the original owner of this two-story building which was built, according to City records in 1925.

The Isabel Leidig Building clearly reflects the finding of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of architectural development and economic development.

The W. C. Farley building is significant under California Register Criteria #3 in the area of commercial architectural development in downtown Carmel and as a work by local builder/contractor M. J. Murphy. The design features elements of the Spanish Revival Style in the tiled side gabled roof and the arched transom windows of the two symmetrical front offices flanking the central exposed wood lintel commercial space. A Carmel stone veneer showcases Murphy's sophisticated handling of the material, especially in the wedge shaped blocks outlining the low arched windows. Similar arched windows are found on the adjacent Isabel Leidig Building (1925) and the Harrison Memorial Library (1927). The property housed a cleaners and cleaning plant for more than 60 years, and only a few cosmetic changes have occurred to the front stores' entrances, mainly in the form of signage and awnings. The building is one of several on Dolores Street between Ocean and 7th that best express the commercial architecture design in Carmel in the 1920's. The W. C. Farley Building clearly reflects the finding of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of architectural development and economic development.

B10. Significance: Theme:

Architectural Development in Carmel

Area: Carmel-by-the-Sea

Period of Significance:

1903-1940

Property Type: Commercial Building

Applicable Criteria:

CR#3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

This building qualifies under California Register Criteria #3 in the area of architecture as an expression of the Spanish Colonial Revival Style and the work of contractor-builder Earl Percy Parkes. The Spanish Colonial Revival was paramount in the 1920's throughout California. This building is also part of a row of commercial designs on Dolores Street between Ocean and 7th that best expresses Carmel's historic commercial development in the 1920's.

The Spanish Colonial Revival Style became very popular in California after the Panama Pacific Exposition in 1916 in San Diego featuring buildings designed by Bertram Grovsner Goodhue that mixed Mediterranean architectural details with elements of Baroque architecture. The style spread to Santa Barbara, California after the 1922 earthquake in the work of George Washington Smith and Carlton Winslow Sr. and in the development of Pebble Beach by Samuel Morse in the 1920's where all houses were mandated to follow Mediterranean design elements. Architects such as Addison Mizner, Bernard Mayhew, Clarence Tantau, George Washington Smith, Lewis Hobart, Bakewell and Brown and local builders Hugh Comstock and M. J. Murphy produced buildings conforming to this style.

B 10. Significance (Continued from Page 2)

Earl Percy Parkes, better known to his friends by his second name of Percy, was a native of the old Buckeye state but was a California resident for years. He was born in the city of Port Clinton in Ottawa County in northwestern Ohio, on May 2, 1884, the son of William H. and Louise (Barnes) Parkes. His father was a well-to-do shoe merchant in Port Clinton and was long regarded as one of the substantial citizens the community. Reared in Port Clinton, an attractive old town on Lake Erie, Percy Parkes attended schools there and was graduated from high school. He also received a good business education. As a young man, he worked with the passenger department of the Rock Island Railroad Company. It was during his years as a traveling excursion agent for the company that he came to California. After becoming a resident of California he entered the university at Los Angeles to study law. However, before completing the course and taking the final examinations, Parkes became connected with the extensive realty operations then being carried on in Los Angeles, and in 1911 established himself in that city as a building contractor. Mr. Parkes was engaged as a builder in Los Angeles for seven or eight years until he transferred his operations to Carmel in 1919 where he was quite successful. The considerable increase in the population and material interests of the village during that time owed much to his enterprise and energetic methods.

Mr. Parkes was twice married and by his first wife had a son, Earl Percy Jr. He and his second wife, Jeannette Hoagland, a native daughter of California, had a son, William Henry. Mr. and Mrs. Parkes took an interest in Carmel's general social and civic activities. Mr. Parkes was a member of the Masonic order and the Monterey Gun Club.

Among the progressive building contractors who did so much toward the advancement of the material interests of Monterey County, Earl Percy Parkes is entitled to special recognition for the fine character of work he did. During his residency in Carmel, he was in charge of a greater part of the really substantial building operations carried on in the community. The evidence of his craftsmanship is visible in the many notable residences erected during that time, and not a few of the more substantial business buildings, including a fine business block that he owned. His good taste and enterprise, coupled with up-to-date construction methods, characterized all these operations, and the attractive appearance of beautiful Carmel-by-the-Sea owes much to this energetic builder.

(See Continuation Sheet 2)

B. 10. Significance (Continued from First Continuation Sheet)

Although the building has housed many different varieties of businesses, the first occupants were the most memorable (George Vining's Meat Market and the Mingo's Carmel Grocery) and later McKinstry's Carmel Grocery. The businesses remained, serving residents, through the 1960's and 1970's before the commercial climate changed. But in the early years, its location on Dolores Street was once quite the active hub of Carmel with the temporary police department across the street, above a bakery, the post office nearby in the Oakes Building, and the Pine Cone in the adjacent De Yoe Building. The significance of this small commercial building is that its durable construction of sturdy materials of stuccoed walls and red tile roof has allowed the structure, which is virtually unchanged, to withstand the passage of the years.

The Percy Parkes Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of architectural development and economic development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

This building qualifies under California Register Criteria #3 in the area of architecture as a significant example of the Tudor Revival style applied to commercial building in Carmel and the eclectic styles of builder M. J. Murphy, The Tudor Revival, with its steep gabled roofs and dormers, exposed faux-beams, stuccoed walls and prominent chimneys, was first introduced to Carmel by Eugenia Mabury in 1905 with the Grace McGowan Cook House located on 13th Street between San Antonio and Carmelo. The style was applied to commercial design by Murphy in the DeYoe-Pine Cone Building and Herbert Heron's 7 Arts Building built by Percy Parkes at the S.W. comer of Ocean and Lincoln in 1925. Amelia Gates also used the style at the S.E. comer of Ocean and Monte Verde in 1927.

The De Yoe Building is also part of an intact row of commercial buildings on Dolores Street between Ocean and 7th built in the 1920s that show the diversity of commercial designs in Carmel. The block was also the heart of commercial Carmel in the 1920s with the post office, the Pine Cone, Carmel Cleaners, an auto dealership and Vinings Meat Market all situated in this block. The De Yoe Building (Tudor) along with the Carmel Cleaners (Carmel Stans Veneer) and the Isabel Leidig Building (Spanish Revival) expresses the diversity of building styles that M.J. Murphy utilized in Carmel.

- 5. Seavey, Kent, "Grace McGowan-Cook House," D.P.R. Carmel HRI 2000
- B. 10 Significance (Continued from Page 2)

The businesses housed in the DeYoe Building are also significant. From 1925 to World War II The Carmel Pine Cone had its offices in the southern part of the building. In 1927, Dene Denny and Hazel Watrous established an art gallery in the northern space and a rear addition that later housed a stage for theatrical performances that propelled them into managing the First Theatre in Monterey and eventually establishing the Carmel Bach Festival. In 1950 the Studio Theatre was established out of a dance and art studio with restaurant facilities added in 1962. A Western Union office, numerous art galleries, antique shops, and restaurants have been tenants of the past 75+ years.

Ray De Yoe, the building's original owner-developer, was a State Assemblyman for Monterey-San Luis Obispo Counties in the 1920s.

The DeYoe Building clearly reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of Architectural, Economic, Cultural and Artistic Development.

CR#3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

Property Type:

The Tuck Box qualifies under the California Register Criteria #3 as the landmark Fairy-Tale Style commercial building designed by Hugh Comstock in 1926 that is internationally associated with the City of Carmel-by-the-Sea. Originally known as Sally's, built for Bonnie Lee, the Tuck Box features design elements such as: the steep gabled curving irregular shingled roof, rough textured stucco walls, faux-timber frame posts and beams, multipane irregular divided glass windows, and used brick irregular chimney mass that Comstock originally used on the "Doll's House" of 1924 for his wife's Otsy-Totsy Dolls. The style became synonymous with Comstock and many houses were constructed throughout the city. The Tuck Box reflects the only commercial application of the Fairy-Tale Style by Cornstock, although elements were utilized by other builders such as Pedro Lernos, Earl Percy Parkes, M. J. Murphy, Amelia Gates and J. D. Nichols. In the early 1980s, developer Craig McFarland utilized elements of the Tuck Box in a new commercial development at San Carlos and 6th which set off a neo-Comstock Cottage boom that is still evolving and an integral part of the design review concepts of the city. The Mary Dummage Shop, diagonally across the street (north end of Picadilly Park) was designed by Earl Percy Parkes just months after the Tuck Box was under construction and reflects many of the "Fairy-Tale" details. Pedro Lemos' building to the rear of the Tuck Box, built in 1929, followed the general aesthetic of the Tuck Box with a roof of slate shingles.

HUGH COMSTOCK

Hugh Comstock was born on a ranch in Evanston, IL in 1893, the youngest of seven children. In 1907, at the age of 14, Hugh moved to Santa Rosa, CA with his family. His talent for drawing was a natural one which seemed to run in the family. His sister also an artist, was married to Carmel artist George Seideneck. In 1924, Comstock visited his sister in Carmel, and through her met Mayotta Browne. Hugh stayed on in Carmel, and a short time later he and Mayotta were married. He found that his bride was a successful business woman who designed and made rag and felt dolls she named "Otsy-Totsys." Mayotta asked Hugh to build a cottage just for the dolls - "a fairy house in the woods".

Comstock, utilizing his flair for drawing, designed a charming, whimsical cottage for the dolls which he and Mayotta built with loving care and attention to such details as mixing pine needles with the plaster, and troweling the plaster over burlap on the walls to create uneven, strongly textured surfaces. The "Doll's House" created a sensation with Carmel residents, many of whom wanted Comstock to build them similar structures for homes and businesses. Thus Hugh Comstock found himself launched into an exciting new profession. He became a designer and builder of a new kind of fantasy architecture, totally different from the more commonplace, boxy summer cottages of board and batten that comprised the majority of the Carmel architecture.

Comstock set up an office adjoining his home, and for the next few years concentrated on designs for his "fairy-tale" cottages. More traditional craftsmen were inclined to balk at his unconventional methods, nevertheless, when the Tuck Box Tea Room was built in 1926, the <u>Carmel Pine Cone</u> fancifully dubbed Comstock as Carmel's "Builder of Dreams."

In the late 1920s, just before the Great Depression, he became more pragmatic, and bowed to the demands of residents, who wanted larger, more luxurious and traditional structures for year-round homes. Comstock remained true to his own principles of concern for the environment and to his love for natural native materials. His original designs for luxury homes included the use of chalk rock, natural woods and hand-hewn timbers, terra cotta tile, redwood shakes, and hand designed fixtures. An interesting innovative idea of his was the use of rough lumber which was first painted, then the paint was partially removed for a flecked look for the interior walls.

Comstock's interest in the use of local clay for adobe bricks to reduce building costs led him on a search for bricks that would not absorb water and disintegrate. He learned that stabilized, waterproofed adobe bricks had been made, but since he was unable to get any, he invented his own formula. His and his associates started their own adobe brick plant in Carmel Valley, and called their bricks "Bitudobe". (See 2nd Continuation Sheet)

State of California — The Resources Agency DEPARTMENT OF PARKS AND RECREATION CONTINUATION SHEET	Primary # HRI # Trinomial		
Page 4 of 5 Resource Name or #: (Assigned by recorder) Recorded by: Richard N. Janick	Tuck Box Date 10/8/2002 ⊠ Continuation ☐ Update		

B. 10 Significance (Continued from Page 3)

The invention of Bitudobe led to the development of a system in which heavy grooved bearing beams are placed at intervals in a single layer of modern, stabilized adobe brick walls, and locked together with waterproof mortar. Comstock then devised a special mixture to insulate and waterproof adobe roofing, and a type of adobe paint that would keep the liquid asphalt which waterproofed his adobe bricks from bleeding and discoloring the paint.

Mayotta and Hugh Comstock were both known for their generosity, kindness, and warmth. Hugh was genuinely well-liked and respected by his associates. He also gave his time freely to the community, serving more than 10 years as Chairman of the Carmel Sanitary board of directors and as President of the Carmel School Board where he also acted as a consultant to the architects who planned Carmel High School. In 1946, Comstock became a committee member of the then newly-created Carmel Planning Commission.

Hugh Comstock died unexpectedly on June 2, 1950.

PEDRO JOSEPH LEMOS

Pedro Joseph Lemos, painter, pastelist, etcher, illustrator, and lithographer, was born in Austin, NV on May 25, 1882. Lemos grew up on Myrtle Street in Oakland and was educated in public schools there. He studied art in San Francisco with Mary P. S. Benton, Harry Stuart Fonda, and at the Mark Hopkins Institute in 1900 under Arthur Mathews. He studied further in New York City at the ASL under George Bridgman, Arthur Down, and at Columbia University. Following his art training, he established a studio overlooking Lake Merritt in Oakland and soon began teaching at the University of California.

Beginning in 1911 he taught etching and decorative design at the San Francisco Institute of Art and served as director of that school from 1914-1917. Lemos then became director of the Museum of Art at Stanford University and held that position for many years. He was the author of Applied Art, Artists Scrap Book, Block Printing, and about 50 books on arts and crafts.

Lemos was a member of: California Society of Etchers (cofounder, 1913), Carmel AA (first president), Palo Alto AA, Bohemian Club, California PM Society. His work was exhibited at the Bohemian Club in the 1920s, PAFA, California Society of Etchers, Stanford University, 1928. His awards included: Honorable Mention PPIE, 1915, and gold medal for prints at the 1916 California State Fair. Works held: Bohemian Club, Stanford University, CSL, and Monterey Public Library.

Pedro Lemos died at his home in Palo Alto on December 5, 1954.

The Tuck Box clearly meets the criteria established in the Carmel Historical Context Statement under Architectural and Economic Development.

B9a. Architect: Pedro Lemos b. Builder: Louis Anderson-Kenneth Manning

Architectural Development in Carmel B10. Significance: Theme: Area: Carmel-by-the-Sea 1880-1940

Property Type: Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Lemos Building qualifies under California Register Criteria #3 as the only building designed by artist Pedro Joseph Lemos, the first president of the Carmel Art Association and one of the leaders and teachers of the Arts and Crafts Club. Lemos was a noted Bay Area artist and a member of the Bohemian Club.

The Lemos Building (1929) was designed in context with Hugh Comstock's adjacent Tuck Box (Sally's 1926). It features many of Comstock's Fairy-Tale Style details with a refined English Craftsman expression, especially in the use of irregular slate shingles and the undulating ridge line of the side gabled steep pitched roof. The design seems to have been Lemos' although he had the assistance of contractor Louis Anderson who had worked on other Lemos projects in the Bay Area. The Arts and Crafts tradition has manifested itself in Carmel mainly in small board and batten low gabled roof cottages. First Comstock, and then Lemos, added a more exaggerated Fairy-Tale like quality with the rough stuccoed walls, undulating shingle courses and irregular faux-timber frame wood beam diagonals and uprights. The Fairy-Tale style has become synonymous with Carmel-by-the-Sea and was revived in the 1980s by developer Craig MacFarland. It continues to be the most popular style for remodels and new home construction throughout the city and adjoining neighborhoods.

PEDRO JOSEPH LEMOS

Pedro Joseph Lemos, painter, pastelist, etcher, illustrator, and lithographer, was born in Austin, NV on May 25, 1882. Lemos grew up on Myrtle Street in Oakland and was educated in public schools there. He studied art in San Francisco with Mary P. S. Benton, Harry Stuart Fonda, and at the Mark Hopkins Institute in 1900 under Arthur Mathews. He studied further in New York City at the ASL under George Bridgman, Arthur Down, and at Columbia University. Following his art training, he established a studio overlooking Lake Merritt in Oakland and soon began teaching at the University of California.

Beginning in 1911 he taught etching and decorative design at the San Francisco Institute of Art and served as director of that school from 1914-1917. Lemos then became director of the Museum of Art at Stanford University and held that position for many years. He was the author of Applied Art, Artists Scrap Book, Block Printing, and about 50 books on arts and crafts.

Lemos was a member of: California Society of Etchers (cofounder, 1913), Carmel Art Association (first president), Palo Alto AA, Bohemian Club, California PM Society. His work was exhibited at the Bohemian Club in the 1920s, PAFA, California Society of Etchers, Stanford University, 1928. His awards included: Honorable Mention PPIE, 1915, and gold medal for prints at the 1916 California State Fair. Works held: Bohemian Club, Stanford University, CSL, and Monterey Public Library.

Pedro Lemos died at his home in Palo Alto on December 5, 1954.

HUGH COMSTOCK

Hugh Comstock was born on a ranch in Evanston, IL in 1893, the youngest of seven children. In 1907, at the age of 14, Hugh moved to Santa Rosa, CA with his family. His talent for drawing was a natural one which seemed to run in the family. His sister also an artist, was married to Carmel artist George Seideneck. In 1924, Comstock visited his sister in Carmel, and through her met Mayotta Browne. Hugh stayed on in Carmel, and a short time later he and Mayotta were married. He found that his bride was a successful business woman who designed and made rag and felt dolls she named "Otsy-Totsys." Mayotta asked Hugh to build a cottage just for the dolls - "a fairy house in the woods".

Comstock, utilizing his flair for drawing, designed a charming, whimsical cottage for the dolls which he and Mayotta built with loving care and attention to such details as mixing pine needles with the plaster, and troweling the plaster over burlap on the walls to create uneven, strongly textured surfaces. The "Doll's House" created a sensation with Carmel residents, many of whom wanted Comstock to build them similar structures for homes and businesses. Thus Hugh Comstock found himself launched into an exiting new profession. He became a designer and builder of a new kind of fantasy architecture, totally different from the more commonplace, boxy summer cottages of board and batten that comprised the majority of the Carmel architecture.

B. 10. Significance (Continued from 1st Continuation Sheet)

Comstock set up an office adjoining his home, and for the next few years concentrated on designs for his "fairy-tale" cottages. More traditional craftsmen were inclined to balk at his unconventional methods, nevertheless, when the Tuck Box Tea Room was built in 1926, the <u>Carmel Pine Cone</u> fancifully dubbed Comstock as Carmel's "Builder of Dreams."

In the late 1920s, just before the Great Depression, he became more pragmatic, and bowed to the demands of residents, who wanted larger, more luxurious and traditional structures for year-round homes. Comstock remained true to his own principles of concern for the environment and to his love for natural native materials. His original designs for luxury homes included the use of chalk rock, natural woods and hand-hewn timbers, terra cotta tile, redwood shakes, and hand designed fixtures. An interesting innovative idea of his was the use of rough lumber which was first painted, then the paint was partially removed for a flecked look for the interior walls.

Comstock's interest in the use of local clay for adobe bricks to reduce building costs led him on a search for bricks that would not absorb water and disintegrate. He learned that stabilized, waterproofed adobe bricks had been made, but since he was unable to get any, he invented his own formula. His and his associates started their own adobe brick plant in Carmel Valley, and called their bricks "Bitudobe".

The invention of Bitudobe led to the development of a system in which heavy grooved bearing beams are placed at intervals in a single layer of modern, stabilized adobe brick walls, and locked together with waterproof mortar. Comstock then devised a special mixture to insulate and waterproof adobe roofing, and a type of adobe paint that would keep the liquid asphalt which waterproofed his adobe bricks from bleeding and discoloring the paint.

Mayotta and Hugh Comstock were both known for their generosity, kindness, and warmth. Hugh was genuinely well-liked and respected by his associates. He also gave his time freely to the community, serving more than 10 years as Chairman of the Carmel Sanitary board of directors and as President of the Carmel School Board where he also acted as a consultant to the architects who planned Carmel High School. In 1946, Comstock became a committee member of the then newly-created Carmel Planning Commission.

Hugh Comstock died unexpectedly on June 2, 1950.

The Lemos Building has had minor alterations and remains basically intact. It meets the criteria of architectural development as stated in the 1997 Carmel Historical Context Statement under Architectural and Economic Development.

CR#3 Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Garden Shop Addition (1931) qualifies under California Register Criteria #3 as a work by Hugh Comstock who established the Fairy-Tale Craftsman Tradition in Carmel-by-the-Sea in the 1920s. The adjacent Tuck Box (Sally's 1926) by Comstock and the Lemos Building, aka Garden Shop (1929) by Pedro Lemos are the prime examples of the commercial application of this style. the Garden Shop Addition is a more modest expression with a three-sided window bay and shingled roof, it ties in with the other buildings around a Carmel Stone arched gateway and walled courtyard that has had only minor changes since 1931. The entire complex has been photographed extensively and has become synonymous with Carmel-by-the-Sea throughout the world. In the early 1980s, developer Craig MacFarland utilized design elements of the three buildings in creating a new commercial row of shops at San Carlos and 6th and set off a Fairy-Tale revival that is still evident throughout the city. The collaboration of Hugh Comstock and Pedro Lemos is also significant in establishing the Arts and Crafts Tradition as a primary concept in the city's design review process.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Terra Cotta sculptural group titled "El Paseo" by artist Jo Mora is significant under California Register criterion 3 in the area

of architecture for its high artistic value and under criterion 2, as an excellent example of the artistic and cultural contributions of Jo Mora to Carmel in the 1920s.

Jo Mora (1876-1947) was born in Montevideo, Uruguay in 1876, the son of Catalan sculptor, Domingo Mora. The family moved to Massachusetts in 1882 where Jo and his brother Luis studied at the Cowell's Art School in Boston. He later studied with William Merritt Chase at the Art Students League in New York. Early in his career Mora was an illustrator for the Boston Herald. At 18 the lure of the West drew Mora to the Southwest where he lived among the Navajo and Hopi Indians, sketching their lifestyle and learning their languages. In 1903 he joined his parents in San Jose, California, later buying and working a cattle ranch near the Santa Clara Valley. With his father, Mora also worked on sculpture commissions until his father's death in 1911. In 1914 the Moras moved to San Francisco, where in 1920 Jo was commissioned by Father Mestres, of the Carmel Mission, also a Catalan, to execute his best known work, the cenotaph commemorating the life of Fra. Junipero Serrra.

Mora moved to Carmel in 1920 and commenced the work, which would take him about four years to complete. During the process Jo Mora became an artistic fixture in the community. He and his young family constructed a small home on a large parcel of land given him by Carmel developer Frank Powers. In 1922 Samuel F.B. Morse hired Mora to design a second Serra statue, in wood as the focal point for Morse's land development north of Carmel, Carmel Woods. The statue still stands, just outside the city limits at Serra Ave. and Camino del Monte. While Mora moved to Pebble Beach in 1924, his association with Carmel remained strong.

"El Paseo", Jo Mora Sculpture

Date 1/20/2002

□ Continuation | Update

B10. In 1927 he began to illustrate colorful and humorous maps, which he called cartes, of California and of Carmel. These productions became extremely popular. He began writing books as well. In 1928 Mr. L.C. Merrill, owner of the new El Paseo business block, hired Mora to do a figurative piece for the interior courtyard, which resulted inthe pair of flirtatious *Californios*. There remain three publicly accessible sculptural works by Jo Mora in the immediate Carmel area. The 1922 Serra statue at Serra Ave. and Camino del Monte, outside the city limits, the Serra cenotaph on the grounds of the Carmel Mission, a religious facility, and the El Paseo figurative piece in the downtown commercial core. Of the three, the

El Paseo statue is the most readily available to the visiting public. Mora's maps and books have become collector's items over time, as have the few small bronze sculptures he produced for the private market. It is his work in public places that continues to remain most available to the general citizenry. The best representative example of that work in the city of Carmel is in the El Paseo.

The small polychrome Terra Cotta figures of the *Californio* man and woman of the 1840s are historically correct in their dress and in their deportment. They represent an era described by writer Gertrude Atherton as "The Splendid Idle Fortys" when California was a pastoral Eden, at least for the *Californios*, or *Hijos del Pais*, that occupied its pueblos. Jo Mora's courtyard composition captures the character of those earlier times, placing the Spanish Eclectic architecture of the El Paseo building which they occupy into a California context. The sculptural group has not been altered over time. Except for the softening of its original colors, it retains its historic integrity as modeled in 1928, and remains a significant piece of public art in Carmel.

El Paseo Building is significant under California Register criterion 3, in the area of architecture as the best remaining example of Spanish Eclectic commercial design in Carmel. Designed by the Oakland architectural firm of Roger Blaine & David Olsen for businessman L. C. Merrill in 1928, the two-story, reinforced concrete building complex, with its covered passageways and open interior courtyard, is a veritable dictionary of the decorative vocabulary for the Spanish Eclectic architectural form. The overall sense of the complex is Andalusian, while the central tower is Mexican in character and is designed from nothing but plain tile. As noted Carmel writer and builder Perry Newberry stated about El Paseo in an article for the October 1928 issue of The Architect and Engineer, " There is a distinction about every detail of the building." It employs an abundance of colorful imported tiles as facing for the risers in its second story staircase, fronting two fountains, over entryways and even as the base of its wrought iron balconies. There is an equal amount of locally fabricated wrought iron work, executed from measured drawings made in Spain by the architects. All of the window grilles of this material have a different twist. The metal period lanterns that grace the passage walls were also designed by the architects. Irregular tile eaves, diamond-point brick corbelling and the scalloped edges of the balconies throw shadows on the building even during the mid-day sun. Every shop in the complex has a fireplace. The rough, red floor tile of the passageway and open courtyard were laid in such a way as to invite moss to grow in between. There are flowers in imported pots, and plots under windows, as well as the two fountains, and several mature pines fronting both Dolores and 7th. The building evokes the rough character of the Spanish style and retains an appearance of great age despite its use of modern materials, tools and workmanship in recreating a sense of the past. For high artistic value, there is little else like it in Carmel.

⊠ Continuation ☐ Update

P3. The 7th Ave. frontage has three large, arched window openings on he first floor of the two-story main building block, two of which are blind arches, i.e. infilled with small multi-paned steel casement windows high in the arches. The entry to the interior court on this elevation is also at the junction of the one and two story building components, without the lintel form, but with stuccoed corbels, capped with a set of tiles in a Moorish keyhold motif. There are two shops in the one-story wing to the east. The first is entered through a door just inside the passageway. The second, further east, through a wood paneled door facing the street. There are three balconies found on the street facing elevations of the second floor. The 7th Ave. balcony, with its wrought iron rail, is reached by one of two multi-paned wooden French doors. The second balcony is at the corner of 7th and Dolores, where the second floor steps back to allow for a parapeted open balcony, with a decorative tile rail where the building angles to meet Dolores. The angle also houses a principal shop entry on the first floor, capped with a shaped stucco door hood. The last balcony of the two story block is found in a low polygonal tower facing Dolores. This one also has a wrought iron rail, but only one French door, similar to those found along 7th Ave. The stepped and intersecting gable and hipped roof system is covered in Mission tile. A large stucco clad interior chimney with decorative cap is found at the inside of the ell on the parapeted corner balcony. Fenestration is irregular, with large arcaded show windows, smaller single and paired multi-paned steel casement type and single and paired French doors throughout. As noted by Perry Newberry, "No two doors in the building are alike. The hand-made, hand-forged wrought iron work in the window grilles all have a different twist. The one wood window grille is sand-blown, giving the appearance of great age. The grille window inside the paseo is from measured drawings made in Cordova by the architect." Rought, uneven square floor tiles form the paseo and interior courtyard. As one enters from Dolores, the open staircase turns to the south, enclosed by a high wall above a half-arched bridge form, with small openings for light along the top of this feature. A second tiled fountain, now a flower bed, is seen at the end ofthe corridor in the opencourtyard. To the north of this fountain is the free standing terra cotta sculpture El Paso by noted artist Jo Mora, of a young Californio bowing to his Senorita. The building complex is a veritable dictionary of decorative vocabulary in the Spanish Eclectic style. There have been very few and only minor changes to the exterior elevations, including the interior passage at the courtyard. This is the best example of the architectural mode in Carmel.

J. The complex was constructed for businessman L.C. Merrill by Blaine & Olsen of Oakland. Roger W. Blaine & David Olsen had been there with Willson J. Wythe of that city, and were primarily church and commercial designers. Wythe, an instructor at UC Berkeley, "ied in 1926, and the firm of Blaine & Olsen only lasted until the Depression. Both Blaine & Olsen had spent some time traveling in Spain or to the comission, so they were acutely aware of the nuances of Spanish architecture. This is one of their few known works. Owner Merrill soon sold the building to Harriet Doerr Doulton, who in turn resold it in 1931. As noted in the description, only minor door and window changes have been made over time, all in keeping with the basic character of the building. It continues to evoke a strong sense of time and place as constructed in 1928. El Paseo reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Enchanted Oaks Bldg. is significant under California Register criterion 3, in the area of architecture abecause it represents the design work of two well known Carmel builders, Samuel J. Miller (1927), and Ernest Bixler (1941). Enchanted Oaks evolved from a garage, constructed in 1920 and expanded by contractor Samuel J. Miller in 1927, into a small, but engaging Tudor Revial commercial building, designed for Mrs. C.S. Lowell. The tiny shop abuted the Spanish Eclectic style El Paseo Bldg. to the west, and acted as a bookend along 7th Ave. Miller paid great attention to detail in the exterior surface treatment of the small shop, allowing it to compete visually w/the Spanish Eclectic decorative vocabulary of its neighbor. In April. 1931 Ernest Bixler remodeled the first floor facade for Carmel writer/realtor Daisy Bostick. He added the brick wainscoat, the multi-paned fixed wood windows, and a vertical wood-plank door. In 1941 Bixler designed and constructed two, simple, square stuccoed studio apartments, stacked at the rear of the property for Ms. Bostick. These features have been considerably altered over time, and have lost integrity

Samuel J. Miller (1888-), designer/builder for the original building in 1927 was a native of Washington state, who learned the carpentry trade in San Francisco in the early twentieth century. For seven years he was foreman of the L. H. Sly Co., constructing large apartment buildings, including the Stanford Court Apts.. He came to Carmel about 1920 as foreman of construction for M.J. Murphy, superintending the building of the Blue Bird Tea Room on Ocean Ave., and many residences. About the mid-1920s he established his own practice, completing around twenty private residences by 1927, including additions to the Thomas Cator Hse. near 4th & Lopez.

□ Continuation □ Update

P3. The building abuts the sidewalk, w/a gated entry to the rear of the propertyon the west side. The two rental units to the rear, dating from 1941, are not part of this review.

B10. Ernest Bixler (1898-1978) came to California from his native Arkansas just prior to WWI. In 1918 he enlisted and served for the duration of the conflict. Returning home, he joined his father, a contractor by trade, and became a carpenter in Oakland, California. Except for a year in Los Angeles, he worked in the East Bay area before coming to the Monterey Peninsula in 1930. His design and construction skill was well received, and he continued to build houses in Carmel and Pebble Beach until 1940, when he became Carmel's Postmaster. He served in this capactiy until 1951, except for a second period of active duty during WWII. In 1951, heretumed to contracting, which he followed until his retirement in 1966. His brick wainscoat and new window treatment of the Enchanted Oaks Bldg. for Daisy Bostick in 1931 was consistent with the original 1927 Tudor style of the building, maintaining its romantic revival character. Window changes over time have reduced the historic integrity of thebuilding somewhat. However, these were made generally without significant change to thetheme of solids and voids on the building's facade. The Enchanged Oaks Bldg. continues to contribute to the creative and eclectic building design that characterized Carmel's downtown commercial development at the onset of the Great Depression. It reflects the findings of, and is consistent with, the 1997 Carmel Historic Context Statement under the themes of architectural and economic development.

CR#1

Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Doud Building qualifies under Criteria #1 as an altered Spanish Colonial Revival commercial building that was built on the site of the Historic Manzanita Club that was the main social gathering place in Carmel from 1916 to 1926. The current building dates from 1932 and was designed and constructed by M. J. Murphy who worked in many architectural styles. The original corner tower mirrors the tower across Ocean Avenue on the Carmel Dairy Building and acted as a gateway to the main downtown business district. The tower's extended balconies with French doors and wrought iron balusters are original as well as the inset Moorish tiles.

The east elevation originally featured a closed molded arcade with small curved windows at the peak of each arch. In 1970, the arches were opened up into full windows that extended around to the north elevation framing separate doors leading to first floor commercial shops and a stairway to the upstairs apartment. The upper east elevation still retains the multipane casement windows and a tiled low pitched gabled roof. The western portion of the north elevation has a first floor arched entrance and show windows and a shed tiled roof with small casement windows on the second story. A second floor recessed open porch flanks the corner tower with access by French doors to office space that was originally an apartment. The iron work may have been created by Fred Leppert or Francis Whitaker who often contracted with M. J. Murphy. Many Spanish styled details remain, however, most of the ground floor elevations have been changed through numerous commercial remodels.

- B. 10 Significance (Continued from Page 2)

The list of commercial enterprises that have been housed in this building attests to the varied economic development of Carmel-by-the-Sea from the 1930s to the present. The upstairs apartment was converted to office and studio space after World War II. Local architect Robert Jones had his office and drafting room in the Doud Building during the 1950s and 1960s.

M. J. MURPHY

Michael J. Murphy was a pioneer builder and contractor in the earliest era of Carmel, and therefore helped to shape the entire architectural character of the village. He was born in Minden, Utah in 1884 of hardworking parents of limited means. Young Murphy managed to finish high school, but then had to begin to earn a living as a house painter. In 1902, he visited Carmel and became attracted to the area. He married in 1904 and returned to Carmel to live. His son Frank was "the first white boy child" to be born in Carmel.

Murphy continued to be a house painter until after the San Francisco earthquake and fire of 1906 when a number of residents of that city came to Carmel to live in their summer homes and created a demand for housing. Although Murphy had no formal training as an architect or builder, he had learned enough about the trade while working as a house painter to be able to design and build simple structures that would suffice for those who came to live for the summer or reside temporarily until San Francisco was rebuilt. Murphy was soon in business erecting the simple board and batten structures so common in Carmel at the time.

At the same time, Franklin Devendorf of the Carmel Development Company had purchased much of the land in Carmel, and began to subdivide and sell the parcels. Devendorf knew Murphy and had taken a liking to him. Therefore, when he needed more houses for his lots to satisfy his prospective buyers, he helped Murphy set up a construction business. Because of his passion to be the best, Murphy went to great lengths to make certain that his structures were solidly built of quality materials. As his reputation in this regard blossomed, more and more people wanted a Murphy house. Murphy obliged and built houses all over the Monterey Peninsula, using his own designs and doing much of the work himself. In 1914, Murphy established his own contracting business, opened up a lumber and building supply store and hired many workers.

To assure a supply of crushed rock and gravel, Murphy erected a rock crusher in Carmel Valley. He obtained his rock from the shore of the Pacific Ocean and his gravel from the Carmel River. His team of horses and his wagons became a familiar sight in the area. People turned to him for assistance when they needed help. When the surf piled up the sand and blocked the mouth of the river causing the water to back up and flood the artichoke fields, the farmers called on Murphy who took his earth scraper and a team of horses to open up the channel. When high winds lashed the area and threatened to topple trees, Murphy came to the rescue by tying a sturdy rope around several closely grouped trees, thereby enabling the trees to reinforce each other and resist the force of the wind. He also helped to plant trees in Carmel to stabilize the soil exposed by building activity, and to prevent the soil from being washed into the sea by the heavy rains.

As Murphy's own business grew, he added more carpenters, stone masons, plumbers, electricians, plasterers and painters to his staff. He needed administrative and managerial help, so he hired J. O. Handley as his General Manager. Handley remained in this capacity until he began his own construction supply business, Handley and Handley (later becoming H&H). While most of the structures that Murphy erected were of his own design, he was also the contractor for a number of well known architects - Julia Morgan, Bernard Ralph Maybeck, and Robert Stanton among them. In designing his buildings, Murphy would talk to the customer, visit the site to get a visual image of the proposed structure on the site, and then go home and put it on paper. His designs were simplified drawings, but were complete and accurate enough so that major changes could be made. Murphy was a most active and prolific builder in the area and did as much to give Carmel its character as any other single person. Handley has stated "that Murphy built more than half the houses in Carmel."

Among his most notable structures are the Pine Inn, which he completely remodeled with his own design, the La Playa Hotel, the Carmel Highlands Inn, the Carmel Art Association, the Holiday House, the Carmel Texaco Station, the Sundial Lodge, the Farley Building, the Carmel City Hall (originally All Saints Episcopal Church), and the Dansk Building. The Harrison Memorial Library was partially designed by Bernard Ralph Maybeck and constructed by Murphy. However, there are no known plans of the library to be found. According to Murphy's daughter, Mrs. Rosalie Gladney, Bernard Maybeck who lived in San Francisco, would come down periodically from the city, view the progress, consult with Murphy, and return to the city on the afternoon train. It is generally conceded that Murphy had as much to do with the design of this building as Maybeck.

Date 2/24/2003 □ Continuation □ Update

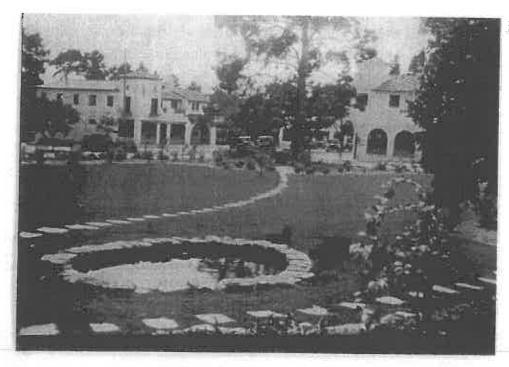

B. 10 Significance (Continued from Page 3)

Another important structure that Murphy helped to build was Tor House, the famous home of poet Robinson Jeffers. The Jefferses designed Tor House and at first hired Murphy to build it. Then in a turn-about, Jeffers worked for Murphy at \$1.00 a day learning, by working alongside Murphy, how to build his home with granite boulders from the Carmel Beach. The first section of the house was finished by Murphy in 1919. Jeffers, himself, completed the rest of the structure, including the tower and wall, over an extended period of time.

Murphy was a busy, prolific builder for a long time, but he also contributed to the general welfare of the community in other ways. He was a member of the Carmel City Council, and the Carmel Building and Loan Society. He was a charter member and director of the Manzanita Club, a social organization for the community that conducted adult athletic events as well. When moving pictures came to Carmel in 1915, Murphy was one of a committee for the Carmel Hall Association to oversee the new business, and to make sure "first class" movies were shown every Saturday. The Murphys had four children. They and other village youngsters were always welcome at the Murphy Lumberyard to gather scrap wood for projects or just to play nearby. Before a permanent school was built, classes for eighteen children were held in Murphy's lumberyard for two years (1905 and 1906), and when the first Carmel Boy Scout Troop was organized, M. J. Murphy built the clubhouse.

Murphy retired in 1941, shortly after his wife's death. He turned his business over to his son Frank, and spent most of the remaining years of his life living in a summer house in Oregon and fishing in the McKenzie River. Murphy died there in 1949. M.J. Murphy, Inc., is still an active business in Carmel Valley, where it was relocated after Murphy sold the original Carmel store. It has been operated by his two grandsons

The Doud Building clearly reflects the findings of, and is consistent with, the 1997 C.H.C.S under the themes of Historical and Economicdevelopment.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Adam Fox Building is significant under California Register Criteria #3 in the area of architectural, economic and historical development. The two-story wood frame Victorian facade commercial building was built between 1899 and 1910 on the south side of Ocean between Mission and San Carlos. It has a similar twin-like building two blocks west between Dolores and Lincoln. Both buildings appear on the 1910 Sanborn Fire Maps and are unique for their second floor Victorian bay windows which originally housed upstairs apartments.

The building facade was originally wooden with Victorian details. In the 1930s stucco and Spanish tiles were applied to bring the building into context with many other Spanish Colonial Revival Style buildings on Ocean Avenue. The earliest retail business was a paint store, to be followed by a hardware store. In the 1920s John C. Mikel, a furniture maker and partner of Henry Larouette and the "Fix-it Shop" on Dolores Street, owned the building. Both men were active in the support of the Fire Department and the incorporation of Carmel-by-the-Sea.

The Adam Fox building is consistent with the goals of the Carmel Historic Context Statement of 1997 in the areas of architectural. economic and historical development.

P3. The current principal entry, at the NE cr of the facade is a set of wood French doors, flanked by matching side-lights, and is capped by a modern fabric canopy. The building sits at the triangular intersection of Torres and Mt. View at the top of a NW sloping parcel It is surrounded by mature oaks and pines in a garden setting of planting boxes and DG pathways. A tow Carmel stone retaining wall appears at the NE corner of the property.

B10. When Hagemeyer moved his activities to the San Francisco bay area after WWII, he sold the property to Edward Poore, whe developed it as the Forest Lodge, for Carmel's tourist trade. Because of its close association with photographer Johann Hagemeyer and his circle, the property clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of developments of art and culture.

The De Haass Hse, is significant under California Register criterion 3, in the area of architecture as an unusual and eclectic expression of the Bungalow form. It is also significant as a design by Earl Percy Parkes, one of Carmel's early noted builders. The residence is one of the most eclectic in Carmel with its oriental influenced moon, or circular entryway. Designer Parkes emphasized the opening by creating a bow in the eave line above the door. When constructed the house had the unusual feature of two kitchens. All the mill work was done by the T.A. Work Co. of Monterey. The Bungalow form is part of the Craftsman tradition, an American adaptation of the English Arts & Crafts Movement. These homes were characterized by horizontality of proportions, relance on the honest use of materials, and undisguised structural elements such as exposed beams, and rafters for architectural beauty, and enjoyment of the natural setting through porches, outdoor spaces, and the clustering of windows into horizontal bands. Both the aesthetic characteristics of the Craftsman style, and its philosophic underpinings, which linked it to progressive political, social, and artistic movements in the early 20th century, made it popular with Carmel's academic, literary and artistic residents.

Earl Percy Parkes had been a building contractor in Los Angeles since 1911 before coming to Carmel in 1919. He was guite prolific in the 1920s, designing and building a number of private residences and commercial buildings. He worked in a variety of styles, and was responsible for several Southwest regional designs in the village, as well as Tudor homes. The De Haass Hse may be his most ecclectic composition, and despite the additions over time, it still conveys a strong sense of time and place, and of feeling and association with the creative expression of Carmel's residential dwelling houses of the 1920s. The original owner, Mritz De Haass was a successful Santa Monica financier. The hse clearly reflect the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

single family residence **Property Type:**

Applicable Criteria:

CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Rufus M. Kingman Hse. is significant under California Register criterion 3, in the area of architecture as a good example

of the design work of local designer-builder Fred Ruhl.

Fred Ruhl was the principal building contractor in Pebble Beach from about 1916 through the 1920s. He did several residences and commercial buildings in Carmel, generally working with an architect. This interesting Spanish Eclectic residence was designed and constructed by Ruhl, alone. Born in Illinois, Fred was the son of a carpenter, turned farmer. After a basic education Ruhl took up carpentry himself, working his way up to contractor. In 1903 he moved to California where he followed his trade in various locations, until 1916, when he settled into the emerging gated resort community of Pebble Beach. Ruhl contracted most of the larger residences at Pebble Beach, and became adept at designing Spanish Eclectic houses, which was a specific design requirement of home ownership within Pebble Beach until 1937. Ruhl went on to become one of the founders and first directors of the Monterey County Building Council in the late 1920s.

Ruhl's solution to the difficult triangular comer lot for the Kingman Hse. was to place the long axis of the building along the widest portion of the parcel, to the north, and to run an offset "T" shape w/ his main building block to take advantage of the

southern view, and to separate the service entry, off Mtn. View, from the more formal main entry, off Santa Fe.

This afforded him considerable space, given the lot size, for an enclosed garden court. With no fenestration along the east wall of the main building block, he used the exterior chimney to articulate the large planar surface and add visual interest to the wall, which, because of its size and height brought a maximum of afternoon light into the garden. The large roof overhang covering the raised open entry porch, provided a protected area from which to enjoy the open space on cooler days. It is interesting to note that the original plans, on file with the Carmel Planning Department, have the chimney on the gable end to the south.

Record	ed by:	Kent L. Seavey	Date 12/3/2002	s≂ Continuation .= Undate

P3. The addition is in keeping with the overall character of the building. Fenestration is irregular, w/ a combination of single & paired multi-paned steel casement type windows. There is a large, fixed multi-paned steel focal window in the gable end (south) of the main building block. As noted, the triangular south end of the parcel has a tall, adobe wall enclosing the main courtyard. Outside the wall are mature trees and tall shubbery, screening the house from the two intersecting streets.

B10. The change was made w/out notation, but easily understandable given the resulting benefits of Ruhl's creative design. The simple 1959 deck addition on the upper floor of the west wing does not distract from the overall quality of this otherwise unaltered 1931 romantic revival residence. The Kingman Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Resource Name or #: (Assigned by recorder) E.C. Converse Hse

Recorded by: Richard N. Janick

Date 8/10/2001

P3a. Description:

The Converse House is a two-story, wood framed residence with attached garage. Constructed in 1932, it is irregular in plan, resting on a concrete foundation. The exterior wall cladding is a wide horizontal redwood flush siding. The medium pitch side-gabled roof is covered in wood shingle and has slightly overhanging eaves, with exposed rafter tails along the east (front) and west (rear) elevations. There are two brick chimneys present. One is an eave wall type, found at the SE corner of the front elevation, cased below the eave line in the exterior wood siding. The other, an interior type, is found piercing the ridge line of the roof a little north of the central entry.

The east facing entry itself is a simple Dutch door with segmented arch. There are no windows present along the first floor of this elevation, only a patterned series of small, rectangular vents piercing the wall to the north of the doorway and glazed within to allow light into the lower rooms along that elevation. Fenestration on this elevation is limited to three 2/2 double-hung wood sash windows, found at either end of the elevation, with one just north of the eave wall chimney. There are two smaller windows on the north side elevation, one on the first and one on the second floor, forward of the attached garage. The south side elevation has 2/2 doublehung windows at both corners of the second floor, and a pair of French doors, wrapping around the SW corner of the first floor.

enestration along the west (rear) elevation includes a combination 1/1 double-hung wood sash (to the north), and ribboned French doors (toward the south) on the first floor, opening onto a brick patio and downward sloping terraced rear garden, originally designed by San Francisco landscape architect Thomas Church. The second floor along this elevation features a ribbon band of windows, combining fixed and double-hung wood

The attached one-story two-car garage, also with a side-gabled roof, has open bays separated by a simple wood post. The modern Regionalist style residence sits on a moderately sloping hillside, close to, and just below the road grade. It is masked from the roadway by mature Cypress hedges. Its imaginative use of materials and simple, but elegant plan and siting are significant forerunners of the San Francisco Bay Area regional style.

B10. Significance:

This property is eligible for listing in the CRHR under Criteria #3 as a representation of the work of William Wilson Wurster. Wurster was considered the leading figure of the Modern Bay Area Style which combined the spatial and structural theories of the Modern Style with California traditions of local materials, integration with nature, and indoor-outdoor living. The Converse House represents the synthesis of earlier California traditional vernacular designs of one and two story gabled roofed structures with vertical board and batten siding, into sheer horizontal blanks and large asymmetrical window treatments. The rear of the house steps down a stepped grade and opens into a garden area originally designed by Thomas Church. The lower level living room, dining and kitchen areas open out to the west, facing the garden through large windows and French doors. The main bedroom is located on the upper floor overlooking the garden. This mixture of new aterials and open plans became a trademark of Wurster's work within the shell of simple vernacular xteriors. This house won an honor award in 1935 from the Northern California Chapter of the A.I.A. The 1932 residence retains its integrity as constructed to a remarkable degree.

The east facing entry itself is a simple Dutch door with segmented arch. There are no windows present along the first floor of this elevation, only a patterned series of small, rectangular vents piercing the wall to the north of the doorway and glazed within to allow light into the lower rooms along that elevation. Fenestration on this elevation is limited to three 2/2 double-hung wood sash windows, found at either end of the elevation, with one just north of the eave wall chimney. There are two smaller windows on the north side elevation, one on the first and one on the second floor, forward of the attached garage. The south side elevation has 2/2 doublehung windows at both corners of the second floor, and a pair of French doors, wrapping around the SW corner of the first floor.

lenestration along the west (rear) elevation includes a combination 1/1 double-hung wood sash (to the north), and ribboned French doors (toward the south) on the first floor, opening onto a brick patio and downward sloping terraced rear garden, originally designed by San Francisco landscape architect Thomas Church. The second floor along this elevation features a ribbon band of windows, combining fixed and double-hung wood sash.

The attached one-story two-car garage, also with a side-gabled roof, has open bays separated by a simple wood post. The modern Regionalist style residence sits on a moderately sloping hillside, close to, and just below the road grade. It is masked from the roadway by mature Cypress hedges. Its imaginative use of materials and simple, but elegant plan and siting are significant forerunners of the San Francisco Bay Area regional style.

B10. Significance:

This property is eligible for listing in the CRHR under Criteria #3 as a representation of the work of William Wilson Wurster. Wurster was considered the leading figure of the Modern Bay Area Style which combined the spatial and structural theories of the Modern Style with California traditions of local materials, integration with nature, and indoor-outdoor living. The Converse House represents the synthesis of earlier California traditional vernacular designs of one and two story gabled roofed structures with vertical board and batten siding, into sheer horizontal blanks and large asymmetrical window treatments. The rear of the house steps down a stepped grade and opens into a garden area originally designed by Thomas Church. The lower level living room, dining and kitchen areas open out to the west, facing the garden through large windows and French doors. The main bedroom is located on the upper floor overlooking the garden. This mixture of new aterials and open plans became a trademark of Wurster's work within the shell of simple vernacular xteriors. This house won an honor award in 1935 from the Northern California Chapter of the A.I.A. The 1932 residence retains its integrity as constructed to a remarkable degree.

B10. Significance (Continued):

WILLIAM W. WURSTER

The architect was born in 1895 in Stockton, California. He studied architecture at the University of California, Berkeley, under John Galen Howard, and graduated in 1919. He then worked in the New York office of Delano and Aldrich, and in the San Francisco office of John Reid. He established his own practice in 1926; in 1944 Theodore C. Bernardi became a partner, and in 1945 Donn Emmons became a third partner. Wurster taught at MIT in the early 1940s and became Dean of its School of Architecture in 1944. In 1951 he returned to the West to be Dean of the School of Architecture of the University of California, Berkeley (later the College of Environmental Design). His most provocative work was accomplished during the 1930s and early 1940s. He died in 1973.

THOMAS D. CHURCH

Church was born in 1902 and graduated from the University of California, Berkeley, in 1921. In 1925, he received the degree of Master of Arts in Landscape Architecture from Harvard University. Since 1928, he has practiced in the San Francisco Bay Area and has made a major contribution to the field of modern landscape design, principally in the decades 1930–1960.

Architectural Development of Carmel

Area: Carmel-by-the-Sea

Applicable Criteria: CR#3

Period of Significance: **Property Type:** R-1 (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

This house qualifies under Criteria #3 as an intact unique house designed by Albert Henry Hill in Carmel on a steep triangular lot in the Third Bay Region Style. The steep hillside modern house was first developed by Jon Konigshofer in the 1940s to accommodate irregular terrain on the standard 40' x 100' grid of Carmel's original plan. Diagonal streets such as Mountain View create many triangular lots when intersecting the standard street grid. Henry Hill adapted to the irregular lot and steep grade utilizing a diagonal axis floor plan and irregular elevations taking advantage of continuous light exposure and natural environmental elements.

Albert Henry Hill's work exemplifies a style of architecture that developed in the 1940s and 1950s which has become known as the Bay Area Style. This style made use of natural materials and had a great concern for the surrounding environment. His style can be characterized by very simple natural surfaces, sharp and angular shapes, either very flat or very sloped roofs, and very simple floor plans. At Harvard, Hill studied under Walter Gropius and Marcel Breuer, two architects noted for bringing the modern design philosophies of Europe's Bauhaus movement to the United States. Their new ideas about the creation and use of space and about the use of local and traditional materials greatly influenced Hill's architectural expression. Hill's commissuons included national and international projects, bringing him numerous awards throughout his career. He designed and constructed a weekend cottage at 7th and Camino Real in Carmel in 1948. The three neighboring houses on Lopez Avenue became known for their imaginative and unique relationships. By 1971, Hill had converted his summerhouse to serve as his primary residence, and soon became active in the local community, including serving on the Carmel Planning Commission.

B.10 Significance (Continued from Page 2)

Hill's architectural aesthetic serves as a continuing thread in Carmel's design traditions with its focus on integration with the local setting, 'use of local and traditional materials, and experimentation with artistic expression in residential design.

ALBERT HENRY HILL 91913-1984)

Albert Henry Hill was born in 1913 in England. His family moved to Berkeley, California in 1916. Hill received a Bachelor of Arts degree in architecture from the University of California at Berkeley in 1935, and an M.A. degree in architecture in 1938 from Harvard, where he studied under Walter Gropius and Marcel Breuer. He then worked in association with John Ekin Dinwidie in San Francisco. He met his wife, Heather, near Oxford, England during World War II. He was in partnership with Eric Mendelson in San Francisco in 1947-48, and later established a private practice in Carmel and San Francisco. His final partnership in San Francisco with architect Jack Kruse ended in 1984 when Hill died of cancer.

Hill also contributed a design for "Greenwood Common" developed by William Wilson Wurster in the Berkeley hills in 1955 as single family houses built around a "common" open space with shared service areas. Other prominent architects who participated were Rudolph Schindler, Harwell Hamilton harris, Joseph Escherick and John Funk. This project celebrated the "Second Bay Area Region Style" of integrating modern architectural materials and processes with the natural environment and indoor-outdoor living. This project was a West Coast equivalent of the famous "Housing Exposition near Stuttgart, Germany organized by Mies Vander Rohe in 1929 featuring modern style housing designs by Walter Gropius, J.J. P. Oud, Peter Behrens, Le Corbusier and Mies Vander Rohe.

Property Type: single family residence

Applicable Criteria:

CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Florence Lockwood Studio/Hse. is significant under California Register criterion 3, in the area of architecture as an excellent and almost unaltered example of a design by one of Carmel's most noted master builders, Hugh Comstock, midway

in his design career.

The Lockwood Studio/Hse. design conveys all of the accepted characteristics of the San Francisco Bay Regional style of architecture. It is a residential dwelling, small in scale, very woodsy with its exterior redwood siding, strongly suggesting a visual mode that is vernacular and anti-urban. In this case, read separately, the east and west side elevations reflect respectively early California adobe, and pioneer saltbox sources. The house is beautifully sited, and respective of its "place" in the landscape. It also has its share of visual and ideological contradictions. The integration of the east side elevation's chimney into a full Carmel stone wall is a very unusual expression of the local material. The massive studio window in the north wall, treated as a wall domer both reflects earlier building traditions and looks forward to postmodernist expression. Of interest is the fact that the original drawings of the residence show vertical board-and-batten as the exterior wall cladding, and an adobe chimney. As there is no evidence in the record of building permits to the contrary, it can be assumed that the existing exterior finishes were those that were used in construction in 1940.

Hugh Comstock (1893-1950) has been recognized for his early design of the storybook cottages that continue to influence residential design in Carmel, and for his introduction of a variety of innovative construction methods & materials, especially his Acradobe block, and Post-adobe building system.

Florence Lockwood Studio/ Hse

porded by:

Kent L. Seavey

Date 4/17/2002

Continuation □ Update

P3. The house sits just below Ocean Ave. at the cr. of Forest, on a SW sloping lot, behind a high, flush-board fence along Ocean, in a well forested landscape setting of mature pines, oaks and dense shubbery.

B10. It is clear from his residential work in the mid 1930s that he was aware of, and influenced by the work of Wm. W. Wurster, who had done several homes in Carmel, including the 1932 Converse House. Many of Comstock's residences of this period reference Wurster's and other California regionalists interest in vernacular forms. The Lockwood Studio/Hse. reflects not only how much he learned, but how sophisticated "the builder of dreams" could be. The textured Carmel stone wall, and the elegant proportions of the studio north window clearly reveal Comstock's ability to always keep in mind the suitability of his structural forms to the land on which they were sited; their practicality of use, and their permanence of beauty.

A native of Santa Cruz, Florence G. Lockwood studied at the Mark Hopkins Institute of Art in San Francisco She resided in Burlingame until she came to the Monterey peninsula in 1928. She was an early and active member of the Cammel Art Association, and exhibited her work at the Golden Gate International Exposition at Treasure Island in 1940, the year the studio/hse. was constructed. She lived in the house until her death in 1963.

The Lockwood studio/hse. reflects Carmel's pronounced taste for creativity and individualism. The Bay Area style was a logical extension of the Arts and Crafts aesthetic that prevaded the community during its early years of development. The property is consistant with the findings of the 1997 Carmel Historic Context Statement under the theme of architectural development.

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Jacob W. Wright Hse. is significant under California Register criterion 3, in the area of architecture as the work of noted Carmel builder George Mark Whitcomb. it is also significant as one of four English Tudor influenced cottages found along the

SW side of Mtn. View Ave., between 8th Ave. and Santa Fe, in "The 80 Acres".

During a 1978 interview and tour w/writer David E. Metz, Carmel master-builder George Mark Whitcomb identified the Jacob W. Wright Hse. as one of his early building projects. The building is located just across 8th. Ave. from Whitcomb's own home, "Suncatcher". The Wright Hse., constructed for the owner/operator of "The Press In The Forest", is an interesting mixture of local vernacular board-and-batten architecture and applied Tudor decorative motifs. The Tudor elements, mostly in the prominent front cross-gable, include the stuccoed apex w/false half-timbering, and the large, wooden multi-paned focal window below, as well as the vertical wood-paneled Dutch entry door. The steep-pitched cross-gabled roof and board-and-batten siding typify the smaller cottages in Carmel constructed prior to the mid 1920s.

George Mark Whitcomb was a master-builder who had come to Carmel after service in the U.S. Navy in WWI. A native of Minnesota, he had learned carpentry from his father. Whitcomb was in partnership w/Miles Bain, a friend Whitcomb had known earlier in Berkeley. Bain was the job estimator, until he got a contracting license, and went on his own in the early 1930s. Whitcomb was well known in Carmel for the quality and craftsmanship of his work. Wright only lived in the house for about two years prior to building a home and printing shop on the next lot to the NW. Ms. Florence Gaylord was the second owner.

je of necorded by:	Resource Name or #: (Assigned by recorder) Kent L. Seavey	Jacob W. Wright Hse.	Continuation Update	

B10. The house was the first of four Tudor influenced cottages built along the SW side of Mtn. View from 8th to Santa Fe between 1924 and 1929. Jacob Wright's "Press in the Forest" was second in 1925, Frederick Bigland designed and built his home, just NW of the Press in 1926, and Florence Gaylord added a detached guest cottage to the original Wright Hse. in 1929. In spite of a couple of later, less creative residential designs on the street, the row of four small cottages in their forest setting evoke a strong sense of time and place and of feeling and association within "The 80 Acres" tract. The Wright Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement, under the theme of architectural development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Nelson-Krough Cottage is significant under California Register criteria 3, in the area of architecture, as an unusual Continental Tudor example of the work of Carmel master-builder Hugh White Comstock. Hugh Comstock is best known in California for his whimsical and inventive Carmel "Storybook Cottages", designed between 1924 and about 1930. The Nelson-Krough (Krouph, Kropt) Cottage is an example of the emerging popularity in the village of architectural revivalism, particularly those forms based on medieval sources in England and Northern Europe. The fashion coincided in Carmel with an increase in building of vacation homes, for both the well-to-do and middle-class summer visitors. As neither Nelson or Krough's names appear in any period business directories it is suggested that they may fall in the latter category. The cottage, with its generally rectangular plan, steeply pitched hipped roof, and abundance of false-half-timbering is visually much closer to the Continental models of the Tudor mode than the far more popular English Tudor, which as a favorite in the village.

Hugh Comstock began his design career in Carmel in 1924, when he constructed a small "Storybook" showroom for his wife, Mayotta Brown, in which to display the handmade rag dolls she designed. Appropriately named the "Doll's House", it was an immediate hit with the independent and creative Carmel crowd, and Comstock was soon receiving commissions to design equally whimsical small dwellings for a variety of customers. He worked in this "Storybook" style until 1929, when he began experimenting with the emerging California Ranch House mode. The Nelson-Krough Cottage is the closest he came to a more conventional Tudor design, albeit derived from Continental sources rather than the more popular English forms. It is probable that the final design was influenced by the clients. Probably more than any other architect or builder, Hugh Comstock defined the architectural character of Carmel with his fairy tale cottages and commercial buildings, designed between 1924 and 1929.

To a considerable degree they have set the architectural tone for the village since that time.

B9b. George Mark Whitcomb (1947)

B10. Of interest is the fact that two other noted Carmel designer-builders, Lee Gottfried, and George Mark Whitcomb, worked on this building over time. Lee Gottfried & his brother-in-law, Donald Hale, added to the Ell at the NW comer of the building in 1929. Gottfried had come to Carmel in 1920 as a contractor from Los Angeles. His early work was for Edward Kuster, founder of the Theater of the Golden Bough. He first built Kuster's stone house on Carmel Point, then developed part of the important cluster of Tudor Revival commercial buildings for Kuster, on the SE comer of Ocean and Monte Verde in the early 1920s. The Nelson-Krough addition was done in October of 1929. Gottfried was also active in village life, helping to organize the Abalone League softball teams, and the local building and loan society.

George Mark Whitcomb, another significant Carmel designer-builder did roof work on the building and an interior remodel in 1947. Whitcomb came to Carmel in 1921 from his native Minnesota as a trained builder. His first work was a studio for noted local photographer Johann Hagemeyer, which is now part of the Forest Lodge on Mountain View. A skilled "mechanic", Whitcomb was noted for the high quality of his craftsmanship. All three of the designer-builders identified with the Nelson-Krough Cottage are listed in the Carmel Historic Context Statement.

The Nelson-Krough Cottage is a here-to-fore unidentified dwelling designed by one of Carmel's most well known designer-builders, Hugh Comstock. It was executed in an unusual Continental Tudor style by Comstock in 1926. In 1929 it had a minor addition, executed by another noted Carmel building firm, Gottfried & Hale. Further repair work and an interior remodeling was completed by yet a third well respected village designer-builder, George Mark Whitcomb. The property today retains much of its historic integrity as constructed and refined by some of Carmel's finest early builders. It clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement, under the theme of architectural development.

Period of Significance:

1903-1940

Property Type: single family residence Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Bigland Hse, is significant under California Register criterion 3, in the area of architecture as the owner designed home of noted Carmel builder Frederick Bigland, it is also significant as an excellent example of the "Storybook" substyle of Tudor Revival architecture. Master-builder Frederick Bigland came to Carmel from his native England in the mid-twenties seeking

relief from asthma. He built several residences and some apartment units, and may be best known for his redesign of the Marble Ranch, in Robinson Canyon off Carmel Valley. He left the area shortly after completion of the Marble Ranch project, seeking a more suitable climate for his condition. The Bigland Hse, is especially well sited as an example of the Tudor "Storybook" substyle. Set below the roadway in a

wooded glen, surrounded by Carmel stone walls, the rambling, false half-timbered building exudes a fairytale quality. Its leaded glass windows have designed "repairs", and the scale of the entryways is reminicient of an Arthur Rackham children's book illustration. The oversize roof shakes and randomly laid up Carmel stone chimney emphasize the home-made quality of the building. A native of England, Bigland had first hand knowledge of vernacular Medieval

farmsteads and cottages. As Bigland's home, it was an excellent advertisement for the contractor's skill as a designer & craftsman. The Frederick Bigland Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement, under the theme of architectural development.

1903-1940

Property Type: single family residence

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Florence Gaylord Guest House is significant under California Register criterion 3, in the area of architecture, as one of a series of smaller, Tudor inspired residences along the SW side of Mtn. View Ave. across from the Forest Theater in Carmel. Designed between 1925 and 1929 by various local builders, the ensemble exhibits the influence of the Tudor Revival "Storybook" substyle on residential housing in the village during the 1920s. The residence is also significant as a representative example of the work of noted Carmel building firm of Whitcomb & Bain. The building was originally designed as a guest house, adjacent to Mrs. Gaylord's "Tinker Bell". The simple, board-and-batten building employed multi-paned banked windows, and a wood-plank door to initially evoke the Tudor mode. In a 1937 bedroom addition, the roof connection between the older building and the new construction, also by Whitcomb & Bain, provided an opportunity to enhance the Tudor ambiance by creating a damatic flare in the roof shape as it met the original roof-plane. There has been no recorded exterior alteration since that time. The builders, George Mark Whitcomb, and Miles Bain were master-builder and job estimator respectively. Whitcomb, a native of Minnesota had come to Carmel in 1919 after service in the Navy during WWI as a carpenter. Most of his work was residential. However, he was involved with building the kindergarten at Sunset School. When he obtained his contracting licence, he invited Miles Bain, whom he had known earlier in Berkeley, to join him in Carmel as his job estimator. They worked together into the 1930s, when Bain went on his own as a contractor. Whitcomb was well known for the high quality and cfaftsmanship of his work. Both pursued successful careers in the Carmel area into the 1950s. Bain may be best known as the contractor for Frank Lloyd Wright's Walker House on Carmel Point. The Florence Gaylord Guest Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Carmel by-the-Sea

Period of Significance:

1903-1940

single family residence Property Type:

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Jacob W. Wright House (2) is significant under California Register criteria 3, in the area of architecture as one of the few

remaining intact examples of the residential design of noted Carmel master-builder, George Mark Whitcomb.

Many of the early homes in Carmel by-the-Sea were one-story cottages, typical of turn of the century housing found elsewhere in the country. They could be sided with narrow wooden clapboard, wood shingle or redwood board-and-batten. Fenestration tended to be either wood casement or slider type, evolving from diamond pattern Colonial Revival glazing to Craftsman style windows over time. Residential windows were generally multi-paned, with true-divided lights. Brick, stone, and Carmel stone were typically employed for chimneys, while Carmel stone seemed to be the local material of choice for walkways, patios and garden walls. A taste for simplicity of form and the use of natural materials transcends the divisions of time and architectural fashion in the village. This 1931 residence is a house that could have been as easily constructed in 1910 or 1920.

Whitcomb came to Carmel after military service in WWI, and soon established a partnership with an earlier Berkeley friend, Miles Bain. They designed and built as a partners up to the early 1930s, then separately. Whitcomb was known for the quality

and craftsmanship of his work. Both Whitcomb and Bain worked on the Wright house at varying times.

Jacob W. Wright was a newspaperman and editor who retired to Carmel in 1924. Mr. Wright founded and operated "The Press in the Forest", a private publishing enterprise on 8th Ave. he shared with his writer wife, Catherine Shockley. The little house on Santa Fe was either a later home for the couple, or a rental property. It remains in its natural, unpainted state, evoking a strong sense of time and place, and of feeling and association with old Carmel. It clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development

Area: Carmel by-the-Sea

Period of Significance:

1903-1940

designer/Percy Parkes

Property Type:

single family residence

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Jacob Kreps Hse. is significant under California Register criterion 3, in the area of architecture, as an unaltered example of a Craftsman bungalow designed and constructed by noted Carmel designer/builder Earl Percy Parkes. It is a good representative example of the type of vacation housing constructed in Carmel during the 1920s. Craftsman homes were characterized by horizontality of proportions, seen in the spreading lines of low-pitched, overhanging roofs and informal building plans; reliance on the honest use of materials, generally of local origin, like the Carmel stone used in the chimney and redwood shingles; with undisguised structural elements like exposed interior beams, bracing and rafters for architectural beauty; and the enjoyment of the natural setting through the use of porches, outdoor spaces and the clustering of windows into horizontal bands. The Kreps Hse, employs a hipped roof, popular in California, but representing only about ten percent of the Craftsman bungalows nationwide.

Earl Percy Parkes was born in Port Clinton, Ohio in 1884 where he was educated and began his business life as a traveling excursion agent for the Rock Island Railroad Company. His travels led him to California, where he took up residency in Los Angeles and entered UCLA seeking a degree in law. Parkes left college to join the building trade however, and in 1911 established himself as a contractor. In 1919 he moved to Carmel and continued his practice, building a number of homes and commercial properties in a wide variety of architectural styles. His smaller homes, like the Kreps Hse, personify the rustic and iconoclastic character of Carmel during the 1920s. Based on available Carmel building records the only change to the property occurred in 1935, when another well known builder, Ernest Bixler added a detached one-car garage behind the residence. That building is still in place, and also unaltered. The Kreps Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Architectural Development

Area:

Carmel by-the-Sea

Period of Significance:

1903-1940

Property Type:

single family residence

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Elizabeth H. Sullivan Hse. is significant under California Register criterion 3, in the area of architecture as a good representative example of Craftsman design by noted Carmel designer-builder Earl Percy Parkes. The Craftsman style was an expression of the Craftsman movement, the American adaptation of the English Arts & Crafts movement which had crystalized around William Morris in the second half of the 19th century. Craftsman homes were characterized by horizontality of proportions, seen in the spreading lines of low-pitched, overhanging gable roofs and informal building plans; reliance on the honest use of materials such as wood, brick and stone and undisguised architectural elements such as exposed beams, braces and rafters for architectural beauty; and enjoyment of the natural setting through porches, outdoor spaces, and the clustering of windows in horizontal bands. Both the aesthetic characteristics of the Craftman style and its philosophic underpinnings, which linked it to progressive political, social and artistic movements in the early 20th century, made it popular w/Carmel's academic, literary & artistic residents. The building mode was appropriate to, and idealy suited to a village in the forest.

Earl Percy Parkes (1884-1955), was a native of Ohio who worked for the Rock Island Railroad Co. until he relocated to Los Angeles to study law at UCLA in 1911. He gave up his schooling to became a building contractor, working in the L.A. area, until moving to Carmel in 1919. He was one of the most active builders in the 1920s, doing both residential and commercial work, in a variety of period styles. Much of his residential work has been altered or replaced over time. The Sullivan Hse. has also been slightly altered, w/the addition of glazing in the east facing gable apex. The work, done in 1973, is sympathetic to the general character of the building, and is reversible. There are few remaining examples of Parkes residential design. The Sullivan Hse. is one of them. It reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

The Unit House is significant under California Register Criterion 3, in the area of architecture as an experiment in affordable

cooperative house design, by noted Carmel master-builder and design innovator, Hugh W. Comstock.

Beginning in the 1920s affordable small house design was a principal goal in American architecture. Professional and popular journals from Architectural Record to Life Magazine held periodic competitions nationwide for such affordable housing well into the 1950s. From as early as 1908 houses could be purchased by mail from Sears-Roebuck and other outlets. As early as 1933 Wallace Neff was working on modular housing in Los Angeles, and Frank Lloyd Wright on his Usonian Houses in the Midwest. From the available literature it appears that Hugh Comstock was trying to accomplish at least two goals with his Unit House concept in Carmel. The first was to employ the most modern technology available to make the house comfortable and efficient. To this end he called upon the cooperative efforts of local and regional tradesmen and furnishing specialists to create a turn key residence that was complete throughout from curtains and tableware to lawn and garden for the prospective walk-in buyer. The newest Heatilator circulating type fireplace was a standard feature, special door latches that opened with the slightest pressure, and hardwood block flooring for durability and ease of maintenance. Comstock designed the structure of the house to allow additions without harming the existing architecture, by using standard materials from the various cooperative member firms. The Unit House was constructed on site employing the standards of the trade. However there was a special seam through the house that allowed it to be separated in half for moving from place to place as needed. The subject of this report was constructed on the site of the old Carmel horseshoe pits, at Ocean and San Carlos, in January of 1934 and opened for public inspection. It remained in that location until Aug of 1934, when it was split in half, and moved to its present location on Torres Street.

The Unit House

Date 9/7/2004

☐ Continuation ☐ Update

B10. In June of 1959 Comstock Associates expanded the Unit House with an addition to the south, whose design was closely in keeping with the original, proving that Comstock's modular concept was still valid twenty-five years after the model home was first constructed. The Minimal Traditional form is a product of the Depression. It is a compromise style that reflects the Romantic Revival forms, especially Tudor and Colonial Revival, but without their decorative detailing. Eaves and roof rakes are close. The Unit House is suggestive of early New England cottage types, with its wide, shiplap board siding multi-paned windows and central interior chimney. The copper hood and scalloped facia board of the focal bay window on the principal gable end also reflect the source. It was a highly popular domestic mode until the California Ranch House style superseded it in the 1940s. Comstock's choice of the Minimal Traditional look for his Unit House may have been based in part on its sales appeal to a generally middle-class clientele.

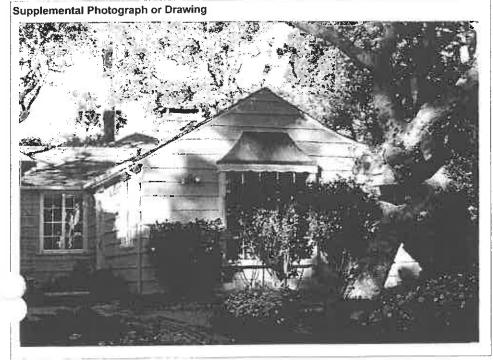

Hugh White Comstock (1893-1950), outside of M.J. Murphy is the most important early builder in the village. With no architectural training and only basic carpentry skills, Comstock designed, and constructed Carmel's first "fairy-tale" cottage in 1924 as a showroom for his doll maker wife. The whimsical storybook cottage was so well received by Carmel's creative and independent residents that Comstock soon found himself in the construction business, creating thirty or more of his individual designs between 1924 and 1930. By then he was a fully established contractor with a bent for developing new materials and methods of construction. His development of the Post Adobe framing system about 1940, saw the construction of hundreds of residences using his style throughout the Monterey peninsula and Carmel Valley

areas during the 1940s and 1950s.

Some of the cooperating tradespeople involved in the Unit House were Carmel's M.J. Murphy, who supplied the structural lumber, brick terraces and walks by James Chappell of Monterey, ornamental iron work from Carmel's Forge in the Forest, Refrigeration and ventilation equipment from Carl Rohr of Carmel, and landscaping by Joseph A. Burge, also from the village. Comstock did the mill and cabinet work, and the project was insured by his brother-in-law, George Seideneck. One of Carmel's most prominent and progressive real estate agents, Elizabeth McClung White acted as relator. Comstock, who owned the Torres Street property to which the house was moved, sold it to Ms. Elsie Ellis on January 12, 1935. It was owned by a Ms. Nina Craig at the time of the 1959 addition.

At this writing the subject property is the only known example of Comstock's Unit House remaining in Carmel. The house, with its appropriate and sympathetic 1959 addition, retains its integrity to a high degree, and continues to convey a strong sense of time and ce, and of feeling and association. It clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement

ler the theme of architectural development.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This building is a two-story Spanish Colonial Revival style mixed-use structure that was constructed in 1931. The structure consists of two store fronts on the main level and residential on the second level. The store front on the north side of the building consists of a chalk rock archway that leads to an alcove entrance. The store front on the south side of the building consists of a recessed entry and display windows that include half-turned wood spindles that break up the glass. A stone veneer exists aroung the entry door and at the base of the display windows. The second story consists of five metal casement windows. The roof is clad with clay mission tiles and the exterior is clad with cement plaster siding. Changes to the building include replacement of the double wood framed doors with metal framed doors on the south storefront, a metal ventilation grate that replaced a row of wood framed windows above the primary display window, the replacement of an art tile veneer with a stone veneer on the south storefront, and a display window addition in the alcove entrance on the north storefront.

Period of Significance:

1888-1965

Property Type: Mixed Use

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) This building qualifies as an historic resource under California Register Criterion #3 as an exellent example of the Spanish Colonial Revivial architectural style in the City of Carmel-by-the-Sea. The architectural revivals of the 1920's and 1930's left a lasting imprint on the character of the commercial district and the Spanish Colonial was the most popular of the revival styles during this period. The building's plaster siding, low-pitched Mission tile roof, metal casement windows, arched entry way and decorative tiles are all representative of this style of architecture. Noted architects and builders such as M.J. Murphy, Guy Koepp, Percy Parkes and C.J. Ryland were also building Spanish Colonial Revival style commercial buildings during this time.

A.W. Story was a recognized regional architect. His work includes the 1932 Veterans Memorial Building in the City of Watsonville and numerous commercial buildings in Santa Cruz County, many of which were constructed in the Spanish Colonial style. This building is an excellent example of his work and of commercial storefront architecture of the period. The building clearly relates to, and is consistent with, the Architectural Development Theme of the City's Historic Context Statement. The Carmel Historic Resources Board determined that this building should be placed on the City's Inventory of Historic Resources on 20 July 2009.

3 NW of 9th, w/side Lincoln (Blk 94 Lot 13)

Parcel No. 010-193-005

P3. Description (Describe resource and its major elements. Include design, materials, condition, atterations, size, setting, and boundaries)

A one-and-one-half story wood-framed English Arts & Crafts style residence, irregular in plan, resting on a concrete foundation. The exterior wall cladding is textured cement stucco. There is a one-story, front-facing (east) wing on the NE corner of the building. At the rear, there is a full height room below the ground floor grade, as the parcel slopes steeply to the west. A small one-story addition appears at the SW corner of this elevation, constructured in 2003. It is similar in design and materials to the main building blook. The steep-pitched, hipped-roofs are slightly flared at the eaves, and covered in wood shingle. The slightly overhanging eaves have closed soffits. Just below the roof-wall junction there is a narrow plaster belt course, in the form of three speed lines, that wraps around the building envelope, meeting in the side walls of a large, squrare projecting bay at the upper floor level on the rear elevation. A tall, Carmel stone exterior eave-wall chimney is found about half-way along the south side elevation. Fenestration is irregular, with a combination of large and small multi-paned wood, and steel casement windows. Along the front (east) elevation, large multi-paned steel casement type windows wrap around the SE corners of the main building block and wing. The rear (west) elevation is characterized by the symmetrical placement of two wood casement windows flanking a five panel wood door at the basement level, while the ground and upper floors have large asymmetrically placed steel casement type.

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The DDH-by-the-Sea Hse. is significant under California Register criterion 3, in the area of architecture as an excellent example of the English Arts and Crafts style of architecture, articulated in a sophisticated individualistic design by noted

California architect C. J. Ryland

C.J. Ryland was born in San Jose, receiving his first architectural training at the Western Normal California School of Arts and Crafts. After service in WWI he stayed in Europe, continuing his architectural and engineering studies. From 1919 to 1931 he was a principal in the partnership of Swartz & Ryland, in Fresno, California then in Monterey County, where the team designed the 1930 Art Moderne Salinas National Bank. That same year Ryland designed the Spanish Eclectic Work Block, in Pacific Grove. In 1931 Ryland designed the Sunset School auditorium, in Carmel. In 1936 he designed Monterey's Few Memorial Hall and Civic Center, as he did the Civic Center for Santa Cruz in 1938.

His plan for the DDH-by-the-Sea Hse. drew directly from his knowledge of the work of England's pioneer of modern design Charles F.A. Voysey. Rooted in the Arts and Crafts vernacular of medieval English cottage architecture. Voysey's well proportioned arrangement of abstract spaces, clean surfaces and natural materials was a precursor to twentieth century modernism, and a natural fit into the highly creative and individualistic building aesthetic of Carmel. Two of Voysey's buildings from the 1890s appear to be the specific sources for Ryland's design, the W.E.F. Britten Studio in West Kensington (1891), and the E.J. Horniman hse, in Frensham (1894),

Continuation Update

P3. The central window on the ground floor was replaced by wooden French doors leading to a simple wood balcony added in the 2003 rehab. The north side elevation has a series of tall, three light steel casement type windows spread along the length of the main building block. A new slightly larger window of similar design was added east of the originals in the 2003 rehab. The principal entry is slightly recessed into the south side of the one-story north wing, where it joins the main building block. It features a wooden Dutch door, with a glazed diamond paneled window above, and cross-braced wood panel below. There is a tall, narrow diamond paneled side-light immediatly west of the door. There is a raised, Carmel stone patio in front of the main entry.

A detached one car garage, of the same date, design and materials as the residence, sits at the edge of Lincoln in the SE comer of the parcel. Its double wood plank doors decorated with two small square spoke windows. This feature is to be read as an integral part of the

building ensemble.

The residence sits back from Lincoln behind large pine and oak trees, and a grape stake fence covered in ivy, in an informal landscape

setting of low ground cover and mature trees.

As noted, in 2003 a small, one-story addition was constructed on the SW comer of the original 1935 residence as part of an historic rehabilitation project. A wooden deck was added to the rear of the house and minor window and door changes were made on the north and south side-elevations. All work was conducted in conformance with the Secretary of the Interior's Standards for the Rehabilitation of Historic Buildings, and approved by the City of Carmel-by-the-Sea. A further Standards conformance review was conducted by Preservation Architect Sheila McElroy in September, 2005 as part of a Mills Act Maintenance Plan. A copy of that plan is appended.

B10. The form, massing and materials of both buildings are clearly reflected in the residence. The employment of asymmetrical multi-paned fenestration is seen in the Britten Studio, while the inspiration for the large, projecting upper story bay of the rear (west) elevation, with its views to the south and west, appear to come from a similar feature on the Homiman Hse. Ryland's interest in modernism is reflected in his use of horizontally attenuated muntins in the industrial steel casement windows of the house, and the employment of a belt course, just below the roof-wall junction, in the form of narrow speed lines. The whole asymmetrical composition is pulled together by his careful placement of the garage, forward of the main building block, in the SE comer of the parcel. A small one-story addition at the SW corner of the residence, and new wooden deck along the rear (west) elevation, with some minor window and door changes on secondary elevations were executed in 2003 in conformance with the Secretary of the Interior's Standards for the Rehabiliation of Historic Buildings. The main building block continues to retain a high degree of physical integrity.

The residence is an excellent example of the residential design of a significant California architect, C. J. Ryland, whose work is well known Carmel. It was executed in an individualistic manner, derived from the English Arts and Crafts aesthetic, long associated with local building traditions. It's significance for listing is consistent with the 1997 Carmel Historic Context Statement, under the theme of

Architectural Development in the village.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Enoch A. Lewis Hse. is significant under California Register criterion 3, in the area of architecture as one of the few homes from the early 20th century conveying a strong sense of time and place, and of feeling and association with early Carmel.

The property has been remodeled at least twice since its construction in 1906. A 1978 remodel by Pacific Grove architect Ted Larson was sympathetic to the historic character of the building, repairing damaged material and matching the historic fabric of the residence in a small bay addition on the south side-elevation and in a slight extension of the building to the rear (east). In a less sympathetic remodel in 1994, an anodized sliding glass door was added to the ground floor at the SW cr. of the bldg. This feature is somewhat visible from the street. This is work that can be reversed. The real significance of this early vemacular residence is in its siting near the NE cr. of 9th & Monte Verde, where there is a vacant lot between the early house and the corner, retaining the same view from that intersection that has been in place since about 1906. This significant setting reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development. In spite of the minor distraction of the sliding door, the property continues to evoke a particularly strong sense of time and place, and feeling and association for early Carmel.

Applicable Criteria: CR 1

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The American Legion Hall (Manzanita Club) is significant under California Register criterion 1, in the area of history as the meeting place and social hall for the first organized mens club in Carmel, the historic home of American Legion Post 512, and the location of Carmel's USO during WWII. Candy store owner and Carmel bath house manager Thomas Burnight formed the Manzanita Club in 1905, taking the name from Las Manzanitas land grant of Honre Escolle, on which Carmel was located. Members included business men, mechanics, professional men, artists & others. Charter members included Burnight, Dr. Beck, Tom Reardon, Louis Slevin, Philip Wilson, Sr., M. J. Murphy Frank Devendorf, and Ben Turner. The informal group organized in 1916, with Fred Leidig, Walter Basham, M.J. Murphy and George Schweninger as officers. They occupied Escolle's old horse barn on the SW comer of Mission & Ocean, calling it Manzanita Hall. That year the club brought silent films to the village, and the barn became Carmel's first movie theater. The Manzanita Club was responsible for many plays, masgerade balls, outdoor athletic events and a summer camp. They Incorporated in 1925, and in 1926 constructed a new club house on the east side of Dolores between 8th & 9th, Guy O. Koepp was the architect for the new facility with M.J. Murphy its builder. As originally constructed it contained a large clubroom, dressing rooms, and a modern kitchen. For many years the Manzanita Club was a center for social activity in the village. In June of 1931 architect Koepp and Builder Murphy were called upon to add a large wing to the north side of the hall for a pool and card room. In June of 1934 the Manzanita Club hosted the first meeting of the American Legion Club of Carmel. The American Legion had been established in Paris at the end of WWI as an organization for honorably discharged wartime veterans of the American armed services, to provide a nationally unified voice for veterans rights and rehabilitation assistance. One of its major accomplishments was the enactment of the G.I. Bill of Rights. The Post was responsible for the creation of both the WWII and Vietnam War memorials in Devendorf

Date 1/28/2002

P3. The building sits well back from Dolores St. behind a low adobe retaining wall in a natural landscape setting of scattered oaks and pines, with a few low flowering plants. A serpentine brick patio fills the inside of the "U", wrapping slightly around the north wing. There is a wooden flagpole just behind the adobe retaining wall, centered on the social hall with a low wood sign in front identifying the property as American Legion Post No. 512.

B10. In April of 1935 American Legion Post 512 acquired the club house from the Manzanita Club, and have occupied the facility to the present.

By 1942 the United Service Organization (USO) was afforded use of the Manzanita Club house for the duration of WWII, operating it as a social and recreational facility for the many service men and women stationed on and around the Monterey peninsula. The USO was founded in 1941 to serve the social, welfare, spiritual, recreational, and community involvement needs of U.S. service personnel and their dependants. The voluntary civilian agency provided programs and services to enhance the quality of life and improve morale. Carmel's USO was a focal point for recreation for the enlisted men of the military posts in the area. On May 22, 1943 the Carmel USO opened its Bam Door Canteen, a highly successful regularly scheduled Saturday night entertainment. The evening began at Devendorf Park where a parade, with local dignitaries in Western dress, led about 500 servicemen down Ocean to Dolores, then on to the clubhouse. Notable Carmelite Noel Sullivan supplied a variety of farm animals and equipment to decorate the hall, where the soldiers and sailors were entertained with musical presentations from opera arias to boogie woogie, and other acts over the evening. In June of 43' the USO added an "Angel's Roost" to the festivities, where a limited number (7) of local civilians could attend the Bamdoor Canteen entertainments for an admission fee of two dozen doughnuts. By early September of that year a further addition had been made to the club house by builder M.J. Murphy, from a design by local architect Robert Jones. In October of 43' "Look Magazine" did a photo shoot of the Carmel Bamdoor Canteen. At the height of its popularity the Saturday entertainments drew as many as 800 guests. The USO continued its operations until deactivated in May of 1946, at which time the Manzanita Clubhouse came back under the control of the American Legion.

rince its construction in 1926, the Manzanita Club has been a significant and active part of Carmel's community life. First as the club se for the village's oldest organized mens group, the Manzanita Club, then in 1935 it became the home of Carmel veteran's rerican Legion Post. During WWII the club house, as Carmel's USO was the core of the social and recreational life for active duty vice men and women enroute to, or returning from duty in the combat zones. It continues today as the headquarters and social reter for American Legion Post 512. Each organization that has used the facility has contributed significantly to the community in their in way during times of war and peace. The various exterior changes the building has experienced over time exhibit the response of its organizational occupants to the needs of the times. Two additions to the structure, in 1926 and 1943, are in themselves part of its historic identity. American Legion Post 512 clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of government, civic & social instututions.

RE SUNSET CENTER

SAN CARLOS STREET, BETWEEN 8th AND 10th STS. CARMEL BY THE SEA, MONTEREY COUNTY CALIFORNIA

The property listed above was placed on the National Register January 9, 1998. On that date the property was also placed on the California Register of Historical Resources pursuant to Section 5024.1 of the Public Resources Code.

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages.

There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register. However, a project that may cause substantial adverse changes in the significance of a registered property may require compliance with local ordinances or the California Environmental Quality Act. In addition, registered properties damaged due to a natural disaster may be subject to the provisions of Section 5028 of the Public Resources Code regarding demolition or significant alterations, if imminent threat to life safety does not exist.

If you have questions or require further information, please contact the National Register Unit at (916) 653-6624.

Sincerely,

Cherilyn Widell

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) This house qualifies under Criteria No. 3 as the earliest known example of a house designed by notable Carmel architect

William Cranston before his partnership with Thomas Elston in 1948. The house is a typical mixture of the American International Style and the Bay Area Tradition as defined by Lewis Mumford in 1949 in the Catalogue of An Exhibition of the Bay Area in San Francisco. The Bay Area Tradition features open plans, integration with gardens and a synthesis of exterior and interior spaces by utilizing modern materials such as plywood, sliding glass doors and pre-fabricated building techniques.

William Cranston received his architectural degree from Princeton University in 1943. He worked in Carmel in the late 40's and eventually formed a partnership with Thomas Elston in 1948. The firm of Elston and Cranston won many awards in Modern School and Commercial Architectural Design. The Magee house is intact as constructed with a slight modification to the original carport.

P3. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

A one-and-one-half story, wood-framed rustic vernacular residence, irregular in plan, resting on a post and beam foundation. The exterior wall cladding is vertical board-and- batten. The medium-pitch cross-gabled roof overhangs the eaves, and has a simple facia. There is a Carmel stone exterior eave wall chimney, found toward the NW cr. of the north side-elevation. The roof is covered in a composition shingle. The west facing facade is characterized by a slightly projecting bay on the SW cr. of the building, supporting a partial-width extention of the western roof plane, that overhangs the principal entry as a door-hood, centered on this elevation. The entry door is slightly raised on a Carmel stone stoop that is reached by a low set of open steps of the same material. The door itself is wood planked w/a wrought iron knocker. A large, fixed multi-paned wood focal window is located just north of the entry. There is a smaller, multi-paned wood sliding window to the south of the door on the west elevation of the projecting bay. In plan there appears to be another slightly projecting bay midway along the north side-elevation. This could not be observed. Fenestration is otherwise irregular, w/a combination of single and paired & banked multi-paned wood slider and casement type windows. There is a small ell shaped guest hise, to the NE of the main hise, of similar design and materials, constructed in 1927. A board-and-batten one-car

Area: Carmel by-the-Sea

> Applicable Criteria: CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The L. D. Whiffen Hse. is significant under California Register criterion 3, in the area of architecture & planning as an example

of vernacular residential housing in Carmel whose unaltered exterior and immediate landscape setting appear to be little changed from its 1926 period of construction. Visually the property seems locked in time, affording the contemporary viewer a

window to the past in terms of Carmel's residential character during the 1920s.

The Monterey contractor, A.R. Kinsman, who built this interesting vernacular residence is not listed in contemporary local business directories, nor is the original owner, L.D. Whiffen. The property tends to incorporate many of the traditional building features typically found in Carmel residences a decade earlier than its 1926 date of construction, particularly its unpainted board-and-batten exterior finish, and the use of Carmel stone for its chimney and approach walkways. Its use of multi-paned wood casement and wood sliding windows is not unusual, including a large focal window to capture the ocean view from the west. What is unusual for such a house is its obvious avoidance of the generally accepted Arts & Crafts aesthetic detailing associated with such a design. The only concession to the more popular style being the planked wood entry door and its fittings. This vernacular character of the house is much closer to the farm architecture of the Central Valley than to Charles Keeler's "Simple Home" from the Berkeley Hills. However, the residence is well suited to its village setting. A dirt trail leads up from Junipero and crosses the front (west) of the parcel, leading to 9th Ave. through wild grasses and natural ground cover. Even off the end of 9th Ave. its strong sense of time and place evokes a the feeling and association of a much earlier time in Carmel. The garage is a contributor to the overall ambiance of the place. Such settings are rare, and few remain in modern Carmel. Their protection clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Coote Cottage is significant under California Register criteria 3, in the area of architecture as an example of the lesser work of noted Carmel master-builder Hugh Comstock, and as a late example of vernacular residential building design in Carmel. Many of the earliest homes built in Carmel by-the-Sea were one-story cottages typical of turn of the 20th century housing elsewhere in the country. A hipped roof and box-like proportions were hallmarks of the genre. They were sided with medium width clapboard, wood shingles, or vertical redwood board-and-batten. Typical features included bay windows with fixed sash. Details on these cottages related them to the Victorian era Queen Anne or Colonial Revival styles or to the Craftsman building tradition. These forms reflected a taste for simplicity that transcended the divisions of time and architectural fashion. The Coote Cottage is a little altered expression of this continuing vernacular tradition in Carmel.

Hugh White Comstock (1893-1950), outside of M.J. Murphy is the most important early builder in the village. With no architectural training and only basic carpentry skills, Comstock designed, and constructed Carmel's first "fairy-tale" cottage in 1924, as a showroom for his doll maker wife. The whimsical storybook cottage was so well received by Carmel's creative and independent residents that Comstock soon found himself in the construction business, creating thirty or so of his individual designs between 1924 and 1930. By then he was a fully established contractor with a bent for developing new materials and methods of construction. His later residences moved in the direction of the California Ranch House style, employing Post-Adobe building techniques that he developed in the late 1930s. The Coote Cottage is clearly an homage by Comstock to the traditional building forms found in Carmel, and as such is of great interest for comparison with its predecessors.

Maj. Ralph A. Coote, a titled Englishman, was an artist, and a patron of the Carmel Art Association who had a building compound next door (south) to the cottage, also designed by Comstock.

1903-1940 Property Type: single family residence Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Ralph A. Coote Hse. is significant under California Register criteria 3, in the area of architecture as a basically unaltered example of a residential design derived from an existing Arts & Crafts prototype in England, interpreted in Carmel by master-builder Hugh Comstock. Col. Ralph A. Coote, the owner/designer of the complex was an artist member and patron of the Carmel Art Association, and a titled Englishman, who wished to replicate, on a small scale, his family manor house in Great Britain. The residence and its dependencies reflect the Arts & Crafts revival of medieval great houses, done by such noted architects as C. F. A. Voysey, Philip Webb and Edwin Lutyens. Hugh Comstock's skill as a builder is exhibited in the complex roofing system of the main hise., and in his use of flush wood siding on the guest house to suggest a visual hiarchy among the buildings. Hugh White Comstock (1893-1950), outside of M.J. Murphy is the most important early builder in the village. With no architectural training and only basic carpentry skills, Comstock designed, and constructed Carmel's first "fairy-tale" cottage in 1924, as a showroom for his doll maker wife. The whimsical storybook cottage was so well received by Carmel's creative and independent residents that Comstock soon found himself in the construction business, creating thirty or more of his individual designs between 1924 & 1930. By then he was a fully established contractor with a bent for developing new materials and methods of construction. To a considerable degree, Comstock's storybook cottages have set the architectural tone for residential building in the village since their construction. The Coote complex successfully combines its Arts & Crafts prototype with Comstock's playful and imaginative treatment to make them an integral part of Carmel's rsidential housing tradition. As there are no recorded changes in the building files, it appears that the Coote Hse. and its dependencies are basically intact as constructed between 1934 -1936. The Coote Hse, complex clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of architectural development.

**Property Type:** Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Paul Flanders Mansion, "Outlands", is significant under National Register Eligibility Criterion 3, as the work of a prominent architect employing an innovative method of construction. "Outlands", if not the first, was one of the earliest architect designed residences in Carmel-by-the-Sea and currently the only known example of Henry H. Gutterson's work in the region. The architect used a unique cavity wall system from locally developed and fabricated hollow concrete structural units called Thermotite as his principal building material. Bonded by grout and bound by special metal ties for structural and seismic stability, the building material professed to be "waterproof, fireproof and practically everlasting". "Outlands" English Cottage design was one of the first applications of this pictorial style of residential architecture in Carmel by-the-Sea. Variations on this mode, beginning in the town's commercial core in 1923, and expanding to the residential housing stock by 1924, established the still held popular image of the community as a quaint seaside village of creative artists. "Outlands" retains to a remarkable degree both its context ond integrity as originally constructed in 1924-25. Its planned views of the Mission and Carmel Bay remain intact as conceived by architect Gutterson. The Paul Flanders Mansion clearly reflects the findings of , and is

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Vivian Homes II House is significant Under California Register criterion 3, in the area of architecture as a representation of the work of noted architect Henry Hill. Hill was a prominent California architect whose work contributed to the emergence of the Bay Area Style. This style combined the spatial theories of modernism with northern California ideas of integration into the local setting, use of traditional and local building materials, and experimentation with artistic expression in residential design. Hill was born in England in 1913, but moved to Berkeley, California in 1916. He was educated at U.C. Berkeley, where he took a B.A. in architecture in 1935, followed by an M.A. from Harvard in 1938. At Harvard, Hill worked under the European modernists Walter Gropius and Marcel Breuer, two architects noted for bringing the modern design philosophies of Europe's Bauhaus movement to the United States. Returning to San Francisco, he went into practice with John Ekin Dinwiddie. After European service in WWII, Hill returned to San Francisco where he and Dinwiddie convinced the acclaimed modernist Erich Mendelsohn to take up practice in 1947-48. Hill built his first Carmel home in 1948, which was illustrated in the first major exhibit of the San Francisco Bay Region Style at the San Francisco Museum of Art in 1949. Hill's commissions included national and international projects, bringing him numerous awards throughout his career. In the 1960s Hill began spending more and more time in Carmel. His design of the three "weekend houses" on Palou became well known for their imaginative and unique interrelationships. In 1971 Hill moved to Carmel, and soon became active in the local community, where he served on the Carmel Planning Commission. He continued his practice as an architect here and in San Francisco, in partnership with Jack Kruse, until Hill died in 1984.

□ Continuation □ Update

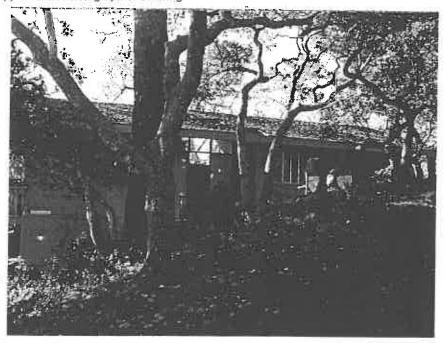

P3. The central window is opaque, and originally was flanked by louvered windows. Now the window to the south has been changed to an aluminum slider. There is an open deck at the east end of the house, above a full garage below grade. The deck was extended slightly in 1986. The residence is sited on a street corner with a steeply eastward sloping lot. The house sits along the south side of the lot, well back from both street fronts, in a natural landscape setting of mature pines and oaks. It is located in a wooded residential neighborhood of one and two-story houses of varying ages and size.

B10. Henry Hill's Vivian Homes II building is a slight departure from the architect's usual highly geometric plans, although his imaginative use of the "H" form to separate internal functions is consistent with his practice. The property is well integrated into the landscape setting and, although the materials employed are economic off-the-shelf modular items, except for the wood shake roof, their reference to Carmel's earlier Arts & Crafts design tradition is clear. Minor window changes that have taken place over time, while not sympathetic to the overall design character of the house, appear to have been placed in the existing window openings, which continue to maintain the original rhythm of solids and voids along the building envelope. A chimney, shown on the original plans, was not included on the finished residence.

There are two known Vivian Homes designs by Hill. Vivian Homes I is located on a triangular lot at the NE cr. of Mtn. View and Santa Fe. What they have in common are; difficult parcels for construction, a triangle, and a lot with two steep slopes; and building fabric that is basically modular off-the-shelf material. These two properties may represent speculative housing on the part of Hill and his then partner (1963), Jack Kruse. In context with Hill's high-style efforts in the three "weekend houses" on Palou, and a single residence on N. San Antonio, the Vivian Homes residences complete a picture of the work of this significant California architect.

Although the Vivian Homes II residence is under fifty years of age, it is exceptionally important in understanding the range of the work of Henry Hill, whose synthesis of the Bauhaus modernist philosophy of the creation and use of space, with the northern California aesthetic tradition of designing for and within the environment, has created a significant collection of some of the architect's best work in a single, small community. In spite of the minor window changes noted, the Vivian Homes II property retains a high degree of integrity as constructed in 1963. It continues the theme of architectural development, established in the 1997 Carmel Historic Context Statement, in that it contributes to the understanding of the overall design character of the community.

B10. Significance: Theme:

Arch. Devel., Gov., Civic & Soc. Inst.

Area: Carmel by-the-Sea

Period of Significance: 1903-1940 educational bldg. Property Type: Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

Sunset School primary classroom # 18 is significant under California Register criterion 1 in the area of history, and criterion 3, in the area of architecture as one of two unaltered examples of period (1929) educational design associated w/Carmel's National Register listed Sunset Center. Classroom #18, along w/rooms #16 & 17 should be added to the National Register

listing as contributing features of the complex.

The primary classrooms were constructed at the extreme southern end of the Sunset School property (Bik 110) in Carmel in 1929 because of an increase in the student population of a growing community. An initial school bond issue for expansion of Sunset School of \$75,000 was defeated by 34 votes in April of 1929, but an active Parent-Teachers Association was able to get the measure passed at a reduced figure of \$35,000 in May of that year. The needed two-thirds majority vote was 172 to 46. The primary classrooms were budgeted at \$12,000. The Carmel Pine Cone noted that "At the south end of the grounds. separated from the older children, will be two primary rooms...The so called "cottage type" will be used...more homey and attractive." The newspaper went on to comment, "We are getting away from the old, stereotyped school room with its screwed down desks and benches which turns out, as someone has said, 'screwed down minds.' Little by little we are replacing the old equipment with brightly painted tables and chairs. It gives a cheerful tone to the surroundings, and together with curtains. pictures and plants, provides an inviting atmosphere. Such childhood surroundings will influence future Americam citizens to beautify their cities, and will tend to stimulate the art life of the nation." An architectual rendering of the new classrooms appeared on the front page of the Pine Cone in its December 27, 1929 issue. Classroom #18 was the smaller of the two units. w/one large, open room w/ expansive windows facing west & east to bring in plenty of light. Space and light characterize the rather boxy, straight forward approach to the building. A major concession to the youthful imaginations of its inabitants was the inclusion of a "storybook" style chimney.

□ Continuation □ Update

kecorded by: Kent L. Seavey

B10. Located on the rear (north) elevation, the exterior eave wall Carmel stone and stucco chimney appears to be of great age. It has subtle curves and angles, and a built in narrow, roundheaded window on the west side, above a small exterior door, opening onto the wood box. The idea of such a feature as part of the classroom environment is typical of Carmel, where even the most modest cottage of the period had a fireplace. M.J. Murphy's usual craftsmanship is the character defining feature of the classroom unit, with its attention to detail in such features as the entry bracketing, and great mullioned window openings and casement type wood windows. For all its simplicity of material use, the classroom is as visually stimulating today as it must have been for the young Carmel children who were treated to a progressive education commensurate with the independent and creative character of their artistic community. The intent and design of Sunset School classroom #18 reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the themes of architectural development and government, civic & social institutions.

Michael J. Murphy (1885-1949) first came to Carmel in 1902, as a painter, with little experience as a carpenter. Two years later Frank Devendorf hired him to be the builder for the Carmel Development Company. Murphy went on to become the most prolific designer-builder in Carmel's history, with as many as 350 structures to his credit. In 1914 Murphy established his own contracting firm, and in 1924 opened M.J. Murphy, Inc., which sold building supplies, did rock crushing and concrete work and operated a lumber mill and cabinet shop, located between San Carlos & Mission Sts. Murphy was the most active designer-builder in the area between 1902 and 1940, and did as much to give Carmel its basic architectural by

and 1940, and did as much to give Carmel its basic architectural character than any other single person.

Property Type: educational bldg. Carmel by-the-Sea

Applicable Criteria: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) Sunset School primary classrooms #16 & 17 are significant under California Register criteria 1, in the area of history, and 3, in the area of architecture as one of two unaltered examples of period (1929) educational design associated w/Carmel's National Register listed Sunset Center. Classrooms #16 & 17 along w/classroom #18 should be added to the National Register listing as

contributing features of the complex.

The primary classrooms were constructed at the extreme southern end of the Sunset School property (Blk 110) in 1929 because of an increase in the student population of a growing community. An initial school bond issue for the expansion of Sunset School of \$75,000 was defeated by 34 votes in April of 1929, but an active Parent-Teachers Association was able to get the measure passed at a reduced figure of \$35,000 in May of that year. The Carmel Pine Cone noted that, "At the south end of the grounds, separated from the older children, will be two primary rooms...the so called "cottage type" will be used...more homey and attractive." The newspaper went on to comment, "We are getting away from the old, stereotyped school room with its screwed down desks and benches which turns out, as someone has said, 'screwed down minds.' Little by little we are replacing the equipment with brightly painted tables and chairs. It gives a cheerful tone to the surroundings, and togather with curtains, pictures and plants, provides an inviting atmosphere. Such childhood surroundings will influence future American citizens to beautify their cities, and will tend to stimulate the art life of the nation." An architectural rendering of the new classrooms appeared on the front page of the Pine Cone in its December 27, 1929 issue. The classrooms were located at the SE cr. of the school property, where there was a steep fall off to the cr. of Mission and 10th. requiring a two-story section for the building, w/ classroom #16 at street level, facing Mission, and classroom #17 on the bench above, fronting on 10th Avenue. In living memory classroom #16 has been referred to as the crafts room or pottery shop, appearing under these names on available drawings and plans.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The C.H. Gordinier Hse. is significant under California Register criterion 3, in the area of architecture as a little altered example of one of the earliest residential dwelling house types (hipped cottage) found in Carmel by-the-Sea. It is also significant as an example of the early work of designer/master-builder M. J. Murphy. Gordinier purchased Lot 12 Blk 111 from the Carmel Development Co. on Aug. 6, 1905 and the house was constructed thereafter. The vernacular hipped cottage form is sometimes referred to as a neoclassic rowhouse, in urban settings. Generally designed for long, narrow neighborhood lots. designers were forced to capitalize on the front and rear elevations of the house to access natural light. Bays are flattened and elongated, and almost always within the eave lines of roof overhangs. This example clearly draws from the emerging Craftsman style with its use of natural materials expressing the structure of the building, including the decorative corbeling of the brick chimney. The flared roof, modified diamond-shaped upper window lights and treatment of the bays is reminiscent of the house designed and constructed by M.J. Murphy for his mother in 1902, and several other early Murphy designs, now only known from historic photos. M.J. Murphy was hired as Frank Devendorf's builder for the Carmel Development Co., about 1904, continuing in that capacity until forming his own contracting firm in 1914. The C.H. Gordinier Hse, is little altered, and a good representative example of Carmel by-the-Sea's early residential architecture. It clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Period of Significance:

Architectural Development 1903-1940

Area: Carmel by-the-Sea single family residence

Applicable Criteria:

CR 2.

Property Type: (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The M.J. Murphy Hse. is significant under California Register criterion 2, for the contributions of Michael J. Murphy, whose building designs between 1902 and the early 1920s established much of the architectural character of Carmel, and whose generosity and public service to the community during his period of occupancy made him a leading figure in the community. It is significant under criterion 3, in the area of architecture as an excellent example of Murphy's early Craftsman designs, as well as an expression of the quality of his craftsmanship as a builder. As early as 1905 Murphy allowed the use of part of his lumber yard as a school site school in Carmel. He was a charter member of the civic minded Manzanita Club, and a member of the Carmel Building and Loan Society. From 1920-1922 Murphy served on the City Council, and was a major force in having trees planted along the median divider on Ocean Ave. Murphy made his horse teams and Fresno scrapers avilable each winter to cut away the sand closing the mouth of the Carmel River, preventing the annual flooding of the artichoke fields south of the river. He built the Boy Scout House, and alone or in concert with noted architects constructed many of Carmel's historically significant homes and businesses, including the Pine Inn, La Playa Hotel, Las Tiendas, The Harrison Memorial Library w/Bernard R. Maybeck, All Saints Church (current City Hall) w/Albert Cauldwell of S.F., and innumerable private

The Murphy home, originally built in 1904 as a small residence for his new wife Edna, grew to 23 rooms by 1926. Considering the amount of growth over time, the large Craftsman residence is extremely cohesive in its design, with only a few suggestions of alteration. The most noticible being the infill of the original open porch with plate glass windows. The use of decorative rafter tails and bracketing along the eave lines, w/their birds-mouth detailing tie the building components together visually. The principal change, of course, has been the application of paint to the original redwood exterior, but otherwise, the home appears much as it did in 1926, at the end of its major expansion.

B10. Its proximity to the owner/builder's Tudor style office offers insight into the changing tastes in architectural style and building

materials during the time of Murphy's occupancy. This pair of buildings, like Hugh Comstock's adjacent home and studio, afford considerable insight into both master-builders professional aesthetics.

Michael J. Murphy (1885-1949) first came to Carmel in 1902. Two years later Frank Devendorf hired him to be the builder for the Carmel Development Company. Murphy went on to become the most prolific designer-builder in Carmel's history, with as many as 350 structures to his credit. In 1914 Murphy established his own contracting firm, and in 1924 he opened M.J. Murphy, Inc., which sold building supplies, did rock crushing and concrete work and operated a lumber mill and cabinet shop, located between Mission and San Carlos Sts.

Murphy was the most active designer-builder in the area between 1902 and 1940, and did as much to give Carmel its basic architectural character than any other person. The Murphy Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

Property Type: single family residence

Applicable Criteria:

CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The M.J. Murphy Office is significant under California register criterion 3, in the area of architecture, as an early and important example of traditional Tudor revival design in Carmel, and as a "model home" and office for Michael J. Murphy, Carmel's first and most prolific master-builder. M. J. Murphy built the office in the early 1920s, capitalizing on the increasing popularity of romantic pictorial residential design sweeping the country. He published a catalog about this time, called "Structures of the Period", promoting his building designs and construction abilities, employing a local writer, A. Thatcher Covely, to give the promotional piece a literary bent, w/poetry and prose in praise of quality building and quality building materials. Murphy's office bldg. is modest in size w/a dominant front gable. Its use of cement stucco for the exterior wall cladding was unusual for the early 1920s, and may have reflected the fire resistant qualities attributed to the material, given the forest setting of Carmel, as well as its more economical cost to potential buyers. Murphy often employed stucco exteriors during the 1920s. Variations on this basic design, built by Murphy, can be found throughout the City. The only changes to the building occured along the south side-elevation, where the designer added a small polygonal bay in 1929 for more work space, then increased the size of the bay in 1940 for the same reason. All work on the office was done by Murphy. Michael J. Murphy (1885-1949), first came to Carmel in 1902, as a painter, with little training as a carpenter. Two years later Frank Devendorf hired him to be the builder for the Carmel Development Company. Murphy went on the become the most prolific designer-builder in Carmel's history, with as many as 350 structures to his credit. In 1914 Murphy established his own contracting firm, and in 1924 he opened M.J. Murphy, Inc., which sold building supplies, did rock crushing and concrete work and operated a lumber mill and cabinet shop located between San carlos and Mission Sts. Murphy was the most active designer-builder in the area between 1902 and 1940, and did as much to give Carmel its basic architectural character than any other single person.

B10. The property is little changed from its period of occupation by M.J. Murphy and his staff, and would be easily recognizable to anyone who knew the place in the 1920s. The M.J. Murphy Office clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The J.W. Stough House is significant under California Register criteria 3, in the area of architecture as one of the few remaining examples of relatively unaltered residential housing from the first decade of development in the village. As noted in the 1997 Carmel Historic Context Statement, "Many of the earliest homes built in Devendorfs and Powers' Carmel by-the-Sea were one story cottages typical of turn of the century housing elsewhere in the country". The Context Statement further notes that, "A taste for simplicity, often articulated by the use of shingles or board-and-batten siding, trancends the divisions of time and architectural fashion. Other features which regularly appear regardless of architectural style include "Dutch" doors, which can be opened on the top and left closed on the bottom, and the use of local chalkrock or Carmel stone for chimneys, paving, garden walls and exteriors". In this case the side-gabled vernacular cottage, while including the typical board-and-batten siding and "Dutch" door , preceeds the introduction of Carmel stone to general use as a building material, and has a rough field stone chimney, probably constructed by Carmel's earliest master-stonemason, Ben Turner. The employment of four-light wood casement windows also preceeds the introduction of the more commonly used Craftsman style windows, with small upper lights over a single lower pane. The Stough Cottage is an effective transitional example of the movement towards the Arts & Crafts aesthetic in the village.

Carmel contractor Miles Bain's sympathetic 1937 ell addition to the NE cr. of the cottage fully respects the character defining features of the original, except for his use of a brick interior chimney, which effectively differentiates the newer addition from the earlier portion of the house. The same care was employed in the 1991-92 addition at the NW cr. of the house, which is not

apparent from the street.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Pearl Dawson Hse, is significant under California Register criterion 3, in the area of architecture as an unaltered example of a 1931 Spanish Eclectic residential design in Carmel. The Dawson Hse., w/its low-pitched red tile roof, arched door entry. wrought-iron porch railings, clean stucco-clad exterior walls and asymetrical facade, is a text book example of the popular Spanish Eclectic revival style of architecture. Designed toward the end of the style's popularity in 1931, the small residence was probably built as a vacation house, as the original owner does not appear in subsequent business directories. The example is not high style, but what one would find in many late 1920s subdivisions in California. However, it is unaltered except for two visits for termite repair. The Spanish Eclectic style appeared in Carmel about 1919, with the development of the neighboring Pebble Beach resort community. At Pebble Beach Spanish Eclectic design was a requirement for all residential construction until about 1937. Its introduction, and subsequent spillover to Carmel, and indeed the entire Monterey Peninsula, reached its zenith in the late 1920s when the style superseded the popular Tudor revial as the design of choice. No designer/builder has been identified for this example, but almost all of Carmel's leading contractors were familiar w/the form, and built their versions of it throughout the City. The Dawson Hse. is indicative of the changing architectural tastes in Carmel over time. It is an unaltered example of an important Carmel residential building type, and period of construction, that clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

The Everett G. Sheperd Hse. is significant under California Register criterion 3, in the area of architecture, as an unaltered Tudor Revival design by M. J. Murphy. This neat cottage with its planked high-pitched gables, in the English fashion, is an excellent example of the changing form of the popular Tudor Revival brought on by the Great Depression. As the national economic collapse grew, home size shrank and decorative detailing began to evaporate. The Sheperd Hse. reflects this change from Murphy's usual Tudor designs, generally based on his own business office on the east side of Monte Verde, 2 south of 9th. Gone is the sweeping front gable roof w/its tiny arched windows in the gable heads, and the usual Carmel stone fencing and retaining walls associated w/Murphy's Tudor work of the late 1920s. Although the current roof covering appears to be a replacement, there are no records on file of any changes to the house since its construction in the summer of 1931. Michael J. Murphy (1885-1949), the designer/builder of the Sheperd Hse. first came to Carmel in 1902. Two years later Frank Devendorf hired him to be the builder for the Carmel Development Company, Murphy went on to become the most prolific designer/builder in Carmel's history, w/as many as 350 structures to his credit. In 1914 Murphy established his own construction firm, and in 1924 he opened M.J. Murphy, Inc., which sold building supplies, did rock crushing and concrete work and operated a lumber mill and cabinet shop located between San Carlos and Mission Sts. Murphy was the most active designer/builder in the area between 1902 and 1940, and did as much to give Carmel its basic architectural character as any

other single person: Everett G. Sheperd was a clerk in the Carmel Grocery on Dolores. He and his partner Fred McIndoe purchased the business from the Minges family in 1937. He operated it w/his wife, Inez L. Sheperd. The Sheperd Hse. is an unaltered example of the late Tudor Revival style of architecture in Carmel, and as such reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

B10 Significance.							

The original architectural plans for the house were prepared by architect Guy Koepp. Building records indicate that Dewitt Appleton was the builder for the house. This was a common relationship during the period, where a regionally prominent architect would design a house and a local builder would execute the plans. Dewitt Appleton was one of the builders who contributed to much of the development of Carmel's architecture, including stately residences in the Carmel Highlands and numerous commissions throughout the Peninsula. Both Guy Koepp and Dewitt Appleton are mentioned as prominent contributors to Carmel's architectural heritage in the Historic Context Statement (Archives & Architecture 1996). This house is significant as a good example of the combined efforts of Koepp and Appleton. The original design, materials, workmanship, setting, location, and feeling of the house remain in tact. As a significant property with good integrity, the Dankmeyer residence is individually eligible for listing in the CRHR under the third criterion. The house is not significant under the first CRHR criteria, since no significant events are known to have occurred at this property. Although John and Agnes Tennis were notable members of the community, their residence was located on San Carlos Street, and the house on Lincoln Street was one of several rentals they owned in the village. Therefore, the house also does not meet the second CRHR criterion, since it is not directly associated with people significant in Carmel or California history.

Character-defining features of the house include: the cross gable, irregular plan resulting in a small, cottage-like feeling that the house portrays as viewed from the street; the steeply pitched rooflines; the light stucco finish contrasted with the dark window framing; the cantilevered facade on exposed beams; the large wood double garage doors; the siting of the house at the rear of the lot to take advantage of the rise in elevation and at the north edge of the lot to afford a wide side yard; varied and naturalized landscaping; the chalkrock path that winds from the street through the wood gate to the front garden and on to the patio that is configured for outdoor living; and the mature coastal oak and pine trees that add to the forested feel of this block.

### P3a. Description.

The transition from the street to the house follows a six step curvilinear flagstone walkway which passes through a double arched gated entrance, leading to the house entrance and patio which skirts the southern side of the house. Either side of the entry course is thick with vegetation, including coastal oaks. The house appears to be essentially three joined sections running east-west, terminating in an "L" or "T" shape on the upper, or eastern end. Set back deeply from the street, this one story wood frame house sits on a concrete foundation wall. The western most section has a medium to steeply pitched, gable front roof and stucco wall treatments. The first floor level facing the street projects approximately eighteen inches to the west above lower level exposed square beams. The side entry, wood plank front door is recessed, located on the south wall of the west section, to the right of a fall, tapered, common bond brick chimney. Located along the western surface of the entry niche is a small leaded glass window. The southern side of the center section of the house has a twelve-to-sixteen inch wide skylight running east-west, raised about two inches from the low sloping shed roof that runs north-south. The rear section of the house has a steeply pitched gable roof which slopes at an angle perpendicular to the front section roof. The entire roof is covered with irregular composite shingle, and has exposed eaves and rounded rafter tails. The windows are generally softly recessed, created by rounded stucco edges, and the metal multiple-pane casements and fixed arrangements with brown painted wooden sills create a distinctive visual feature. From the street along the north edge of the property is a newly resurfaced (below grade) driveway leading to an attached garage with double arched doors and a steeply pitched shed roof. The front yard is set above the driveway, with the landscaped areas separated from the driveway by a stepped concrete wall.

The house appears to be integrated into its environment with large trees and dense foliage surrounding the property. Overall, the house is in good condition. The house and property are in harmony with the design philosophies, material integrity, and visual motifs that characterize the historic district.

CR3

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

This house qualifies for the CPHR under Criteria #3 as the second example of "The Honeymoon Cottage." Designed by architects Wallace Neff and Robert Stanton in 1934-35, as the western United States' first pre-fabricated house. The name was provided by film star Mary Pickford. The other example is off Pacific Street in Pacific Grove adjacent to one of the fairways of the Pacific Grove Municipal Golf Course.

Robert Stanton was the dean of Peninsula architects whose large projects in Salinas, King City, and Monterey made his firm the area's largest and a training ground for a whole generation of local architects of the 1950s and 1960s. The cottage was featured on the front page of the Christian Science Monitor, and a model home was built for public inspection. Stanton also was Sam Morse's chief plan reviewer for homes built in Pebble Beach. His wife Virginia was a major editor of House Beautiful, and the Stantons were cultural philanthropists to the whole Monterey Peninsula area. (See attached sheets.) Only two known versions of the Honeymoon Cottage are known to exist, and both are on the Monterey Peninsula. The Norman Reynolds house clearly reflects the finding of, and is consistent with, the 1997 Carmel Historic Context Statement under the theme of architectural development.

CR3

Period of Significance:

1903-1940

Property Type: single family residence

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Community Church rectory is significant under California Register criterion 3, in the area of architecture as a basically

unaltered example of Spanish Eclectic residential design by the well known firm of Swartz & Ryland.

J. Frank Devendorf donated two lots to the Methodist Church at the NW cr. of Lincoln and 7th in 1902. In 1904-05 the first church building was constructed in a Mission Revival design, and with additions was in place until 1940. The Spanish Eclectic rectory at Lincoln and 11th, by Fred Swartz and C.J. Ryland was designed to compliment the early California character of the existing church building. Swartz & Ryland were a San Joaquin Valley firm from Fresno that had come to the Peninsula as early as 1925 to work for the Roman Catholic Diocese of Pacific Grove. They would later design and build Sunset School. C.J. Ryland would then go on to several independent residential commissions.

The rectory is a good example of the popular Spanish Eclectic form, with plain stuccoed exterior walls, artfully placed multi-paned windows, some of which are arched, low-pitched red Mission tile roof, w/some variation in the planes, suggestive of Andalucian models for the romantic mode. The only change to the building was a minor shortening of the recessed principal entry, to allow space for an extra bathroom. Visually one cannot discern this alteration, as the original post-and-lintel decorative door-frame is still in place. While not as popular as Tudor derived designs, the Spanish Eclectic did have a certain vogue in the 1920s, probably from their prevalence in the gated Pebble Beach commuity adjacent to the City . Eclecticism is one of the salient features of early Carmel's designer/builders. The rectory clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context statement under the theme of architectural development.

B10. Significance: Theme:

Architectural Development

Area: Carmel by-the-Sea

Period of Significance:

1903-1940

Property Type:

single family residence

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) Marchen Haus is significant under California Register criterion 3, in the area of architecture as an excellent example of the trend setting Tudor Storybook residential design of Carmel master-builder Hugh Comstock. The original five room house was one of Comstock's largest residential designs in his Tudor Storybook mode. Executed two years after his first "Dolls House", it exhibits all of his characteristic decorative elements, except for a bubble rock roof that has been replaced by an equally appropriate steamed wood shingle example, closly resembling thatch. The "Comstock stucco" exterior wall cladding appears to have the pine needles associated with this material, and all of the exterior false timbering, door and window casings have been carved and trimmed at the edges to give them what the press of the time noted as, the appearance of the work of gnomes, "made from rock hatchets or flint edged knives." The description of the fireplace is worth noting, as it was executed by Fred Coleman, the master-mason who supervised the rock work for Charles Greene's James Hse. in the Carmel Highlands, a few years earlier. "The chimney is neither round, square or rectangular. It is fantastic in its grotesque mis-shapen form, wide at the floor line, running in a bit in the center, and bulging out again near the high peak of the roof-ceiling. And on the outside the rocks of the chimney extend quite a way down the roof to give the idea of being massive. On the top of the chimney set two chimney pots, one higher than the other." Outside of Michael J. Murphy, Hugh White Comstock (1893-1950), was the most important early builder in Carmel. Comstock designed, and constructed the first "fairy-tale" cottage in the village in 1924. His "Doll's House" struck a chord within Carmel's artistic community. His storybook cottage style was a whimsical caricature of the popular Tudor mode, with few straight building lines, especially in his signature Carmel stone chimneys. Their wood frames were clad w/a mixture of plaster and pine needles, trowled over burlap to create an uneven, textured surface. Randomly carved pieces from door and window casings added to the rustic effect.

B10. Possibly more than any other designer/builder, Hugh Comstock defined the residential character of Carmel in the 1920s, and to a considerable degree his designs have set the architectural tone for the village to this day. The two 1964 additions to the Marchen Haus were designed in keeping with the style and character of the original building, and meet the Secretary of the Interior's Standards for the Treatment of Historic Properties. In spite of the additions, Marchen Haus is one of Comstock's best designs. It was created for Oakland attorney, Milton W. Dobezensky. The residence clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement, under the theme of architectural development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The M.J. Murphy Spec. Hse. is significant under California Register criterion 3, in the area of architecture as an unaltered example of the later work of Carmel master builder, Michael J. Murphy. The little spec. hse. is a greatly simplified version of Murphy's early Craftsman residences in the village and was probably constructed as a potential vacation hse. By 1939 Murphy was one of the most successful builders in Carmel. He not only designed and built residential and commercial buildings, but supplied most of the materials for them as well. His M.J. Murphy, Inc., established in 1924 sold building supplies, did rock crushing and concrete work and operated a lumber mill and cabinet shop. Murphy could well afford to develop his own properties, and did so. His credo had always been based on quality of materials and of craftsmanship, and although he could build in any style desired, his affinity for the use of natural materials in regional styles was well known. The mass and shape of the building envelope of the spec. hse, are close to the Minimal Traditional form of his immediate neighbor, Adrian McEntire's house, constructed in the same year, 1939. However, Murphy choose to continue with Carmel's traditional board-and-batten look. The only other concession to modernity on Murphy's part was the banked wrap-around window on the SE cr. of the small house. In this he employed the tall, multi-paned banked windows of the Craftsman era. The success of the design is in its continued unaltered existence as a vacation home.

Michael J. Murphy (1885-1949) first came to Carmel in 1902, as a house painter, with little training as a carpenter. Two years later Frank Devendorf hired him to be the builder for the Carmel Development Company. Murphy went on to become the most prolific designer-builder in Carmel's history, with as many as 350 structures to his credit. In 1924 Murphy established his own contracting firm, and in 1924, as noted above, M.J.Murphy, Inc. came into existance. He was the most active designer-builder in the area between 1902 and 1940, and did as much to give Carmel its basic architectural character than any other single person.

Applicable Criteria:

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Adrian McEntire Hse. is significant under California Register criterion 3, in the area of architecture as a representative example the changing character of residential design in Carmel at the end of the Great Depression. It is also significant as the owner/builder home of Adrian Wilkison McEntire, a contractor who had worked in the City since 1924. The economic Depression of the 1930s produced a compromise building style which reflected traditional Eclectic homes, but lacked their decorative detailing. Roof pitches tended to be low. Eaves and rake were close, rather than overhanging as in the succeeding Western Ranch House style. There is usually a single chimney present, and at least one front facing gable. These houses were built in great numbers immediately preceeding and following WWII. They commonly dominate the large tract-housing developments of the period. Except for the interesting muntin treatment of the windows, the McEntire Hse, reflects the earlier eclectic Colonial Revival form. The use of horizontal muntins for residential window treatment came in the mid-1930s from the "speed lines" of the Streamline Moderne style. They were subtle suggestions of rapid movement and were seen on everything from automobiles to toasters during the period. McEntire's decision to employ them, rather than the small, square 6/6 or 6/1 lights generally associated w/the Colonial Revival mode suggests the designer/builder was aware of the trend, and wanted to keep up-to-date, or was interested in maintaining the decidedly horizontal attenuation of his residence. It is unusual to find so many designer/owner/builder homes in a single community like Carmel, especially with a number of them still intact as constructed. Builders residences and offices tended to act as "model homes" for potential clients.

P3. The house is sited on a slight rise, and is surrounded by a low, open planked wood fence. The landscape setting is one of grassed laws w/perimeter planting beds of low shubbery and flowers.

B10. Adrian W. McEntire (1891-1959) was a native of Utah, who came to Carmel as a carpenter in about 1924. When he became an independent contractor is not clear, but he was so listed in the local Polk directory for 1939, the year he constructed his home. His name appears from time to time in the *Monterey Peninsula Herald's* builders pages in the 1930s. His "modern" house appears to be intact as constructed in 1939, and is an excellent representative example of the changing architectural character of the village just prior to WWII. The McEntire Hse. reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

The Anne Martin bungalow is significant under California Register criteria 2, for the contributions of Dr. Anne Martin, pioneer champion of woman's rights in America. Born in Empire City, Nevada in 1875, Anne Henrietta Martin received her A.B. degree from the University of Nevada in 1894. She also earned an A.B. and M.A. in history from Stanford University and the Universities of Leipzig and London. She headed the History Department of the University of Nevada from 1897-1899. From 1906 to 1910 she was active in the British suffrage campaign, and was imprisoned for suffrage demonstrations. From 1911 to 1914 Ms. Martin was president of the Nevada Equal Franchise Society, and organized the women of Nevada. From 1915 to 1918 she was active in the National Women's Party, where she served as National Chairman, and was active in the National American Women's Suffrage Association. In 1918 she became the first woman to run for a senatorial seat in the United States. She campaigned for the Senate to fill the post vacated by the death of Senator Francis G. Newlands, of Nevada. Anne Martin chose to bypass the male-dominated political parties and took her case to the people as an independent. Her platforms merged concerns for women's economic and political equality with other progressive issues. She was defeated in the 1918 election and in that of 1920, when she ran again on an independent ticket.

Anne Martin moved to Carmel with her mother in 1921, buying the Mission St. property in the Spring of 1923, and having M.J. Murphy construct her residence in the Fall. From the village she wrote extensively for American and British magazines and became an active participant in the Women's International League for Peace and Freedom (WILPF). She served as Western Regional Director of the WILPF from 1926 to 1931. She was a delegate to the organizations World Congress in Dublin in 1926, and in Prague in 1929. She resigned from the WILPF in 1936 due to a disagreement with the management. She later became

involved with the Peoples Mandate to Governments to End War.

P3. In 1986 a lot split required the removal of approximately three feet of the building envelope off the south side-elevation, to meet city setback requirements. A small addition was built at the NE cr. of the building to recapture the lost space. The work was executed by noted Carmel architect Thomas Elston. He respected the craftsmanship of the first designer, village master-builder M.J. Murphy, by maintaining the original shingle pattern and reusing the existing Craftsman style windows. If one was not aware of the alteration, it would not be recognizable as such.

B10. Martin was awarded an honorary doctoral degree from the University of Nevada in 1945. Her citation read in part: "Native daughter, distinguished alumna, student and scholar, inspiring teacher, disciple of world peace, pioneer in the triumphant struggle for women's rights, leader of woman kind..." In the aftermath of WWII Dr. Martin was appointed to be one of the three observers to the Post War World Council in San Francisco in 1945.

Dr. Anne Martin was a significant national and world figure in the international women's rights movement. Much of Martin's productive adult life was spent working from her small home, "The Cinquapins", on Mission Street in Carmel. She was one of the independent, academic, literary and creative residents that inhabited Carmel during the early years of its development. The Anne Martin House clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of arts and culture.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Henry L. Watson Hse, is significant under California Register criterion 2, for the contributions to culture and the arts by Countess Claude Kinnoull, during her residency in the post WWII era. it is also significant under criterion 3, in the area of architecture and landscape architecture as one of the last large estates (1 1/2 acres) remaining in the City of Carmel by-the-Sea from the period of the 1920s. The large, Spanish Eclectic villa is sited in the middle of a formal landscape setting of mature trees, lawns and planting beds. It was constructed for Army Major Henry Lee Watson, a well known aviator, who made the first Army flight ever over the Sierra Nevada and the first flight over the Pacific northwest. Watson was also a WWI flying ace. While in Carmel, Watson was briefly in partnership w/area contractor J.C. Anthony, and others including Jo Mora, in a residential development on the Monterey mesa, involving the construction of adobe homes for working artists. Mora's son, Jo, Jr. noted that his father was not the designer of the Watson Hse. A question that has yet to be answered. Maj. Watson was one of the leading figures in establishing an airport on the Monterey Peninsula, before he moved to Southern California in 1927, to run the Adobe Hotel in Twentynine Palms. The most noted local owner was Countess Claude Kinnoull, artist, writer, civic activist and philanthropist who bought the property in 1948. A talented portrait painter, she was an active member of the Carmel Art Association. She also wrote travel books, and related her own adventures as an agent for the British and French secret services in the days preceeding WWII. A strong supporter of animal welfare, she was active personally and financially in the SPCA, as well as supporting various other local institutions. She lived the remainder of her productive life on the estate. While somewhat altered over time, those changes that have occurred have been sympathetic to the character defining features of the original residence, and anyone who knew the estate during an earlier era would recognize it today.

windows, and French doors. The studio-house is sited at the rear of the parcel, facing Junipero St. from slightly rising ground in an extremely well maintained informal garden setting of mature oaks, low shrubbery and informal planting beds. There are Carmel stone paths meandering up to a patio of the same material fronting the studio. A flush board wooden fence, overgrown with ivy, along Junipero affords privacy. There is an end gabled wooden garage at the SE comer of the lot abutting Junipero, that was constructed in 1926. In 1931 a small wood shingled studio with storage room was added at the rear (west) of the garage and still remains.

B10. Her use of pierced flatwork on the railing of the exterior balcony, and rusticated carved balusters on an inner balcony, facing south into the studio from the upper bedroom, suggest medieval Austrian or Swiss country houses as design sources. Craftsmanship and attention to detail are the hallmarks of this very individualistic and personal design. The siting of the house and the placement of the garden create a sense of refuge from the world, even though Junipero, a main traveled artery in Carmel, is probably less than 75 feet away from the house. The property has been little altered from the period of occupancy by its artist designer, and retains a strong sense of time and place. It is one of the few residential designs by women in Carmel that still retain a high level of integrity as constructed. The Celia Seymour Studio-Hse. clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Hubbell-Bliss Hse. is significant under California Register criteria 3 as an excellent example of the residential design work of Carmel master Carpenter, George Mark Whitcomb. Whitcomb designed and constructed this little vernacular residence for Miss M.C. Hubbell and Miss Grace V. Bliss, two retired school teachers from Stockton. Mr. Whitcomb made it a practice to get to know his clients and their needs. It is probable that the "Stone House" drew some of its inspiration from earlier cottages designed by Perry Newberry. Both the use of a granite stone veneer, and modified "H " plan suggest this. Whitcomb noted in an interview, "Show me a photograph, an art drawing or a painting of what you think your new house should look like, then I will build it for you." He would spend considerable time with clients determining what they really wanted before construction begain. A self-described "mechanic", Whitcomb was meticulous in his selection of materials and workmanship. Raised in a family of contractors and carpenters in Minnesota, his structures were well fitted and tight. An unusual feature of the Hubbell-Bliss Hse. is the fact that the granite veneer is free-standing, resting on its own foundation, and not physically attached to the wood frame envelope. The steel window frames are mounted in the rock veneer. George Whitcomb came to Carmel in 1921, after service in the U.S. Navy in WWI. In the late 1920s he brought Miles Bain, a former Navy buddy into the business. Bain handled the paper work until he struck out on his own in the early 1930s. Whitcomb's ease with the eclectic tastes of his clients, paired with his consumate skill as a craftsman produced some of the most interesting residences in the village, the Hubbell-Bliss House being on of his favorites. The residence clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of architectural development.

B9a. Architect: designer/ Mrs. J.S. Cone  B10. Significance: Theme: Architectural Development  Period of Significance: 1903-1940  Property Type: Single family residence  (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)  The Bark Hse. is significant under California Register criteria 3, in the area of architecture, as an original building design woman, Mrs. J.S. Cone, constructed by one of Carmel's important early contractor/builders, La Von E. Gottfried (1896-According to her daughter, Dorothy Cone Moore, Mrs. Cone determined to buy and build in Carmel in 1922. Mrs. Cone was on a number of independent and creative women in Carmel's artistic community that designed their own residences. A subject of elevene much further research. Her basic design for the house was very practical, in that it provided almost every print own with its own exterior entrance, providing for the indoor/outdoor style of living that characterized Carmel in its early of the family quarters on the south. The massive wood plank entry door afforded ample passage for more than one personand from the raised Carmel stone front patio, for informal entertainment. This leature afforded ample afternoon light and unusual in Carmel. Far more rustic than any Craftsman bungalow, the interior is however highly sophisticated in its employme. Craftsman elements, and remind one of some of Maybeck's early small houses in Berkeley. According to Mrs. Moore, her mo was an accomplished planist, skilled craftsperson, and avid gardener. These qualities are readily apparent in the truely orig aesthetic expression of the Carmel home she designed.  The builder, La Von Gottfried was a native of Ohio who had worked in construction before coming to California to work for Pacific Telephone Co. in Los Angeles. He served as an officer in the Army Signal Corps in France during WM. He came to Car rambling beach rock edifice reflecting Kuster's memories of German castles.  311. Addit

The community

embowered with mature oak trees, and is traversed by Carmel stone walkways, in a garden of native and rare plants.

B10. Gottfried built his own home on Dolores St. in 1921, perhaps the first use of Carmel stone as an exterior wall cladding on the Monterey peninsula. He was well qualified to execute the Cone commission in 1922. A number of his homes are still in place, as is much of the Court of the Golden Bough, which he constructed for Edward Custer between 1922-1924, along the south side of Ocean Ave. near the corner of Monte Verde. An original set of the plans drawn for Mrs. Cone can be found in the Bark House. The residence remains in the original family ownership, has been well maintained and has a high degree of integrity as constructed in 1922. It continues to evoke a strong sense of time and place, and of feeling and association. The Bark Hse. was adopted as a Carmel Historic property by the Carmel City Council on Aug. 28, 1997. It clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Confext Statement under the theme of architectural development.

B9a. Architect: designer/Perry Newberry	b. Builder: Perry Newberry

Period of Significance: 1903-1940 Property Type: single family residence Applicable Criteria: CR 2,3 (Discuss Importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.)

The Perry Newberry Stone Hise, is significant under California Begister criteria 2, as an early example of a Carmel residence

The Perry Newberry Stone Hse, is significant under California Register criteria 2, as an early example of a Carmel residence designed by Perry Newberry, one of the most influential figures in Carmel's history. It is also significant under criteria 3, as an excellent example of the eclectic cottage architecture of Carmel that evolved as a product of the independent and creative character of the residents of the village over time.

Perry Newberry (1880 (?)-1938), was one of the most significant figures in the history of Carmel. He and his wife Bertha, a published poet, came to the village in 1910. A newspaperman on the staff of the San Francisco Examiner, Newberry first heard of Carmel through George Sterling and his circle of artist/writer friends who settled in the village about the time of the San Francisco earthquake. Newberry was an early president of the Forest Theater (1913-14), where he wrote, produced and acted in many of the productions. He became assistant editor of the newly established Carmel Pine Cone in 1915, and later purchased the paper and was editor until 1935. A political activist, Newberry championed the physical and cultural uniqueness of Carmel. He defined its "difference" from other places as originality. He was elected to the board of trustees in 1922, and served as mayor. Allen Griffen, publisher of the Monterey Herald called Newberry "the greatest force Carmel has ever had for the preservation of its beauty, its artistic identity, and fine community spirit." When not involved with various "causes" Newberry was busy designing and building small residential cottages around the village. Master-builder Hugh Comstock noted that "his little houses...have a distinct charm of their own." "So successful were his unusual houses, that almost as quickly as he built, ardent buyers appeared, and so he continued to build many unique and artistic houses in Carmel, living in one or the other for awhile and then moving on to build one more."

B10. The house on Dolores was constructed from field stone acquired from a quarry near the Carmelite Monestary across from Pt. Lobos. Newberry tavored masonry construction and did the work himself. His cottages tend to be U shaped, withe open part of the U facing south to catch the afternoon sun, and protect against the weather. His small residential cottages are designed to fit naturally into the landscape, and to exhibit their rustic rough hewn masonry surfaces with the same originality he champloned for the community. Perry Newberry's Stone House was designated a Carmel historic property by action of the City Council on May 5, 1997. It clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of architectural development.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Anne Winslow Hse. is significant under California Register criterion 2, for the philanthropic contributions to to cultural development of Carmel made by its original owner, Anne Winslow. Winslow lived in the Tudor house, designed by Carmel's Master builder, Michael J. Murphy, from 1925 until the death of her husband, Douglas, when she moved to San Francisco. During her long tenure in Carmel Mrs. Winslow quietly shared her considerable wealth with a variety of community groups. She gifted a Hammond Organ to the Church of the Wayfarer, and helped support the All Saints' boy choir, purchased amenities for the Carmel Fire Department's quarters, and for the Harrison Memorial library. Mrs. Winslow helped buy an ambulance for the City of Carmel, and funded the surgical department of the Monterey Peninsula Hospital. She donated considerable funds for the Carmel Red Cross building, and for the Carmel Women's Club facility. She was considered locally to be one of Carmel's greatest private benefactors.

Anne Winslow's Tudor Revival house by M. J. Murphy would also qualify under California Register criterion 3, in the area of architecture, were it not for the profusion of inappropriate skylights added in a 1998 reroofing. If and when some of the skylights are removed the building would also qualify under California Register Criterion 3, but until that time the building only qualifies for listing under California Criterion 2. The Anne Winslow Hse. reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of development of arts & culture.

P3. The house sits on a corner lot, surrounded by a variety of mature tre	Date 10/5/2002	○ Continuation □ Update

P3. The house sits on a comer lot, surrounded by a variety of mature trees, including several redwoods along San Carlos, w/pines, oaks and an Italian cypress on the 12th Ave. side. There is a low stucco wall around the perimeter w/pointed bollards, and the informal landscaping includes low shrubbery and flower beds around a grassed lawn.

B10. Whitcomb was a native of Minnesota, who had come to Carmel in 1919, after Navy service in WWI as a carpenters mate. Much of his work was residential, however, he was involved in the construction of the kindergarten at Sunset School. He worked independently and with a partner, Miles Bain, who was his job estimator in the late 1920s. Whitcomb was a popular builder because of the high quality of his craftsmanship, and willingness to address the needs of his clients. He designed and built a number of small cottages around Mtn. View and 8th Ave. that exhibit his familiarity with the "Storybook" substyle of the Tudor Revival. The Ross Bonham Hse. clearly reflects government, civic & social institutions.

H. Markham in any local Carmel directories, however, world traveler Reginald Markham, had Carmel contractor Frederick Bigland build him a Moorish residence at Casanova & 13th in 1927, That while dissimilar in its austerity of design, conveys a similar sense of place as the later Markham Hse. Perhaps the two Markham's were related. At present there is no documentation of that possibility. The H. Markham Hse. in spite of minor surface alterations, is an excellent example of the International style, and one of only two known in Carmel. It reflects the creative and eclectic nature of residential architecture in the village, and is consistant with the findings of the 1997 Carmel Historic Context Statement.

- 5. Permit #94-49 (March 15, 1004) Bathroom plumbing fixtures Contractor: Hutton Construction (\$5,000)

### B10 Significance (Continued from page 2)

When Lloyd was three months old, the family moved to Mexico where his father researched Guayule rubber. From there they went to Alabama.

The Lloyd family first visited Carmel in 1911, and like many people they decided to buy property. The family purchased a block along San Carlos Street. The father worked at the old Carnegie Institution's Coastal Lab in Carmel. Young Frank Lloyd spent his formative years ages seven to 14 - in Carmel while his father visited summers from his teaching position at McGill University in Montreal, Canada. Lloyd moved to Montreal for his high school years and was later graduated from McGill University with a bachelor of arts degree in 1929. From 1929 until 1933 he worked as a sportswriter for the daily English-language newspaper, *The Montreal Gazette*.

He married the former Marjory Twyner on June 26, 1930 in Montreal. The couple took a six-month vacation in 1933 to Carmel and instead spent a year here while Lloyd built a home on the family's San Carlos Street property. He returned to Monterey in 1934 and later decided to move to Carmel permanently in 1936. When he returned to Carmel in the throes of a depression, Lloyd became a commercial fisherman until former Carmel Pine Cone publisher Perry Newberry hired him as editor of the paper. Over the next several years, Lloyd also edited the old Carmel Cymbal, served as a sportswriter for a Santa Cruz newspaper and was city editor of the Watsonville Sun. Later, Lloyd was to write a popular nostalgic column for the Carmel Pine Cone called "Once Upon a Time."

With the outbreak of World War II, Lloyd went to work in the shipyards of Sausalito as an electrician. He then returned to Carmel and worked along Cannery Row. He built approximately 12 houses throughout Carmel after World War II. Some he designed, others were designed by architects Thomas Elston and William Cranston. Lloyd then bought his own boat and became a commercial fisherman until his retirement. With his background at sea and his interests in botany, Lloyd was a prominent Carmel environmentalist. He later earned the honorary title of Carmel's "Beach Master." Lloyd was instrumental in starting a concerned citizen's group called "Old Carmel." He also was active in the Carmel Citizens Committee. He was appointed to the Harrison Memorial Library Board of Trustees by then Mayor Gunnar Norberg in late July 1977.

Lloyd's first bid for elected office was successful and he took his seat on the city council in April of 1980. His council career was marked by a deep concern for the growth of business and building in Carmel that he felt has led to a deterioration of the village character. His concern for the residents was symbolically pointed out be recent council action to return the benches to the Ocean Avenue median strip. The one near the library was named in his honor by the council in recognition of his dedication to the citizens of Carmel.

Frank Lloyd died on October 3, 1983 at the age of 76.

Marjorie Twyner Lloyd was born in Hildenborough, near Seven Oaks in Kent, England on July 27, 1908. She moved to Canada as a young girl where she was educated in Montreal, attending the MacDonald Teachers College of McGill University. She taught elementary school in Montreal for a time until 1935 when she and her husband moved to his boyhood home in Carmel. From the start, Mrs. Lloyd was an active participant in the creative life of the village. She soon made friends with people like Jimmy Hopper, Ed Ricketts and writer John Steinbeck. In 1939 it was she who wrote the review for *Grapes of Wrath* in the *Carmel Pine Cone*. She would go on to become a reporter, then editor of the local newspaper in the 1950s and 1960s. She helped found several significant area arts (Continued on Page 4)

B 10. Significance (Continued from Page 3)

organizations, including the Monterey County Symphony Association, the Monterey Peninsula Museum of Art and Carmel Heritage.

An environmentalist and preservationist, Mrs. Lloyd was arguably the most knowledgeable individual in the region on the history of Carmel and its inhabitants. She was made "Historian Emeritus" by Carmel Heritage prior to her passing in 1992.

Marjory and Frank Lloyd shared the independent spirit, intelligence and creative abilities associated over time with so many significant figures in Carmel's history. The house that Frank built became a focal point of village life and social activity during the productive period of their lives. It retains a high degree of integrity as constructed in 1949 and is most representative of the many contributions made by the couple during their time in Carmel.

B12. Hale, Sharron, A Tribute to Yesterday, Valley Publishers: Santa Cruz, 1980 Sanborn fire insurance maps of Carmel, 1930, 1930-62

B10. The Burton Hse, is a delightfully eclectic expression of the Craftsman mode of architecture. The short arm of the "L" shaped residence reads from the street like a Carmel beach shack, but once inside the planked wooden gate leading to the interior of the parcel, a long terraced garden comes into view, with the stepped north wing of the house assuring the privacy of the open space. The roof forms, with their wide, overhanging eaves and exposed rafter-tails, are reminicient of Japanese country inns, and before the hipped-roof guest unit was connected to the north wing, it must have had the appearance of a Japanese tea house. The naturally weathered wood of the long exterior shingles is a perfect compliment to the informal garden setting, and forest beyond. The 1986 solarium that was added is composed of clear sheets of plate glass, separated by simple, redwood posts, affording a transparency that does not significantly alter the appearance of the ensemble. The "Casa della Commedia" is a fine example of Carmel's early individual and creative architectural expression, it clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement, as an already identified Carmel historic resource under the themes of architectural development, and development of the arts & culture.

(Discuss importance in terms of historical or architectural context	rty Type: single family residence Applicable Criteria: CR3 of as defined by theme, period and geographic scope. Also address integrity.)  Register criteria 3, in the area of architecture, as perhaps the best remaining
half-dozen or so unpainted Craftsman cottages still setting. The quality of craftsmanship is clearly evident shingle roof, and the 1920 (?) glazing of the porch wind clean lines, well constructed masonary work, and the with. He was also careful with the siting of his residence viewsheds, and retaining as much open space as posstudied. Turn of the century pattern books and period must have come from the influx of San Francisco and designers, influenced by Charles Keeler's recent purpowner/builders of Craftsman style homes were making evekend place for Rev. Charles Gardner, Chaplin of St. Gardner had a new home constructed on Mission. How	the fact that it is intact as constructed about 1904, retains its original exterior titing is the exception in Carmel. This appears to be the best of about a standing in the village, and one of the very few in its original landscape at in the residence, whose only changes appear to be a newer composition adows. Typical features of Murphy's Craftsmean design of the period include use of shiplap siding below the floor-plate on the sloping lots he had to deadess, affording ready access to roadways while taking advantage of the best period on the parcels. His design sources for this period have never been dicals like Gustav Stickley's Craftsman Magazine come to mind, but some ad East Bay clients familiar with the evolving work of bay area regionalist sublication of The Simple House. George Sterling and Arnold Genthe as examples available for the young contractor in the village. The house was a stanford University and his family. Upon his retirement in the early 1940s Dr. wever, the original Gardner Hse. remains in the family. The residence clearly 1997 Carmel Historic Context Statement under the theme of architectural

B10: Significance (Continued from Page 2)

When the dome house was completed, Mills moved to San Francisco and joined the firm of Anshen + Allen, until a friend invited him to come to Carmel to help on a residential addition. That led to work with Miles Bain, who contracted to build Wright's Walker House in

The interaction of complex design and simple tools and construction methods remains an important part of Mills' work. His buildings' elegance comes from their aesthetic and structural concepts rather than from expensive materials. He has built more than thirty-five residences throughout California and his office continues in full operation at Carmel. His work honors the process of architecture and offers many lessons to those willing to take the time to track it down and read it.

The Gottfried Hse. is significant under California Register criteria 2 for its associated designer & contrator La Von E. "Lee" Gottfried. Between 1920 and 1924 Gottff Kuster began the transformation of the Ocean Avenue business district from World European appearance that characterizes the commercial core of the vicenstructed the first of the inventive European medieval storybook style shop corner of Monte Verde & Ocean Avenue. While legendary Pine Cone editor Kuster to Carmel's "Hall of Fame" as "the one man responsible for the build Gottfried deserves credit as well. His knowledge of early European building constructed in 1921. He employed Carmel stone, faid in an uncoursed bond, residence the general appearance of a rural medieval reed thached cob co Gottfried served as an Army Signal Corps officer in France during WWI, when types. His use of Carmel stone on his house as a full exterior wall cladding may	ried, in concert with theatrical en in a Western false front vernacu- illage today. Working for and with os in Kuster,s Court of the Golde in and politician Perry Newberry ling of unique and different shop forms is clear from the design under a hipped roof with rolled of tage, that could be found in E	ntreprenuer Edward alar look to the Old th Kuster, Gottfried on Bough at the SE nominated Edward ps in Carmel", Lee of his own house, if eaves, giving the inclined or Erange.

Born in Ohio in 1896, La Von Gottfried attended both grammer and high school before venturing into the business world. Prior to his WWI service he worked in construction and for the Pacific Telephone Company. leaving the service in 1919 he returned to California, and his telephone work in Los Angeles. He moved to Carmel in the Spring of 1920 where he went into general contracting.

B10. One of his first jobs was building a stone house for Edward Kuster at Carmel Point in 1920. Kuster designed the rambling granite edifice inspired by castles he had known as a youth in Germany. Gottfried designed and constructed a number of fine residences and commercial buildings including the Charles Van Ripper, Rhoda Long, and Joseph Schoeninger houses on Carmel Point. The P.K. Gordon House on San Antonio, and residences for the Ritchie and Kenney families at Pebble Beach along with many others. In 1923-24 Gottfried was the contractor for the Court, and Theater of the Golden Bough with Edward Kuster. He had designed and built a small weaving shop for Kuster's wife, the former Ruth St. Denis, on the Dummage property along Dolores St. in 1922. That building was later moved to the Court of the Golden Bough where it continues to serve as a candy store. Gottfried married Bonnie Hale, step-daughter of noted Carmel writer Fred Bechdolt, for whom he constructed the Dolores St. residence. He brought his brother-in-law Donald Hale into his practice in 1922. Gottfried and his wife resided in and worked from the home during the most productive period of his life as a designer and building contractor in Carmel. Although the alterations and additions to the building over time may not qualify it for listing in the California Register in the area of architecture, it still conveys a strong sense of time and place. Lee Gottfried, its designer/builder was a key figure in the context of architectural development in Carmel, especially in the changing architectural expression of the Ocean Ave. business district in the early 1920s. His work with Edward Kuster, introducing the Storybook subset of the Tudor architectural style to commercial building in Carmel opened the door for residential designers like Hugh Comstock and George Mark Whitcomb to create their fairytale residential cottages in the mid 1920s. His home on Dolores St. best represents Gottfried as both designer and builder during his long association with the construction trade in Carmel.

NOTE: The house built for Alan McEwen in 1925, located 5 north of Ocean on the west side of Carmelo (Blk HH, Lots 13, 15), may very well be the work of Lee Gottfried. It not only has the same Carmel stone wall cladding, and hipped roof with rolled eaves, but employs a footprint very similar to that found on the Dolores St. hse. Of interest is the fact that although the designer of the Carmelo St. hse. has not been identified, the stone mason who did the Carmel stone work has. It was Edward Mestres, a nephew of the noted Carmel Mission cleric Monsignor Ramon Mestres. It is possible that Edward Mestres was also responsible for the stonework on the Gottfried hse. on Dolores.

F3. Fenestration is integular w/a combination of rectangular and round- arched fixed and casement type multi-paried wood windows. There are a number of wooden French doors along all sides of the ground floor as well. The residence sits well back from the NW corner of Santa Lucia and San Carlos, behind a thick screen of mature frees and shrubbary w/a large lawn and low plantings. The entry courtyard on the north side has perimeter planting beds w/shr, bbery and flowers. There is a recent wood framed carport, stucco-clad w/a Mission tile roof at the north end of the west wing, projecting east into the driveway. On its south side is a two hundred year old Wolf Pine, that has been recorded as the oldest living example of its type in the United States. The San Carlos side of the property is skreened by mature vegitation, but also has a stucco fence.

B10. Significance: Theme:

Period of Significance:

Architectural Development 1903-1940

Area: Carmel by-the-Sea single family residence

Applicable Criteria:

**Property Type:** (Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The Violet Campbell Hse. is significant under California Register criterion 3, in the area of architecture for its interior Great

Room, designed in 1926 by California master-architect Charles Sumner Greene. The Great Room addition is the only portion of the house that qualifies as historic, as shown on the attached site map. Charles S. and Henry M. Greene are considered the masters of the Arts & Crafts movement in America during the first two decades of the twentieth century. Both studied at the Manual Arts High School in St. Louis, MO, and at M.I.T. before coming to Pasadena, Calif.in 1893. By 1902 they had developed an individual style that culminated in the American Bungalow form. Their master works from the first decade of the century included the David B. Gamble Hse., the Robert R. Blacker Hse., both in Pasadena, and the Charles M. Pratt Hse. in Ojai. Working with local wood craftsmen in Pasadena, the Greenes also designed fumiture and other fittings for each commission. In 1916 Charles left the partnership and moved to Carmel. Business was slowing because of the onslaught of WWI, the proliferation of builders' versions of Greene-inspired designs for the popular market, and Charles' desire to write, and study eastern philosophy. During the twenties Charles architectural output was minimal, with its most outstanding success being the Daniel James House in Carmel Highlands, a commission that lasted form 1918 to 1922. in the mid-twenties Charles did several smaller works, including the Great Room on 13th St. for a family friend, Violet Campbell. The Great Room is medieval in tone, with a low coffered ceiling of dark wood, the coffers rounded at the edges, which was typical of Greene's treatment of large, visible wood members, and a central fireplace, w/stuccoed breast, decorated w/ pressed pattern across the top, facing south into the room, which was lined with multi-paned windows looking out into the side and rear gardens. Charles designed and built the room, with contractors Gottfried & Hale. Outside of the War Memorial along Ocean Ave., and Charles Greene's own studio home around the comer along Lincoln, this is the only known remaining example of this master's work in Carmel. It clearly reflects the findings of, and is consistent with the 1997 Carmel Historic Context Statement under the theme of architectural development.

## P3a. Description:

A tall one-story gabled roof structure with a projecting gabled roof entrance featuring a setback carved teak arched door framed by patterned brick jambs supporting an arched brick overhang. The curved Spanish tiles of the roof and the random placed Islamic tiles set into the brick walls add a distinctive Mediterranean-Renaissance feel to the entire house. The main studio has a huge glass-wired skylight covering the north roof and carved redwood beams that rest on rough stone corbels projecting from plastered walls articulated by wooden cookie-cutter pattern blocks set into the wet plaster. Herringbone pattern oak floors run throughout the studio. A hipped roof wing extends to the south that originally was an office and sleeping area and a small bathroom with carved teak doors and trim is tucked into the south corner of the projecting entrance. Iron tierods are visible to the upper right of the main entrance and the heavy-wire bottle glass is used in the narrow arched windows flanking the main door. Design elements from the James House project are incorporated into the studio. A massive brick chimney rises to the rear of the entrance block and insets into the main studio area just to the right of the roof ridge line. An arcaded brick wall encloses the garden to the south and west of the studio and is entered through a herringbone patterned redwood gate designed by Charles' son Thomas Gordon Greene, who still resides in the studio.

# B6. Construction History:

- 1. Permit #660 9/23 (\$1,100) studio built on Lincoln of used brick obtained from the demolition of the Hotel Del Carmelo located in Pacific Grove in 1919. This was added to an earlier U-shaped plan vertical board and batten cottage, based on the Bandini House of 1903 in Pasadena, that existed in the middle of the lot west of the studio. The cottage stood until 1966.
- 2. Permit #4418 2/24/66 demolition permit of U-planned board and batten cottage, carport, and shed to west of studio building.
- 3. Permit #4438 4/1/66 new residential addition to west of studio designed by Thomas Gordon Greene son of Charles Sumner Greene \$31,500.
- 4. Permit #71-39 4/23/71 carport designed by Thomas Gordon Greene \$1,000.
- 5. Permit #HD95-5 12/18/95 Application for Historic Designation Hearing 1/18/96. Approved 6/13/96.
- 6. Historic Preservation Easement record 9/3/96.

### B10. Significance:

The building qualifies both as a State Historical Resource and a National Historical Resource as the working studio of Architect Charles Sumner Greene from 1923 until his death in 1957. The adjacent cottage was demolished and rebuilt by his son Thomas Gordon Greene and his wife Betty who still reside at the residence. Many of the details such as the doors, interior wooden beams and plaster work reflect Charles' artistic designs that acknowledge the earlier work of the Greene and Greene partnership in Pasadena, while the east façade, the south arcaded garden wall and general mass of the building reflect the direction of Charles' work in the Fleishacker house in Woodside, California (1911), the James House, Carmel Highlands (1918–22), and the Flavin House, Camel Highlands (1929–30). Ironically, the design of the John Langley Howard House in

*Recorded by	Richard N. Janick	*Date 7/20/01	Continuation	☐ Update								

B10. Significance (Continued):

Monterey (1929) reflects more of the U-shaped board and batten design of the original cottage that Charles built adjacent to the studio in 1920 and was demolished in 1966. Also, reflected in the studio detailing are Charles' interest in Medieval English Culture ("the Arthurian Legend – Tintagel Castle") as seen in the stone corbels supporting the massive wooden beams of the living room and references to the spiritual philosophy of Claude Fayette Branden with spiral carvings and vine motifs. Elements of Italian Romanesque details mix with Old Testament scenes carved on interior door panels. Complex symbolic representation became a primary preoccupation in Charles' later work and the studio was a laboratory for design ideas that were applied to other projects. The studio also differentiates the design philosophies of Charles and his brother Henry, who was the more practical, engineer personality in their earlier partnership.

The Charles Sumner Greene Studio personifies the theme of Independent and Eclectic Building design that is one of the chief features of Carmel's architectural history.

CONTINUATION SHEET	Primary # HRI #
Page 3 of 3 Resource Name or #: (Assigned Recorded by: Kent L. Seavey	Y recorder) Louis Ralston Hse.
	Date 10/5/2002

P3. Fenestration is otherwise irregular, w/a combination of single & paired multi-paned steel casement windows, and a few smaller 1/1 double-hung wood sash. Two doors open onto the full-width balcony along the east (front) elevation. A single wood door at the SE cr of the feature, and a pair of wooden French doors, centered in the elevation. The first floor on this elevation has a central entry, flanked by multi-paned steel casement windows on the south side, and one, offset toward the NE cr. of the building. The main doorway is reached by a brick path running parallel to the front elevation, w/ a set of partial width, open brick steps leading up to the level of the doorway. There is also an entry on the north side-elevation, reached by a set of wooden side-approach stairs, leading up to a railed screen of solid screen of mature trees and shubbery, in an informal landscape of climbing vines, low shubbery and potted plants.

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The F.A. Collman Hse. is significant under California Register criteria 3, in the area of architecture as an evolutionary example of design change over time in Carmel's residential architecture. It is also significant as an early prototype of Carmel master builder Hugh Comstock's Western Ranch house style. The building began life in about 1907 as a one-room beach house, designed and constructed by John Galen Howard, Dean of the School of Architecture at U.C. Berkeley. Howard had been vacationing in Carmel with his family since 1902, in rented quarters, then in tentage on the property he purchased on Monte Verde. The Howards spent John's sabbatical leave from Cal in 1916-17 at the Carmel cottage. When Howard went to France in 1918 w/the Red Cross, the family remained in Carmel, turning the cottage into more suitable living quarters by adding a bedroom, dining room, kitchen and bathroom. The Howards had become friends with another architectural family, that of Chas. Sumner Greene, who had taken up residence in Carmel in 1916. In 1923 the Greene's would become the Howards neighbors. The Howard & Greene children were playmates through the late teens and early twenties. An interesting by-product of that friendship was C.S. Greene's design for a home in Monterey for J.G. Howard's artist son, John Langley Howard in 1929. it was Greene's last residential commission, and is still in place, as a Monterey historic resource. By 1927 Clara Taft was the owner of the Howard cottage. Between 1926 and 1929 she had altered, and made additions to the original cottage, employing the services of Carmer's most prominent women designer/builders, Dene Denny and Hazel Watrous. In 1936 a Mr. F.A. Collman, a new owner, hired Hugh Comstock to do extensive alterations to the building, bringing it into its current, rambling Western Ranch House configuration. Sometime in the 1990s an undocumented secod floor was added at the west, and a minor kitchen expansion was completed on the north side-elevation. A 1962 carport, near the NE cr. of the property has been converted into a one-car garage, compatible

B10. The only plans available for the hse, are those prepared by Hugh Cornstock for F. A. Collman in 1936. There is no reference to Mr. Collman in any of the Carmel directories, however a May Colman, widow of F.E. (F.A.?) Colman appears in the 1939 Polk directory. The expansion of the house appears to be from west to east, with the original cottage closer to the Casanova side of the parcel, and its attendant bay views. The 1917 Howard additions look like they were to the east (rear). Clara Taft, also not found in any local directory for the late 1920s, had Denny-Watrous add a partial-width wing to the east, along the SE side of the existing cottage. Comstock widehed and extended this wing in 1936, terminating in an angled bay at the SE cr. of the building that turned the residence a little back on itself, affording more privacy on the Monte Verde side. He also added the wide angled bay on the front (south) elevation.

The continued use of vertical board-and-batten in the evolving development of the house ties it directly to the vernacular character of very early Carmel. It is Comstock's rambling floor plan and more modern notions of fenestration that give the 1936 alteration its Western Ranch House look. His angled bay is wide and narrow, affording a much broader view of the grounds, and his SE bay has very tall, banded windows wrapping around the inside corner of the garden, further connecting the outside with the inside. The house has the feel of Wurster's Gregory Farmhose of 1928, in Scotts Valley near Santa Cruz.

Hugh Comstock was well aware of William Wurster's work at the time, as the Berkeley architect had already completed two residences in the Carmel area, one on Mesa Drive in 1927, and the Converse Hse. on Santa Rita in 1932, and was busy completing the Pasatiempo golf resort in Santa Cruz. By the mid-1930s Comstock was developing his own version of the Western Ranch House, which would be realized later in the decade in his Post-Adobe design and method of construction. Comstock's work toward that end included a series of smaller peaked roof houses, generally found in the 2nd Addition, employing a variety of building materials, including wood siding w/brick and/or adobe veneers. The Collman Hse. is an interesting and useful example of that exploration, with a rich lineage of architectural association. In spite of the 1990's additions, the 1936 Comstock design is basically intact as constructed. The Collman Hse. reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the theme of architectural development.

# P3. Description (Describeresourceand its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

A two-story, wood-framed vernacular Scandinavian style residence, irregular in plan, resting on a concrete foundation. The exterior wall cladding is split wood shingles, 12 inches to weather. With 1 by 12 inch corner boards and belt coursing suggesting timber framing. Heavy, hand-adzed carved posts appear as supports below a projecting bay on the south side of the west -facing facade above a slightly below grade one-car garage, and supporting the shed-roofed door hood above the principal planked wood entry. which is centered in the facade. The side-gabled roof system has minimal overhang at the eaves and a closed soffit. There is one interior brick chimney present, with a tile capped spark arrester. It is located at the edge of the south side-elevation, just below the ridge line in the west-facing roof plane. The roof is covered in composition shingles. Fenestration is irregular, with a combination of multi-paned double-hung wood sash, and multi-paned fixed and casement type wood windows. These appear in single, paired and banked groups. There is one sliding glass door on the rear (east ) elevation. Several window surrounds on the west -facing facade are highly carved in decorative patterns, the work of the original owner, Dr. McCabe, an avid woodworker. The residence sits back from the street in an informal landscape setting of flower beds and shrubbery flanking a small brick patio. It is located in a wooded neighborhood of one and two-story residences of varying ages and styles.

The McCabe house is significant under California Register criterion 3, in the area of architecture, as a basically unaltered example of the traditional Scandinavian vernacular work of architect Lennart Palme, and as a representation of Carmel's ongoing tradition of independent and creative design with a taste for simplicity that transcends the division of time and architectural

The design of the McCabe residence is clearly drawn from the vernacular architecture of Scandinavia, and provided Dr. McCabe, a retired Stanford professor, with an ideal project to persue his hobby of woodworking. The window surrounds on the overhanging bay at the south side of the west-facing facade are capped with mythic Griffins above linked floral motifs, all carved by McCable The small three-arched surround in the fixed window above the entry door are also from McCabe's hand as are numerous interior details of the residence. It is possible that Dr. McCabe's choice for his architect derived from a knowledge of Palme's design of

Architect Lennart Palme (1881-1971) was a native of Stockholm, Sweden, where he studied architecture and engineering at the Stockholm Institute of Technology before coming to the United States in 1923. He settled in Rye, New York building a home of Nordic design. He designed and built Mrs. Knight's Lake Tahoe residence in 1928, and came permanently to California in 1937. His other known Monterey area work includes the residence of Marie Weber in Carmel, also constructed in 1940, and the lodge

Palme's small residence for Dr. McCabe is reminicient of the "Fairy-Tale" designs of Hugh Comstock and others from the 1920s in Carmel, and extends the tradition of that residential building style into the 1940s with a more historically correct interpretation of

P3a. Description:

(Building 1) A one-story adobe lean-to, constructed after 1774, rectangular in plan resting on a river rock and concrete foundation. The exterior wall cladding is a smooth textured lime plaster. The Mission tile shed roof is laid over t&g wood sheathing, carried on pine pole rafters with exposed tails. Fenestration is irregular with fixed and wood casement type multi-paned glazed windows. Two original unglazed windows still exist on the north side elevation. One toward the west is walled from the exterior, but the second still has the original shutters fitted with rawhide hinges and a wood grating. From available historic photographs, it appears that the original entry room was removed by 1870, and the main entry is now found in the east end of the structure. The lean-to was constructed against the existing (1774) garden wall.

About 1921 artist-architect Jo Mora executed a rehabilitation and expansion of the existing structure for Msgr. Ramon Mestres. The work included additional doors and windows cut into the adobe walls, and a floor of fire brick (currently beneath the concrete slab floor) was laid. Juan Martorel, a Monterey stonemason, constructed the massive rough rock fireplace found along the north side elevation, under Mora's supervision. The original interior ceiling beams and vertical wood post supports were repaired and replaced, as needed at this time. Mora was also responsible for the painted decoration on the interior walls. Interior lighting was by branched wall sconces with candles on the walls, and natural light through windows and glazed doors. No serious attempt at electrification in the building took place until 1947.

Father Mestres had intended using the property as a guest house-lodge for visiting dignitaries, however three Carmel women induced him to sell the property, and in about 1924 opened the building to the public as the Mission Tea House. As a result of the stock market crash in 1929 the popular eatery went out of business, and the property was sold to Mr. & Mrs. Lloyd Pacheco Tevis, members of two distinguished early California families.

The Tevis family expanded the existing building(s) over the years of their tenancy. They added separate living quarters for their butler and gardener toward the rear of the property, as well as an art studio for Mrs. Tevis, and billiard room for Mr. Tevis. In the early 1940s, after purchase of an additional acre of mission land, the Tevis family hired Sir Harry Downie, a recognized authority on mission and related architecture, to expand the existing adobe building in keeping with its original character. A new kitchen, dining room and butler's pantry were added west following the long axis of the building. A bath was also added to the back of the dining area, doubling the actual size of the original adobe building. Downie installed one of the first water-circulated radiant heating systems in the country within a new concrete slab floor in the adobe. In 1976 Mr. Lewis H. Scott purchased the property from the Tevis family and has continued careful stewardship of this significant historic property, assuring its return to the Catholic Church after his demise.

(Building 2) A two-story wood framed residence constructed in 1881, irregular in plan resting on a concrete foundation that includes 12" x 12" sleeper beams from the Carmel Mission Church ca. 1812. The exterior wall cladding is a combination of horizontal wood drop siding and vertical board-and-batten. This may be accounted for by the fact that Mission Records show delivery of the original wood was by vessel in Carmel Bay, where the wood was dropped overboard and allowed to float to shore. Because of rough water at the time, almost half of the ordered lumber was carried out to sea. The building takes a traditional barn form, with a central two-story bay and shed roofed side bay to the south. A series of smaller side bays appear on the north side of the building, representing different periods of development. The roof surfaces are covered in wood shake. Fenestration is irregular with a number of multi-paned wood sliders, fixed wood focal windows,

# P3a. Description (continued):

and 1/1 double hung wood sash. Historic research has shown that the two "core" downstairs rooms represent a squatters shack that existed on the site as early as 1850. The rooms are constructed from the whitewashed ceiling boards of the Mission ruins, and are above the 1812 sleeper beams. Of the three bathrooms in the house, that on the north side was probably constructed by Chrstiano Machado, the 1881 builder. The downstairs bathroom was part of the Mission Tea House, with an outside as well as inside entry. The upstairs bathroom dates from the Tevis occupancy. Mission Curator Sir Richard Menn has done extensive research on the interior and exterior finishes, concluding from his work that Machado's fellow Pt. Lobos whaler, Antonio Victorine was involved in construction of the building. Some window changes have occurred during the Scott occupation. The two buildings are connected by a modern, free standing entryway at the east end of the adobe and west end of the frame house.

Other structures or note on the property include a "Ramada" for Al Fresco dining, constructed of adobe (portions of which date to 1800), brick ovens for baking, a gardener's residence, a guest house (the Tevis billiard room and art studio), a small home for the butler and maid, a swimming pool-in ground, potting shed, tool sheds, and a large garage. A portion of the adobe is in use as a chapel and contains a 17th century alter piece of gilded wood from Spain (1607) and is decided to the Patroness of the Monterey Diocese, "Our Lady of Bethlehem" in honor of the original image brought by Father Serra from Spain in 1769 that was once housed here from 1841 until 1881 when it was removed from the Mission Church.

Also of note are the 4 ancient pear trees – the vestige of those planted by Fr. Palou in 1774. The El Camino Real at one time ran parallel to the adobe and frame house on the north side, before it turned into the south gate of the Carmel Mission. It is perhaps the last unpaved section of this famous roadway to be found in California. In 1851 this portion of El Camino was extended west to Martin's Mission Ranch and planted with cypress trees. This section still exists at the north end of "Rio Park" – property of the City of Carmel. The property is well planted with mature trees and shrubbery with a paved patio to the south of the frame house, all enclosed by a high Carmel Stone wall with large paired wooden gates facing Rio Road to the east. The gates are mounted on two Carmel Stone posts, capped with stone urns and flowers.

# **B6.** Construction History

Constructed 1774+/- (adobe); rehabilitated and altered ca. 1921; commercial use 1924–1929; buildings added to grounds 1930–1940; adobe expanded 1940s.

Constructed 1881 (vernacular frame house), bathroom added ca. 1924, alterations after 1929 (second story bathroom known), interior alterations and minor window changes since 1976.

## B10. Significance:

The Mission Carmel Pear Orchard Houses and their setting are significant under CRHR criteria 1, 4 as an excellent example of the evolution of a small agricultural property, one of California's first successful mission gardens, through 200 years of cultural stewardship and adaptive reuse, including service as a popular dining establishment, and as a private residence. The pear orchard property is closely associated with events contributing to the broad patterns of California's history and culture, as well as having great potential for yielding important information in California's history.

B10. Significance (continued):

Rev. Father Francisco Palou established the kitchen garden of the Carmel Mission on a site just below the quadrangle, adjacent to the Carmel River in 1774. An abundance of cuttings of the "little pears of St. John" were planted as well as a smaller selection of apples, quinces and other fruit. *Mission Biennial* reports that an adobe wall was in place to surround the acreage by 1774. A small adobe lean-to structure, with a tiled shed roof, was added near the northeast corner of the orchard to house an orchardist, to care for the garden and run off wildlife. It is probably the oldest European dwelling house in California. The lean-to was of similar dimensions to the structure standing today, excepting for a room at the east end which gave the house an "L" shape. Apparently entry into the building was through this small room, rather than the present entry hall. The small room was demolished prior to 1870. According to Mission Curator, Sir Richard Menn, it is highly probable that the garden served as the location for the formal reception of the Compte de LaPerouse (1786), French navigator and first foreign visitor to California since Sir Francis Drake in 1579. Portions of the "Ramada" in the garden date to 1800, and four of the remaining pear trees are the vestiges of those planted by Father Palou in 1774.

Portions of a vernacular barn-lie residence, constructed by Christiano L. Machado, a whaler from the island of St. Michaels in the Azores, in 1881, predate 1850 and employ materials taken from the ruins of Carmel Mission dating to 1812. Machado's occupancy as an orchardist from 1877 to about 1914 is bound to reveal information important to history about the transition of immigrant Portuguese whale men from shore whaling in California agriculture.

Of particular interest is the period of the first rehabilitation of the adobe house for adaptive reuse ca. 1921. Executed by noted artist/architect Jo Mora the additions, including a massive stone chimney, reflect the perception of what was considered appropriate for historic preservation during the period of the 1920s.

The period 1924–1929, when the property was operated as the popular Mission Tea House by three entrepreneurial women, including Clarabel Haydock, Carmel's first woman mayor, is bound to produce information important to women's history in California.

The era of occupancy by the Lloyd Pacheco Tevis family, beginning in the early 1930s, saw continued changes to the property by the addition of small dependencies, and later additions to the adobe and wood frame houses. These changes, directed in part by Sir Harry Downie, the principal force behind the restoration of California's mission chain, affords further valuable insight in the changing nature of what was considered historic preservation in the 1940s.

The many facets of what may be regarded as the oldest residential property in California cannot help but expand our knowledge of the history and culture of California.

P3a. Description:

The Carmel Mission, as we see it today, is a fusion of an early building plus its early restorations, with twentieth century structures sympathetic to the Mission Style of architecture in California. Only parts of the Mission Church hearken back to the late 18th or even the 19th century, while the remainder of the Mission quadrangle and the nearby buildings are of quite recent construction.

The mission church of San Carlos de Borromeo is constructed of sandstone, faced with sand-colored stucco, and is a simple nave plan, 150' x 29', measured on the inside. The walls are 5 feet thick.

The West façade is an interesting composition of two dissimilar towers flanking a round-arched portal, surmounted by a classicistic trabeation and an interlaced quatrefoil and star window. The North tower is the shorter of the two, and generally serves as a foil to the larger and richer bell tower at the south. It is more simply treated overall, with smaller arched openings. The bell tower, on the other hand, has three openings (two to the West, one to the south) and features baroque finials at the four corners, a setback octagonal drum which carries eight pinnacles, and a dome which is circular in plan, half-egg shaped in section. Surmounted by a wrought iron cross the dome should be seen as deriving from an essentially Spanish-Moorish inspiration.

The interior of the Carmel Mission Church is unique among the Mission Churches in its wooden tunnel vault, shaped in a parabolic arch and spanning 29 feet. The planks forming the vault are supported by three transverse stone ribs carried on pairs of Doric pilasters projecting from the wall, reflected on the exterior at these points by buttressing. (Taken directly from NR Nomination Form 9/4/76.)

# B10. Significance:

The Carmel Mission is significant under CRHR criteria 1, 2, 3, 4 as an excellent, restored and reconstructed example of a California mission, which had the added significance of having been founded by Fra. Junipero Serra in 1770, and having served as the headquarters from which he directed the administration of the expanding mission system until his death.

The Carmel Mission (San Carlos de Borromeo) was established on June 3, 1770, at the Presidio of Monterey, and was moved three miles South to its present site in December 1771. The first structures were temporary: dwellings, storeroom, and a wooden church, as well as an adobe church which we know to have been underway by 1774. This building served Father Serra's needs for no less than 20 years, but in 1793, the present stone church was begun under the supervision of Father Serra's successor, Father Lasuen. It was dedicated in September 1797.

The mission functioned primarily as an administrative center for the whole mission system, until that role was removed to Santa Barbara by Lasuen's successor, Father Estevan Tapis. It never served nearly as many Indians as the other missions, reaching a high of 876 in 1795.

The Carmel Mission was sorely beset between 1818 and 1834 by sickness, death, and depredations of the military. By 1836, the church was almost completely destroyed, and in 1843, only ruins remained. The roof collapsed in 1852, and for the next 30 years, the building remained open to the elements.

Carmel's WWI Memorial Arch is significant under California Register criteria 1, in the area of history as a community's expression of pride in and respect for the 56 Carmelites who served their country in the First World War. It is also significant under California register criteria 3, in the area of architecture as the work of one of Califonia's most notable architects, Charles Sumner Greene (1868-1957). It is one of the very few projects Greene undertook after his move to Carmel from Pasadena in 1916. Charles Sumner Greene and his brother Henry Mather Greene were "most noted for their carefully articulated wood residences." Their influence was widespread, especially in the development of the California bungalow. Biographer Randell Makinson notes, "The Greenes not only charted new courses in American architecture and related interiors and furnishings, but also established higher standards of construction." Charles began to remove himself from the partnership in 1916 because of the proliferation of low-quality bungalows, and a general movement toward "period" revival architectural forms. He was also interested in developing

(Discuss importance in terms of historical or architectural context as defined by theme, period and geographic scope. Also address integrity.) The mission model fronting Miss Emma Williams 1st school house is significant under California Register criteria 1, in the area of history as the oldest and best representitive example of a public art project (folk art) by school children in Carmel. Miss. Emma Williams is credited with opening the first private school in Carmel in 1908. A public school had existed in the village since 1904. Miss Williams was born in Connecticut in 1859. Little is known of her early life and training, except that she was trained as a teacher, and loved her profession. What is known is that in 1906 she was among the colonists who joined Upton Sinclair in his brief experimental co-operative Helicon Hall Home Colony in Englewood, New Jersey. It is probable that she was on staff as the teacher for the fourteen children of the colony. In 1907 Halcion Hall was destroyed by fire, and the colonists were dispersed. Several writers from the group found their way to Carmel between 1907 & 1908. Miss. Williams arrived here in 08' with the Michael Williams family. She was a close friend of, and had taught school with Margaret Williams. Emma soon bought the land on which the Mission model is located, and constructed two buildings. One she used as her first school house, and the other she shared with another teacher, H. Stark. Her original residence is no longer present, and her 1st school house has been altered over time, loosing much of its historic integrity. The Mission model is the only physical reminder of the school and its activities that is still intact as constructed ca 1915.

The generic mission, while roughly approximating the form of the Carmel mission employs none of the distinguishing features of San Carlos de Boromeo's highly recognizable facade. A date of 1912 has been suggested for the folk art piece, but one of 1915 might be closer to the mark.

Mission Model-Miss Williams School

corded by:

Kent L. Seavey

Date 2/10/2002

B10. 1915 marked the celebration in San Francisco of the opening of the Panama Canal with the Panama-Pacific International Exposition (PPIE). At the local level, noted writer Perry Newberry authored and produced the serra pageant, an epic production at the Forest Theater that employed 400 actors at a time when the population of Carmel was a mere 600 people. The pageant drew an audience of 1000, and was so successful that it was staged at the PPIE, with Governor Hiram Johnson in attendance. The events of 1915, in San Francisco and in Carmel, suggest the impetus for the kind of school project the construction of the mission model reflects. Cement was a relatively new construction material on the Monterey Peninsula. Its first known use in the village was in the form of rock-faced cement block for the Carmel Realty Company in 1902. In 1911 Monterey and Pacific Grove began using cement to pave their city sidewalks. It is probable that the material and technical advice for its use for the Mission model came from the the M.J. Murphy construction firm. Murphy's oldest son, Franklin, aged 11 in 1915, was a student at Miss Williams School. Franklin's younger sister model was constructed. It is clear from the choice of material that the Mission model was meant to be a permanant feature of the school property. It remains so today as the only historically intact reminder of Carmel's first private school and a folk art reflection of Miss Williams students work. Miss Williams School mission model clearly reflects , and is consistant with the 1997 Carmel Historic Context Statement under the theme of the development of the arts & culture.

Resource Name or #: (Assigned by recorder)Comstock Hill Historic District

D1. Historic Name: Carmel City D2. Common Name: Northeast neighborhood

D3. Detailed Description (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

This well wooded residential neighborhood abuts the NE edge Carmel's business district along Torres Street. It is characterized by the grid iron street pattern imposed on its southeast rising slope, creating a bowl-like effect with the rising tree canopy framing the narrow meandering streets. The homes in the district are those designed and constructed by Hugh Comstock in his Hansel & Gretel substyle of the Tudor mode. These small, wood framed cottages are either finished in "Comstock stucco", with its admixture of pine needles to the textured finish coat, or vertical board-and-batten. Door and window frames, and in some cases the applied half-timbering are carved along the edges to give the appearance of rusticity and age. Flared eaves and undulating ridgelines with wood shingles evoking patterns of thatch enhance the desired doll house, or illustrated children's book effect. All are set back on their lots from the street, in a natural landscape setting on rising ground or in swales, so few are at the same viewing level, further enhacing their story book character, Particularly the five cottages that comprise the east 1/2 of Blk. 66. There is one contributing residence, a little exuberant verison of the Comstorck Tudors, on the SE corner of Torres & 6th by J.E. Nichols in 1927. Non contributors include two recent neo-Comstocks along the east side of Torres, between the builder's home and "Hansel & Gretel", and one altered Comstock on the west side of Santa Fe, between his studio and "Our House".

Boundary Description (Describe limits of district and attach map showing boundary and district elements.):

The district is composed of the southern half of Blk. 60, west end of Blk 67, and the eastern half of Blk 66, connected along the south side of 6th Avenue. Blks. 60, 67 are bounded by Torres St. on the west, Ocean Ave., on the south, Santa Fe St. on the east (E edge Lots 8.9.10, Blk. 67), and the north edge of Lots 9, 10, Blk. 60 on the north.

#### D5. Boundary Justification:

The boundary encompasses the best preserved concentration of residential buildings by noted designer/builder Hugh Comstock in Carmel-by-the-Sea. It includes his first building ("Hansel"), his own home, his studio and seven residences, all completed within a period of five years, retaining a high degree of integrity and evoking a strong sense of time and place.

D6. Significance: Them@evelopment of Architecture, Art & Culture Area Carmel

Period of Significance 1924-1928 Applicable CriteriaCR2,3 Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

The Comstock Hill Historic District contains the largest concentration of early residential buildings by noted Carmel designer/builder Hugh White Comstock (1893-1950), in Carmel. Outside of Michael J. Murphy, Comstock is the most important early builder in the village. With no architectural training and only basic carpentry skills, Comstock designed, and constructed Carmel's first "fairy-tale" cottage in 1924, as a showroom for his doll maker wife. The storybook cottage was a whimsical caricature of the popular Tudor style, with no straight building lines, including the carmel stone chimneys. Its wood frame was clad with a mixture of plaster and pine needles, troweled over burlap to create an uneven textured surface. Undulating ridgelines, and randomly carved pieces from the door and window casings added to the rustic effect.

D7. References (Give full citations including the names and addresses of any informants, where possible.): Albee, Wm., "Carmel Architecture" undated article, Monterey Architectural Resource Inventory (MARI) archives, Monterey Peninsula College

Recorded by: Kent Seavey	Date 9/10/2001	

P2e. Bounded roughly by Santa Fe St., Ocean Ave., Torres St. and 5th Ave, connected along the south side of 6th Ave to the E 1/2 of Blk 66, bounded by Santa Rita St., Ocean Ave. and 6th Avenue.

P3. Originally platted as part of Carmel City, this area was not well developed until the 1920s when designer/builder Hugh Comstock created his highly popular storybook interpretations of the Tudor architectural style, and constructed at least ten in the area between 1924 and 1928, each highly individual in design, exhibiting a variety of wall claddings, decorative detailing, and steeply pitched roofs. The east side of Blk. 66, includes five houses designed by Comstock in 1928 for developer W.O.Swain. Alterations to the properties have been minor, and most affected by Comstock himself.

D4. The east half of Blk. 66 is bounded by the west edge of lots d & e, where it meets the south side of 6th Ave., the north side of Ocean Ave., the west side of Santa Rita St. to the east, and the south side of 6th Ave. to the north. 6th Ave. runs east/west separating Blks. 60, 66 & 67.

D6. The tiny building struck a chord within Carmel's artistic community and Comstock rapidly found himself in the construction trade Comstock's early work was highly imaginative and individual. He used native materials including Carmel stone, local redwood and hand designed fixtures, and was particularly sensetive to protecting the natural landscape setting with the placement of his buildings. He personally built about 12, houses before hiring unskilled carpenters and training them to work to his specifications. He constantly experimented with materials and developed several aging techniques for roofing and wood floors, as well as a Post Adobe method of construction (1936). The district as defined contains the original doll house, "Hansel", and the adjacent "Gretel", first used as an office. His 1925 home is at the corner of 6th & Torres, with its (1940) Post Adobe wing. His 1927 studio is adjacent, at the corner of 6th and Santa Fe. "The Woods" built for Mary Young Hunter in 1927 is found at the corner of Ocean and Torres, and Elizabeth Armstrong's 1928 "Our House", along the west side of Santa Fe, north of the studio. The five W.O. Swain cottages, "Yellow Bird", "Birthday House", "Fables", "The Doll's House" and "Comstock Cottage" are a half block away, along Santa Rita, between 6th & Ocean. Probably more than other architect or builder, Hugh Comstock defined the architectural character of Carmel with his fairy tale cottages and commercial ildings constructed between 1924 and 1929. To a considerable degree they have set the architectural tone for the village since that ame. The 11 Comstock buildings that make up the historic district represent the full range of his talent during his formative years as a designer/builder. Evidence of his interest in the development of building mateials and practices is visible in these buildings, including one of the first experiments in post adobe construction, as a wing addition to his own house (1940). The residences are in very good condition, and most alterations and changes, where they occur, were the product of their builder, Hugh Comstock. Their continued presence, and state of preservation is a testament to their imaginative design and the quality of their construction. As a body they retain a high degree of integrity as constructed, and convey a strong sense of time and place, and of feeling and association

Resource Name or #: (Assigned by recorder) Downtown Commercial Historic District

D1. Historic Name: Ocean Avenue Business District

D2. Common Name: same

D3. Detailed Description (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

The area represents the core of the historic business district that developed between 1899 and 1940. The commercial buildings primarily consist of two-story reinforced concrete and wood frame buildings in a variety of early 20th century architectural styles. Retail buildings have shop, gallery or reataurant space on the ground floors and office space and residential units on the upper floors. There are also three hotels in the district. Most businesses and shops are constructed to face open sidewalks with interior or exterior courtyards. Numerous alleyways have been tiled or bricked and are landscaped to create pleasant passages between buildings and streets. Architectural design throughout the district tends to reflect preferred residential styles of the era, particularly the English and European medieval revivals, and Spanish Colonial. It includes construction with natural materials, attention to detail and craftsmanship, and provides pleasant urban open spaces and abundant landscaping. The landscaped median divider along Ocean Ave., and the absence of electric signals or parking meters contributes to the village atmosphere that characterizes the district. Notable elements of the district include the Philip Wilson Bldg. (1904), a commercial adaption of the first Bay Area Regional style that served as Carmel's first city hall, and is one of the oldest continually operating businesses in the village; The Preble Bldg. (1902), an early flat roofed "Fireproof" commercial bldg. of rusticated cement block by town builders Powers and Devendorf, for the Carmel Development Company's office: contarctor Hugh Comstock's 1926 Tuck Box tea room, his first commercial design in the designer's distinctive fairvtale Tudor style; the 1927 Andalusian Spanish style El Paseo Bldg, designed by the Oakland architectural firm of Blaine and Olson and built by M.J. Murphy, featuring an interior courtyard with a glazed terracotta sculpture by Jo Mora: the Seven Arts bldg, built for Forest Theater founder Herbert Heron in 1925, of locally manufactured "Thermotile" cement blocks, and housing the first commercial art gallery in Carmel; (see Continuation Sheet)

**Boundary Description** (Describe limits of district and attach map showing boundary and district elements.):

The Downtown Historic Commercial District lines both sides of Ocean Ave between Mission and Monte Verde Streets on the east and west, and includes portions of the west side of Mission, San Carlos, Dolores, Lincoln and the east side of Monte Verde Sts. between the south side of 6th and the north side of 7th Avenues.

D5. Boundary Justification:

The boundaries of the district include the oldest portion of the coré business district. The buildings in this area retain the highest degree of architectural integrity, and overall there are fewer non-contributing intrusions.

D6. Significance: Themarchitectural & Economic Development

Area Carmel-by-the-Sea

Period of Significance 1899-1940

Applicable CriteriaCR 1,3,4

Discuss district's importance in terms of its

historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

The district represents Carmel's downtown business core that had been developed before 1940. The downtown was the center of the economic and social life of the village during the early part of the 20th century. In addition to the basic service support functions provided to Carmel's residents, there were hotels, restaurants and art galleries that targeted the tourist market. Although there are elements in the district that date from the turn of the century, most commercial construction occurred in the 1920s, and was influenced by the architectural revivals of the era, particularly the Spanish Colonial and Tudor modes, which tend to define the district. The open spaces between buildings in the commercial district are an integral and important character defining feature of the village.

D3. the 1938 Bank of Carmel, the only WPA Moderne commercial bldg. in town, with sculptural figure groups in relief on the facade, executed by local artist Paul Whitman, the handsome Tudor half-timbered business block by Dr. Amelia Gates, one of the many fine properties in Carmel designed by women. Hotels include the Pine Inn, the core of which is the 1889 Hotel Carmelo which was moved to this location in 1902 by Powers and Devendorf, and has grown over time to encompass a full city block. The old world European style of the Sundial Court (1930), and the 1927 Spanish Colonial Cypress Inn succeed in mixing medieval and Mediterranean architectural modes into the visual potpourri that embues Carmel's commercial streetscapes with a constant sense of discovery and surprise. The district also includes several non-commercial elements, i.e. the 1927 Harrison Memorial Library, designed by Bernard Maybeck and M.J. Murphy, architect Robert Stanton's 1940 Church of the Wayfarer, with its biblical garden, and Charles Sumner Greene's 1922 WWI Memorial Arch among others.

D5. The significant buildings in the district tend to employ open space, especially as lanes and courtyards in association with building spaces and shapes, to encourage pedestrian exploration and movement. The courts increase the amount of wall surfaces and facades on the buildings, and encourage the creation of additional smaller shop spaces. In this way, historic commercial building design has influenced the land use patterns and economic vitality of the community. This alternative pedestrian circulation pattern is encouraged through the use of arches to define building openings, varied and inviting textures on walking surfaces and decorated directory signs at the court entrances to identify what lies within. The courtyards are often linked from street to street, or from one property to another. Through-block corridors serve as shortcuts for local residents to avoid crowded sidewalks. These unique urban open spaces and intra-block connectors are an important part of the character defining quality of the village, especially when they are associated with significant buildings. Although many of the commercial storefronts and retail spaces have been remodeled over time, individual buildings retain a high degree of architectural integrity maintaining the village feeling of the downtown streetscape. Carmel's Downtown storic District clearly reflects the findings of, and is consistant with the 1997 Carmel Historic Context Statement under the themes of, rehitectural & economic development and government, civic & social institutions.

**NRHP Status Code** 

Resource Name or #: (Assigned by recorder)

Konigshofer-White-Sand & Sea Hist. Dist.

D1. Historic Name: White-Konigshofer Development D2. Common Name: K-W Sand & Sea Historical District D3. Detailed Description (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

The Sand and Sea District is part of a subdivision in Carmel that dates originally to 1900. Parcels 1 to 5, closest to San Antonio and 4th, were developed in 1941 by Elizabeth McClung White, a Carmel real estate agent, with designs for a house on each parcel by architect-designer Jon Konigshofer in an interesting mix of Modern Architecture and Craftsman Tradition details that have been characterized as the Second Bay Area Tradition.

Three of the four contributing buildings are flat roofed. The fourth, on Lot #5, has a low-pitched peaked roof. All are characterized by the use of horizontal wood siding, large, multi-paned, wood picture windows, wide overhanging eaves, horizontal exterior wood siding, large brick chimneys, and a lower wainscot of brick veneer. From the south they appear as unobtrusive elements on the landscape, framed behind an informal line of dense shrubbery on the south side, and a tall stand of eucalyptus trees to the north.

The siting of each house in the district takes into account the topography of the land and is respectful of the sight lines to the sand dunes of Carmel Beach. The individual lots are all irregular in plan, and the houses are situated on stepped terraces to allow each an unobstructed view of the sand dunes and Carmel Beach to the south and west.

The buildings on lots #2 through #5 are contributors to the district. The recent (1972) house on Lot #1 is a non contributor.

D4. Boundary Description (Describe limits of district and attach map showing boundary and district elements.):

Five irregular adjacent lots bound by San Antonio Avenue on the east; north, by an access passageway from San Antonio Avenue and 4th running down to Carmel Bay; south by city-owned sand dunes and beach extending from Carmel Bay to San Antonio Avenue, west by irregular lot boundary lines of lots developed in 1970s sloping toward Carmel Bay.

(Continuation Sheet)

### D5. Boundary Justification:

The district includes Lots #1 thru #5 of the Sand & Sea Subdivision of 1941. It is bounded on the north, and northeast by N. San Antonio Road, and a private residential parcel, on the west by the Patterson Subdivision of 1972, and on the southwest and south by the public lands of the City of Carmel-by-the-Sea. The district includes only those lots of record noted above.

D6. Significance: Theme Architectural Development in Carmel Area Carmel-by-the-Sea

Period of Significance 1880-1941 **Applicable Criteria** CR#3 Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.) The Konigshofer-White Sand and Sea District is significant under California Register Criteria #3 in the area of architectural development as a district of four intact houses designed by architect Jon Konigshofer for Real Estate Agent Elizabeth McClung White in 1941. Originally five distinct houses (two with detached garages) were designed. Only the two-story garage of Plot #1 was built, and a house was later added in 1972 by architect Warren Thompson. The other four houses, # 2, 3, 4, and 5 were all built and have had virtually no modifications. The blending of modern architectural materials with the natural site, the use of open plans and minimum maintenance were all important factors in the designs which are part of the Second Bay Area Tradition that was celebrated in Sunset Magazine and popularized by such architects as William Wilson Wurster, Harwell Hamilton Hamis, Henry Hill, Clarence

- D. 6. Significance (Continued from Page 2)

Mayhew and Gardiner Dailey, all of whom built houses in Carmel from the 1930s to the 1960s.

The Bay Area Tradition was coined by critic Lewis Mumford in an exhibition about Bay Area architecture in 1949 at the Civic Center Museum in San Francisco to describe the fusion of Modern Architecture materials and processes with the aesthetics and planning principles of the Craftsman Movement. The E.M. White houses by Konigshofer are perfect examples of this new genre that saw the new modest flat roof open plan houses become the heir of the single-wall gabled roof Craftsman Cottages of the 1920s and 30s. Eighty percent of the original development is intact which meets District definition standards, and the designs meet the criteria for architectural development as stated in the Carmel Historical Context Statement of 1997.

#### JON KONIGSHOFER

Born in Alameda, CA on January 13, 1907, Jon received his basic education locally. He spent two years at the University of Oregon prior to a stint as a merchant seaman that took him to New York. While in New York, he studied at the Art Students League with the view of becoming a magazine illustrator. Konigshofer had also studied design at the Oakland College of Arts and Crafts under Xavier Martinez and Hamilton Wolfe, supporting his studies as a draftsman with a local architectural firm. He came to Carmel in 1937 where he went to work for M. J. Murphy as a designer. He soon left the firm to strike out on his own.

He worked on the design of John Gardener's Tennis Ranch in Carmel Valley and remodeled the Pine Inn for Harrison Godwin and the LaPlaya Hotel for Fred Godwin. His first house design was for J. D. Greenan in 1938, a ranch style overlooking Mission Fields. His second design was for Marie Spreckels Elezalde. He did a lot of work at Pebble Beach including Big Crosby's house. In 1941, when Hollywood producer John Nesbitt brought in Frank Lloyd Wright to design and build a home for him in Pebble Beach, Jon Konigshofer was selected to supervise the project. Unfortunately, the building was never constructed, the principal reason being Wright's unwillingness to provide Nesbitt with a firm cost estimate for the building and the beginning of World War II.

Although never licensed as an architect, Jon Konigshofer's residential designs drew much attention and many were published in leading popular and professional journals in the late 1940s and 1950s. His work appeared in "Architectural Forum," "The Architectural Record," "House Beautiful," "Sunset," "House and Garden" and yearbook of the Encyclopedia Britannica.

in March of 1952, "Life Magazine" featured his "Hillside House" as affordable residential housing under \$10,000. Konigshofer's knowledge of Wright's concept of the Usonian House is clearly evident in his own designs. Jon Konigshofer is credited with at least 50 homes in Pebble Beach and more than 150 buildings, residential and commercial, on the Monterey Peninsula.

Elizabeth McClung White worked in the real estate business in Carmel as early at 1922 and particularly for Coastal Properties in the 1930s and 40s. She was also at one time an assistant manager of the Mission Ranch. A medical scholarship at the University of Virginia exists in her name.

The Konigshofer-White-Sand & Sea District clearly meets the criteria under architectural development as stated in the Carmel Historic Conte Statement (1997).

## P. 3 Description (Continued from Page 1)

The siting of each house in the district takes into account the topography of the land and is respectful of the sight lines to the sand dunes of Carmel Beach. The individual lots are all irregular in plan, and the houses are situated on stepped terraces to allow each an unobstructed view of the sand dunes and Carmel Beach to the south and west.

Four of the originally planned five houses were constructed according to the drawings on file with the Carmel Planning Department, and have little or no evidence of alteration over time. Two detached garages to the north have been modified. A fifth house, originally planned for Lot #1 only had its garage base built. In 1972 a modern residence was constructed on the site, which is listed as a non contributor to the district.
